Each age section covers the physical, cognitive, emotional and social changes children experience, as well as the epidemiology of dental diseases at this age. Other chapters explore screening, treatment planning, radiographic problems, prevention, trauma, restorative dentistry, cellulose therapy, orthodontics and behavior management of each age range. Nine chapters are now in full bloom, providing more information - especially in oral pathology and aesthetic chapters. The revised sedation guidelines for paediatric patients (presented at the AAPD meeting in May 2004) are reflected, so that practitioners remain relevant on pain and anxiety management issues. The latest information on the assessment of risks as a result of actions in the field of human life is included (revised by the AAVD in 2002). Text box spotlight themes of interest, such as tobacco use, Alternative ! Restorative treatment and cleaning methods for children with special needs. Coverage includes proactive guidance, an innovative approach to preventive dentistry - this proactive development-based counseling system focuses on needs at some point in life. The coverage of orthodontic diagnosis and treatment situations is expanding, and more illustrations are being shown that give readers examples of clinical scenarios.
