Bt home hub 5 manual firmware update

Unlock v1/v1.5 BT HomeHub for any step-by-step instructions from the BT HomeHub update provider to Speedtouch7G v6.1.9.6. The effect of this is to make the router unlocked and can be used on any provider. You should be on firmware 6.2.2.6 (available on this site) Prepare to install a static IP Go to the qgt; control panels of the qgt; connect to the local connection area - (right click)- Properties Click on the Internet Protocol button (TCP/IP) to highlight it and then click on the Properties button. · Click on the option to use the following IP address and type the following into the boxes. o IP address: 192.168.1.100 o Subnet Mask: 255.255.255.0 o Gateway default: 192.168.1.254 Click Good and then OK. Unpack folders containing firmware updates to the root of the disk, such as C: to prevent long address lines and the likelihood of error. Connect HomeHub to your computer with an Ethernet cable (disable PC Wifi radio). · Turn off the Connect firewall to HomeHub power. · Press and hold the Wireless Association button on the back of the Homehub until all the lights glow at the top of the hub (about 12 seconds until it clicks). · Go to the BT HHub ST7G folder - New provider. · Double-click on upgradeST.exe Click on the Next Let the Master discover your HH. When you press the Next button, you'll be asked to log in to the router. o Entry: Administrator o Pass: Administrator Click on the Have Drive button and find the MYAA6.196.bin file that you unpacked earlier. · Click Next. · Tick Yes, I'm sure the box then click the next button and let the update run. If all goes well, you'll see the firmware loaded onto the router and then installed on the router. · It can ask you for new login details just click CANCEL - Ignore the error message. · Click Good and close the wizard. Confirmation of Telnet firmware (optional). · Go to the qgt; run... and enter telnet 192.168.1.254 then click GOOD. · Log in using the same login data as before... o Entrance: Administrator o Pass: Look at the text, and if you see 'Speedtouch 7G' and 6.1.6.9 in the top right corner, then you've SUCCESSFULLY updated the firmware of your HH and can now proudly call it 7G. · The type of exit automatically and then click Good and Good again. Connect to the Internet (easy to set up) Connect HomeHub to the ADSL line and to your PC via the Ethernet cable. · Power on HomeHub and allow the lights to settle. · Open your web browser and point out you will be asked to set up my SpeedTouch. · This will prompt the Easy Setup page (Select service: Route PPP, and then click the Next VPI/VC) Select 0.38 button from the list and 'Connection Type' Select PPP over ATM (PPPoA) Enter the username and password for the broadband provider login. Click next Change your user name and password. Click the Next Start button and wait for the new config to kick, about 20 seconds. · Log in with a new admin username and a password you just changed. · Click Finish Surfing away. Additional Wireless Config (Settings Be sure to install WEP encryption. · Time zones (WDS (Internet Connection (ALT) Connect the phone line to the broadband router outlet. · Open in your browser (Firefox NOT Internet Explorer) o Login: Administrator o Pass: Administrator Click on Speedtouch in the blue menu on the left. · Click on the Customization link according to Select Task... Click Next on the pop-up. · Select the route PPP and then click next Select 0.38 from the list for VPI/VC) Select PPP over ATM (PPPoA) for 'Connection Type' Enter the username and password for the broadband login provider. Click Next NB. Only if you are on AOL, select PPP over Ethernet (PPPoE). Back time customization Encourage your (Firefox) browser on SpeedTouch's configuration to back up and restore (Click on the backup configuration now... Button. EDIT: It doesn't work so well and usually requires the hub to be cleaned and configured from scratch again. HomeHub Cleanse and Restore the WARNING configuration - This will completely reset to the factory setting. To clean up Settings with the device just keep in the Wireless Association button on the back of the router until all the lights are off and it makes a click (should just show the light of the data). · Remove the power, wait 30 seconds Holding the WA button again to plug the power. · Allow the lights to settle, about
