Electronic Projects For Beginners By A.k.maini PDF21 DOWNLOAD: Creating a New Blog In Wordpress – 13 Easy Steps This is part of a series of blog posts on how to build a new WordPress site. To get the basics down, here is a video tutorial. Content on any new site should be added in stages, and never all in one fell swoop. New content adds a lot of value to a site, but it can also be a danger if not well thought through. It can be a hard balance to strike. In this series of posts, we'll take you through the basics of building a new site, from creating a plan, to writing blog posts, to promoting the site to search engines, and finally, building the design. In this post, we'll take a look at the basics of how to create a new WordPress site, starting with the creation of a plan. 1. Get Set Up Our first step is to make sure that we're all set up for the process. Start by updating to the latest version of WordPress. For this tutorial, we'll be using WordPress 4.9.2, but there have been some recent changes that will help keep you on top of things. There's a download link at the end of this post that will get you up and running, but if you just want to use our version, feel free to clone the repo from GitHub. 2. Create a Plan For a new site, you'll want to start by thinking about the types of things that your site will contain. This is a really important step. Thinking through your site plan will help keep your site focused, and will help avoid creating an unwieldy site that's hard to manage. You'll be able to make sense of this list more easily later on, so it's a good idea to make one, even if you'll change it later. Start by thinking about: – The About page – The Contact page – The Pricing page – The Services page – The Blog page – The Post page – The FAQ page – The Gallery page – The Pricing page – The Services page – The Contact page – The About page – The FAQ page – The Post page – The Pricing page – The Pricing page – The About page – The About page – The Pricing page – The Contact page – The About page 520fdb1ae7
