

"How a hare catches a cow: Skills for sustainable thinking"

The workshop's participants will experience sustainable thinking skills like systemthinking, creative thinking and critical thinking. In a participatory way they'll discover the theoretical foundations of these skills and how they can be applied in diverse educational settings. Also, the concept of sustainability will be explored. Because it is often misused, a clear definition is necessary. Furthermore, participants will acquaint themselves with the sustainable thinking skills and experience tools to apply them. Moreover, we consider reflection essential to learning. Therefore, it will be integrated into the workshop. Ultimately, the goal of the workshop is to demonstrate what sustainable thinking skills are and how they can be applied easily in any learning situation.

Djapo has participation in its DNA, so it will also be a key element of the workshop.

INTERVENTIONS IN
EDUCATIONAL SETTINGS

KOEN CORNELIS
TRAINER, COACH & ADVISER AT DJAPO VZW
BELGIUM

Djapo enables people to make sustainable decisions by using sustainable thinking skills like systemthinking, creative thinking and critical thinking. Koen gives workshops to pupils (ages 3 to 18), coach (future) educators on how to foster sustainable thinking skills in schools and cooperate with state and nonstate actors to implement sustainable thinking skills into the fabric of Flemish education. The Sustainable Development Goals certainly are an important source for him. Also, the E.G.O. congress, which focused on transferring the ownership of learning processes to students. Lastly, Linda Booth Sweeny's work was an important inspiration in the development of the educational material concerning systemthinking.
