only give me the first 2 numbers and then they dont find the serial number in my registry where the serial number of my windows is A: Get-WmiObject Win32_Product | ForEach-Object{ \$Serial = Get-ItemProperty HKLM:\SOFTWARE\Microsoft\Windows NT\CurrentVersion\ProductId -Name "SerialNumber" \$Serial } *Checks if SerialNumber property exists in HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\ProductId registry key Q: How can I be friends with a jerk? In a small group of players, I've recently been paired with a player that seems to only play to win. We're playing D&D 3.5, a game where both parties have a choice of 3 actions during the rest of the round. At the moment, we're at an impasse. Our strategy has been to agree beforehand on the course of actions, and everyone playing assumes the same course. But he has broken that agreement by simply not playing the intended course. I've been trying to keep my comments to a minimum, but I feel like I can't keep quiet about the issue. We're playing Pathfinder right now, which tends to encourage aggressive tactics from both parties. How can I best approach this situation? What you're describing sounds like simultaneous turn-based games in general. It's likely that you're not seeing the same result because that's what you're used to, where you and the other player are each playing a turn before the other, and there's an interplay between turns. That means the game as you've played it is being played out in real time, and the "real" (non-turn) time between your actions isn't a "rest" and therefore doesn't happen simultaneously to the other player's action. You can attempt to ask for his permission to try a different approach, or ask for an alternate turn (I'm not sure of the Pathfinder rule in question). But really you can't force him to do something. And if he just "disagrees" (which may not even be the right word) you're unlikely to be able to get him to change. But there may be something 520fdb1ac7
