p6b4f991-13 | 8/25/2019 13:51:22 AM So this seems to be the job itself being run. However, when I query the job on the cube instead of on the SQL Server Agent Service itself, it returns the following error Failed to retrieve the Job Information in the specified database 'xxxxxx' in job 'xxxxxxx'. (Error = 54) Has anyone experienced this? Any idea what I might be doing wrong? UPDATE Output from a "query-dw" (query database work) session: EXECUTE sp\_query\_store 'xxxxxxx','000' DROP PROCEDURE [dbo].[xxxxx] GO EXECUTE sp\_dwh\_drop\_database CREATE PROCEDURE [dbo].[xxxxx] AS BEGIN SET NOCOUNT ON 520fdb1ae7
