Traditional Craft.
Timeless Design.
Endless Possibilities.

Production Process

Step 1: Customizing colors and divider molds and pressing molds based on orders.

Step 2: Insert divider molds into pressing molds. Then pouring the prepared colors into the pattern divider chambers as designs.

Step 3: The pattern divider to be removed and then the first coat will be covered with another two layers of dried mortars and humidified one as basement.

Step 4: Put whole mold into 120-ton hydraulic pressing machine for a while.

Step 5: The tiles to be removed from molds carefully by the craftsman.

Step 6: After 24 hours of curing in clean open air areas, tiles will be dipped into water tanks.

Step 7: The tiles will be cleaned and taken out to cooling rooms and put on drying racks for 3-4 days for being dried enough before waxing and packing in carton boxes for loading. A serious quality control on every piece will be conducted in this step.
