

Real-time visualisation for events

Technical setup ideaVJ

See here a [video](#) on 'how ideaVJ works'.

What the ideaVJ needs for a show:

- Minimum of **two large screens**
 - one for the presenter (content)
 - and one for the ideaVJ (visual context)
 - For larger events (200+ people) please provide multiple screens
- **HDMI cable** (connecting directly to the projector / screen)
- Audio connection (for computer sound output) via **mini-jack**
- A table / working space of minimum 3 meters x 70 cm
 - The ideaVJs stand behind this table
 - This table is preferably **located at the side of the stage**, so that ideaVJ can see the screens, speakers & audience
- Minimum 3 power sockets: **230V**
- **Internet connection** (preferably via UTP, otherwise good (dedicated WiFi))
