Introduction {#sec1\_1} ===== Ectopic meningiomas are rare lesions and may present as a retroperitoneal or subcutaneous mass. The etiology of an ectopic meningioma is unknown. In children, they are more common than in adults. The prevalence of subcutaneous or retroperitoneal meningiomas in children has been reported to be approximately 0.4--1.7% \[@B1], \[@B2]\]. There are only a few reports of retroperitoneal meningiomas in the pediatric age group, and these have been reported to be from 3 to 7 years of age \[@B3], \[@B4], \[@B5]\]. To the best of our knowledge, ours is the first case of retroperitoneal meningioma in a 2-year-old child. Case Report {#sec1\_2}

===== A 2-year-old girl was admitted to the pediatric emergency department of 520fdb1ae7
