I tried to use the django documentation here. Here's my code snippet. class UserMedia(models.Model): media = models.ForeignKey('Media', on_delete=models.CASCADE) user = models.ForeignKey(User, on_delete=models.CASCADE) date_added = models.DateTimeField(auto_now=True) date_modified = models.DateTimeField(auto_now=True) class Media(models.Model): file = models.FileField() url = models.URLField() poster = models.ImageField(null=True, blank=True) QuerySet works for Media.objects.filter(user=self) But for Media.objects.filter(user=self.user) and Media.objects.filter(user=self.user, file__isnull=False) the.filter method returns an

empty QuerySet. Now I want to get the files for the files that are uploaded by the users. So I want something like this
Media.objects.filter(user=self.user, file__isnull=False).annotate(n=Count('file'), sum=Sum('file__file_size'),
max_file_size=Max('file__file_size')) But it is not working. I am getting the error File "C:\Users\kiran\Desktop\Web\sounds\
520fdb1ae7
