## Adventureworks database query exercises

Downloading the adventure work database request exercises PDF and ashvino Ashvin, I assume you've been here already: imho, it's worth your time to explore the circuits: (v'sql.100).aspx Schemas in AdventureWorks (v'sql.105)..... Northwind is also used in MS tutorials. download: Ashwin, there are no shortcuts to learning this ... You'll have to do the job. Learn 'L Server you can use books such as: Microsoft® 'L Server® 2012 T-'L Basics You can find many non-MS tutorials, some you have to pay to use: you can also consider to attend the course. learn to do is learn, if you really want to learn, you have to do, and do, and do... How is the famous question: How to get to Carnegie Hall? and his famous answer: Practice! AFAIK, there is no easy way for you. one of the options, here in forums.asp.net year, through the server 'L, 'L Server Express, and 'L Compact Edition, and/or on other forums like stackoverflow, you can explore many questions and answers ... however, as the learning process, imho, it is too random and ergo, is unlikely to be terribly useful to almost anyone. YMMV. This data is based on microsoft's AdventureWorks database. Версия доступна: AdventureWorksLT.mdb Клиент (CustomerID, FirstName, MiddleName, LastName, CompanyName, EmailAddress) CustomerAddress (CustomerID, AddressID, AddressType) Адрес (AddressID, AddressLine1, AddressLine2, City, StateProvince, CountyRegion, PostalCode) SalesOrderHeader (SalesOrderID, RevisionNumber, OrderDate, BillToAddress TaxAmt, Freight) SalesOrderDetail (SalesOrderID, SalesOrderDetailID, OrderTy, ProductID, UnitPrice, UnitPriceDiscount) Продукт (ProductID, Name, Color, ListPrice, Размер, Вес, ProductModelID, ProductCategoryID) ProductModel (ProductModelID, Name) ProductCategory (Продукция)CategoryID, ParentProductCategoryID, Name) ProductModelProductDescription (ProductModelID, ProductDescriptionID, Культура) ПродуктВзрачение (ProductDescriptionID, Описание) схема:Приключение Показать СопрануName для Джеймса Д. Крамера SELECT CompanyName от клиента ГДЕ FirstName'James' И MiddleName 'D.' И LastName'Kramer' SELECT CompanyName от клиента, где FirstName'James' И MiddleName'D.' И LastName'Kramer' Показать все адреса, перечисленные для 'Модульные системы цикла' SELECT CompanyName,AddressType,AddressLine1 от клиента JOIN CustomerAddress ON JOIN Address ON (customerAddress.addressID-address.addressID) WHERE CompanyName'"Modular Cycle Systems' Select CompanyName,AddressType,AddressLine1 FROM THE JOIN CustomerAddress ON (customer.customerID-CustomerAddress.CustomerID) JOIN Address ON (CustomerAddress.addressID-Address.Address.AddressID) Made By CustomerID 635 SELECT OrderTy,Name,ListPrice from SalesOrderHeader JOIN SalesOrderDetail ON SalesOrderDetail.SalesOrderDetail.SalesOrderID - SalesOrderHeader.SalesOrderID JOIN Product ON SalesOrderDetail.ProductID-ProductID ,Name, ListPrice from SalesOrderHeader JOIN SalesOrderDetail ON SalesOrderDetail.SalesOrderDetail.SalesOrderID - SalesOrderHeader.SalesOrderID JOIN Product ON SalesOrderDetail.ProductID-ProductID WHERE CustomerID=635 Hello People We are back and continue with the third part of the series. 1) Receiving customer orders As a first step to creating an invoice report, write a request that returns the company's name from the SalesLT.Customer table, as well as the order ID for sale and the total volume to be presented in the SalesLT.SalesOrderHeader table. SELECT c.CompanyName, Salesorderid, TotalDue FROM SalesLT.Customer AS c JOIN SalesLT.SalesOrderHeader AS oh ON oh.CustomerID and c.CustomerID; 2) Getting customer orders with addresses Expand customer order request to include a Head Office address for each customer, including a full address of the street, city, state, state or province, postcode, as well as country or region Please note that each customer can have multiple recipients in the SalesLT.Address table, so the database developer has created a SalesLT.CustomerAddress table to make lots and lots of customer relations and addresses. Your request will include both of these tables and filter the affiliation to SalesLT.CustomerAddress so that only the addresses of the Main Office are included. SELECT c.CompanyName, a.AddressLine1, ISNULL (a.AddressLine2, '') AS AddressLine2, a.City, a.StateProvince, a.PostalCode, a.CountryRegion, oh. Salesorderid, TotalDue FROM SalesLT.Customer AS c JOIN SalesLT.SalesOrderHeader AS oh ON oh.CustomerID - c.CustomerID JOIN SalesLT.CustomerAddress AS CA ON c.CustomerID and ca. CustomerID And AddressType = 'Home Office' JOIN SalesLT.Address AS a ON ca. Address ID - a.AddressID; 3) Get a list of all customers and their orders The Sales Manager wants a list of all the client companies and their contacts (name and surname), showing the order ID for the sale and the total bill for each order they placed. Customers who have not placed any orders should be included at the bottom of the list with NULL values for the order ID and the amount. Select CompanyName, FirstName,LastName,SalesOrderID,TotalDue from SalesLT.Customer sc left to join SalesLT.SalesOrderHeader soh on sc. Customer ID'soh. CustomerID order from SalesOrderID desc 4) Customer list without address Sales Officer noticed that Adventure Works does not have address information for all customers. You must write a request that returns a list of customer documents, company names, contact names (name and surname), and phone numbers for customers without an address stored in the database. SELECT c.CompanyName, c.FirstName, c.LastName, c.Phone FROM SalesLT.Customer AS with LEFT JOIN SalesLT.CustomerAddress AS CA c.CustomerID and ca. ClientID WHERE ca. Addressid IS NULL; 5) Get a list of customers and products without orders Some customers have never placed orders and some products have never been ordered. Create a query that returns a customer ID column to customers who have never placed an order, and a product data column for products that have never been ordered. Each row with a customer ID must have a NULL product ID (because the customer has never ordered the product), and each product ID series must have a NULL customer ID (because the product has never been ordered by a customer). SELECT c.CustomerID, p.ProductID from SalesLT.Customer AS c FULL JOIN SalesLT.SalesOrderHeader AS oh ON c.CustomerID . CustomerID Full JOIN SalesLT.SalesOrderDetail AS od ON od. SalesOrderID - . SalesOrderID Full JOIN SalesLT.Product AS p ON p.ProductID - od. ProductID WHERE. SalesOrderID is NULL ORDER BY ProductID, CustomerID; Hello everyone, I'm trying to find out Sql and downloaded the Adventureworks database. Does anyone know where I can find exercises for Adventureworks Requests to learn Sql? Page 2 7 comments It's been a few days since the server 'L ... Continue reading It's been a while since I published Day 1 questions and I think it's time to get the opportunity to give out the answers I came up with. This does not mean that my solutions are the only ones possible, and in some cases I will give more than one answer with different approaches .... Continue reading On the first day of this journey we will be working on the most basic statement I can think of, SELECT statement. Exercises grow in complexity, from the most basic to others a little harder where you get data from more than a table in ... Continue reading I did not plan to write this post because there are tons of resources available on the Internet, but since I want to create a comprehensive series of exercises, starting with the most basic, I understand most people interested in their implementation may be limited ... Continue Reading Hi there! Welcome aboard, you are the candidate we have chosen to cover the junior DBA opening. Sounds good? Ideally, it really doesn't matter if you have knowledge of relational databases, because here I will try to cover most of...
