For example, did you know that oasis bottle filler retrofits some Sunroc and Elkay units? Or that there are other antimicrobial parts available besides the bubbler and bubbler button? I. Common Oasis Water Cooler Repair and Troubleshooting Information #1 Most Common Cause of Water Cooler Problems: According to Oasis Technical Support, the most common cause of water cooler problems is a dirty condenser. Oasis recommends taking a look at the condenser and make sure it is clean. A dirty or clogged condenser can affect the thermostat, resulting in water being either too hot, too cold or frozen. The condenser is located on the upper right side of the water cooler. One way to check if the condenser in your water cooler is clogged is to put your hand on top of the cooler. If the cooler is hot to the touch, then this is an indication that the condenser is dirty. How to clean condenser: To remove dirt and fluff from the condenser, unplug the power cord and then clean the condenser with a small hard brush without wire or vacuum cleaner connection brush. Oasis recommends inspecting the condenser every 3 months. Why is it that cooler still not cooling (condenser is clean and works); The fan and compressor can also cause the water cooler not to cool properly. Make sure that both the fan and compressor are working properly. If both the compressor and fan are not running, the thermostat or a bad service cable could be the culprit. Oasis suggests making sure that the two thermostat drives are connected to the inner gold colored tabs. If connected to the silver or outer lead, the switch will blow because this is the terminal ground. If only the compressor does not work, the cause could be open currents, relays, overload, and or start/operate capacitors. If both are running and the water cooler is not yet cooling, contact Oasis technical support for more help. When should the water control cartridge be replaced? The top 3 signs that the water control assembly cartridge needs to be replaced: The water will not close (water dribbles from the bubbler head) Water leakage from the unit going to the floor The water pressure will not adjust How to replace the water control cartridge in the P8AC Oasis Water Cooler Remove the two screws located at the top of the front panel. Loosen the two screws at the bottom of the front panel. Remove the front frame. Turn off the water at the stop. Locate the cartridge screws under the front nose. Loosen the two cartridge socket screws located in the middle underside of the cooler. Drop the cartridge holder from under the frame to make it accessible. Use the key key or needle nose pliers to remove the holding nut in the cartridge. Remove the retaining nut (note that there will be a small amount of stationary water in the socket. Remove the cartridge. Insert the new cartridge. (Note that when inserting the new cartridge, the holes in the cartridge and case must be aligned to fit correctly). Nut restraint screw back. Push the cartridge back into place and tighten the two cartridge socket screws. Open the water again. Check and adjust the height of the water if necessary. Reinstall the front cover and tighten/replace the screws at the bottom and top of the front. \*Note that vandal-resistant models will have different current height adjustment directions. How to adjust the flow height in a P8AC unit Locate the cartridge adjustment hole under the front nose. It's in the middle, located between two screws. Use a flat head screwdriver to adjust the height of the current. Turn the cartridge screw clockwise to increase the height of the flow or turn the to reduce the height of the current. \*Note that vandal-resistant models will have different water control cartridge replacement directions. How to reset malfunctioning Oasis electronic bottle fillers To restore electronic bottle fillers (including board and sensor), simply unplug the unit for a few minutes, and then plug it back in. Electronic bottle filling units should be reset when any of the following malfunctions occur: The bottle does not distribute water The filling material of the bottle does not close The electronic sensor must be recalibrated The electronic display is irregular II. General Oasis unit questions Where can I find the model number of my Oasis consumption sources? Oasis model numbers are located at the bottom of the faucet, water cooler, or bottle filler. The model number can be found more often on a sticker located at the bottom of the frame on the outside. Is there an antimicrobial option for water cooler finishes? Yes, some Versacooler units are available with antimicrobial parts. Antimicrobial parts available include the pelvis, front nose, and buttons. Note that the standard bubbler and bubbler button (when manual) that accompany all units is antimicrobial. Are Oasis units available in heavy duty stainless steel? Yes. Some versions of Oasis water coolers are available with heavy duty, 14-gauge stainless steel. Note that this option is only available for vandal-resistant style units. In what configuration does a two-level Oasis drive come in terms of installation, and can be installed the opposite way? Oasis split level (also known as two-level) units arrive in packaging ready to be set up with the right side high, left side low. When two-level units include a bottle filler, the bottle filler comes ready to be installed in the lower left unit. These units can be converted to the right side high, left side low without additional parts required. Changes that need to be made to install the unit in this configuration include: Move the table from side to side to hide the hole in the table. Waste or rear drainage pieces must also be changed. Note: the compressor must remain on the right side regardless of the configuration selected. Does Oasis have retrofitting bottle filling kits? Yes. There are two add-on bottle filling options: a manually activated bottle filling retrofit (Oasis PWSBF model) and a sensor activated bottle filling retrofit (Oasis model PWEBF) Which water coolers can be retrofitted with an Oasis bottle filler? Oasis Units: Oasis PG8AC, P8AC, and P8AM model water coolers (and their variants) can be made into water filling combination units. Sunroc Units: Oasis filling kit can also fit Sunroc ADA8AC units, as well as some older units of the Sunroc ADA series (e.g. Sunroc model number: ADA8) \* Note that when retrofitting an older Sunroc style, you should have an additional flange for the Oasis retrofit kit. The is oasis model: 036689-101. Elkay Units: Oasis bottle filling retrofit kit can also fit Elkay Series EZ or LZ units. When retrofitting Elkay EZ or LZ units with an Oasis bottle filler, you should purchase an additional flange. The flange is oasis model: 036689-201.
