I'm also not really happy about the idea of making my learning so public and give a lot of negative feedback to students. One of my key fears is giving negative feedback or not giving it to students when they ask for it, and I don't want to put that in my writing. But since writing is more than a link to an online document, I feel like I'm missing out on something. I don't want to learn myself, I want to learn in the most efficient way, and I have the feeling that giving feedback is a very effective way of learning. As a result of the dilemma I found myself in, I wanted to give my students a challenge: 'how can I give feedback as efficiently as possible and still maintain my reputation as a teacher who is fair, and as a respectable instructor?' To do this, I have to reflect on my instruction. I do not teach exactly what I would like to teach, but what I have been asked to teach by the studio instructor and management. For instance, a friend of mine told me that her professor made her do a work by her mentor. I'm currently working with a group of students who are trying to create a suite of music software. A possible solution is to include a feature for providing feedback in software while the students are working. I can do that for them when they are working on their own project, and I can then give them feedback and ask them to share their work with me. I'll also try to make sure that the software and the examples I provide are the kind of work that I would want to develop myself. I don't want to make students work on a project that I could do myself, and I don't want them to feel that they are learning from the students who haven't accomplished the same work. That way, I can make sure that my students learn from my own work and they learn from the work of students that are part of the project. I'm not sure if that's enough to maintain my reputation, but it's a start. ## 6. References Arendt, H. (2008). Einführung in die akademische Musikpraxis. Stuttgart: Klett-Cotta. Dale, R.
