

“Revolutionizing Elderly Care: The Impact of Carebidet's Intelligent Toileting System”

As we navigate the complexities of aging, the need for comprehensive toileting care becomes increasingly apparent. Whether it's at home or in an institution, individuals often require assistance, and caregivers play a crucial role in maintaining hygiene and dignity. In this real-life experience, we delve into the transformative impact of the Carebidet's Complete Intelligent Toileting System (CITS) on the lives of elderly patients.

In the case of a 92-year-old woman, bed-bound, incontinent, and under hospice care, the Carebidet revealed astonishing insights. The system's monitor displayed an unprecedented 19 excretions from 4 PM to 8 AM, emphasizing the relentless nature of caregiving responsibilities. To match the efficiency and hygiene provided by Carebidet, a caregiver would need to be vigilant around the clock, ready to intervene within seconds of each observed event. The impracticality and immense strain on resources highlight the revolutionary nature of the Carebidet.

To illustrate the point, one might consider the creation of a 'specialized excretion nurse' dedicated to monitoring and attending to the patient's needs 24/7. However, such a level of specialized care comes at a staggering cost—approximately \$18,000 per month. In contrast, the Carebidet offers unparalleled value at a mere \$30-\$40 per day, providing not only cost-effective but life-changing and life-saving care.

Healing Wounds

In another compelling case study involving an 83-year-old woman with a Class IV Pressure Injury (PI), the Carebidet showcased its extraordinary capabilities. The woman's son, a doctor himself, was convinced that his mother's condition was dire and reached out to Curaco for assistance. The application of the Carebidet, especially during overnight hours, almost acted as an extension of the medical team, providing care that surpassed the capabilities of human caregivers.

The feedback from staff and medical professionals during this time emphasized the Carebidet's unique ability to remove all excretions within seconds, eliminating any contact with the wound area—a level of care deemed unattainable by the human staff. By August 2023, the once uncontrollable Class IV Pressure Injury had transformed into a nearly completely healed Class I PI, showcasing the system's potential to address and even reverse severe medical conditions.

It is important to note that more people succumb to Hospital Acquired Pressure Injuries (HA-PIs) annually than to car accidents, breast cancer, or AIDS. The Carebidet's role in preventing and healing such injuries not only improves the quality of life for patients but also addresses a critical healthcare challenge.

In an era where the aging population is increasing, innovative solutions like the Carebidet's Complete Intelligent Toileting System are crucial for revolutionizing elderly care. The system's ability to provide unparalleled hygiene, efficiency, and cost-effectiveness positions it as a game-changer in the realm of caregiving, offering a lifeline to both patients and their dedicated caregivers.
