Over the past few years, Keurigs has taken the world after the storm because of a combination of consistent quality and convenience. Making coffee in a hurry has never been so easy, but so Traditional coffee coffee The Keurig coffee machine needs regular maintenance. In order for your prized Keurig coffee machine to work optimally, you will need to perform general cleaning as needed, and every 3 to 6 months you will want to get your machine as well. To get started, you'll only need a few household cleaning supplies and a little time to spare. Materials you will need Here is a run-down of everything you will need to clean your Keurig coffee machine. Water vessel soap Paper clip White acid (just for cleaning peeling) Clean cloth Clean sponge Luckily you have in the house probably have everything you need. Keep in mind that you do not want to use diluted acid. General cleaning tips If you just want to pre-light the general cleaning of the Keurig coffee machine, the following tips may be easier. 1. Switch off the machine before starting the cleaning process before starting the cleaning process. When switching off the device, keep the power cord away from the work area so it does not get weasy. Then you have to dismantile what you can. You've probably already noticed if you accidentally run into a cup stand to move. The machine has several equally removable parts and can be washed in warm milan water. Removable parts are: Li's drip water tank Drip If it has been some time since you last cleaned your machine, you can let the removable parts get a little wet while you complete the rest of the general cleaning. 2. Remove the K-Cup holder K-cup holder is also removable, but you will need to pull it. To remove it, grab the holder on both sides and firmly pull outwards. At the bottom push the K-cup with the other hand. Eventually, you should be able to move the holder out of the machine. Be careful as they are under the needle holder and if you are not careful, you may stab yourself. For this piece, you can simply rinse and wipe it with a clean cloth. 3. Wipe the machine down with a clean, flour cloth wipe the outer surfaces of your machine. Make sure you get all the angles and cranes to make sure you don't have a sticky residue that can attract pests. Take a special look around the K-Cup. They like to collect granules from K-cups here in particular. 4. Carefully With the exit needle In the area of the K-cup holder are needles with three holes for the floor to pass through. Residues are often trapped in this area and must be disposed of during the cleaning process. To clean this area, take the paper clip and align it. Use it to reproduce residues or blockage near outlet holes. Avoid touching the area with your fingers as you may be injured by needles. When you're cleaning, know that you won't be able to push the press to the other side so you shouldn't try to force it. Consider using lamps so you can see all the remains trapped in this area. 5. Reassemble the machine Now that you have deleted everything, it is time to reassemble the machine. Pin the suitcase and K-cup back into place and re-insert the drip pieces. Before replacing them, make sure that all removable parts are in the ass. Then you're going to have to turn it back on. Cleaning the Keurig machine If you only perform general cleaning on your machine, you can stop with the previous step. However, if you are doing more thorough or seasonal cleaning, continue to move away. 6. Acid washing the kis is a powerful cleaner and something that we all have in our kitchens already. You can use the acid to drag the machine for each copy. Put into your water tank in dissolved acid and run a regular beer cycle. Do not use the K cup for this cycle and do not collect welded acid on the drip tray. Running the kis through your machine is called removing the hen's and serves to remove calcium and other accumulations from the internal mechanisms of your machine. While you can do general cleaning weekly or monthly, the towed should only be done every 3 to 6 months. However, it is important to clean all elements of your machine from time to time and reduce the potential health risks from bacteria or residues. Do not use the K-cup again for this procedure. Continue with the beer until the machine gives you the Add water sign. At this point, add another circle of sou much and allow the machine to draw the inside of the acid. This time you'll want the kis to sit in your machine for a few hours to cope with every stubborn copy. Prepare to sit the machine for most standard models for a good 3 to 4 hours. After waiting for the appropriate amount of time, start another beer and discard the remaining acid. 7. Remove fresh water As before, place the cup on the drip tray and do not use a K-cup. Fill the tank with water, as usual would. Start the beer with only water to remove any leftover acid in your machine. Repeat the water up to three times to completely remove the taste of the acid. 8. Additional tips for keeping Keurig Coffee Maker Clean To help with future cleaning you go faster to the touch, you can take some priority steps to reduce the setting options in your machine. First, use bottled water over distilled or softened water. Bottled water won't cause as much construction. In addition, if you notice that your system is not working as it should, it may be a sign that the needle's input and existence may be clogged. This should be your first step to troubleshooting, but be careful around these needles. Takeaways Keeping your Keurig coffee maker will help preserve the flavor of your coffee, tea, apple, hot chocolate and anything else you can find in the K-cup. In addition, it will help you to avoid risks associated with the use of rarely cleaned kitchen items. Proper maintenance of your Keurig coffee machine will keep your appliance up to a large early morning. 1 2 3 4 5 6 7 8 9 10 12 Table of contents 13 This is for a dumb version of a brewer without a screen. It's not meant for any other device. Symptoms; Your machine is not responding and frozen with all the lights on and just recording partial cups or nothing. timeline; You are in the midst of dekalcity your machine or you have not cleaned it in a long time. I guess you're late for work, too... The cause; Calcium or cotton wool accumulates in the heating element and/or needle composition. The blockage causes the water in the element to turn to steam and the air locks the machine. Coffee terrain will also be attached to time to time. If you have keurig, you are familiar with how to clean the needle. I will not cover this.\*Read and understand all these instructions, including WARNING!\*Turn off the machine for ten seconds. Plug the device back in. \*Press the power buttons and large cups at the same time. You're both going to shine a light. Release both buttons.\*Quickly press the middle cup button and then the small cup button. One by one.\*The pump will go into manual mode and pump the water continuously so that they keep the container(s) ready.\*Press the small cup button to stop the pump again. Do not dry the tank.\*Switch off the machine. Pour the tank and try to rinse as usual. WARNING; If you've been messing with a machine trying to solve this problem, the heating element will be red. Turn off the machine and let it cool for an hour. If you do not, the water may flash under high pressure, which can cause damage and damage! Injury!
