The patio heater will allow you to keep holding backyard gatherings well in the fall, as they emit the perfect amount of heat to keep your patio toasty warm. One of the most important considerations you need to make as you shop for a patio heater is its heating source. You can find models that run on propane gas, as well as electric options, each of which has its advantages. There are also infrared models that many people consider safer and more effective. You also want to think about whether you want a self-contained, wall, or ceiling-mounted model, depending on the location of your open space. Here, the best patio heaters you can buy today. Due to the increased demand for online shopping, the items in this article may be in stock. Updates in this article will be made frequently with the products we recommend. You'll be hard off finding a better quality heater than the Frontgate 46000 BTU Patio Heater, which has a classic and sturdy stainless steel finish. This heater works on liquefied gas tanks (sold separately) and it can heat open space up to 200 square feet. This patio heater has a Piezo lighter system to get its stainless steel burners up and running fast, while the automatic shut-off valve ensures that it will not accidentally be left at night. Standing on an extremely stable wide base, the device is just over 89 inches tall and weighs 42 pounds, and it comes with wheels for extra portability. Reviewers That it's attractive, well built, and easy to assemble, and it kicks off an impressive amount of heat, so you'll be able to use it well in the colder months. If you have a smaller patio space, you can probably get away with using a desktop patio heater. This 4500 BTU pick from Hampton Bay is perfect for small small space, and only when temperatures drop down into the 40s to 60s- it's not built to freeze temperatures. Compared to some other heaters that use lamps to heat the space and objects around them, this choice uses real flames that are just as attractive as it is effective. The device itself is lightweight, so you can easily move it from the porch to the backyard if necessary. And if you're concerned about the safety of open flames, be aware that the heater comes with glass panels so no one gets hurt. Note that an assembly is required and it uses a 20-pound propane tank (not included). If you already have an umbrella patio set up in the open space, it's quick and easy to install an ART TO REAL Electric Patio heater- you can choose to either mount it on the umbrella pole or hang under the awning. The electric infrared heater has three folding heating panels that extend from the central ring, and it has three heat settings (500, 1000 and 1500 w) that can heat up to 15 square feet. Although it's not as warm as it is anymore, the gas analogues are odorless, much cheaper to maintain, and silent. If you are on the hunt for a sturdy, attractive propane heater, look no further than Nova Patio Heater. This model has a significant 46,000 BTU thermal output thanks to its ceramic burner, and its infrared heat can blanket a 9.5-foot radius. It works on 20-pound propane cylinders that fit perfectly into the base, and it can run up to 12 hours per tank. The Nova Patio heater has an artificial concrete base, as well as a stylish glass tube surrounded by a protective cage. There is an electronic ignition for easy operation, and the device even comes with a fabric-lined protective cover. As mentioned, infrared heaters work by heating objects around your patio, not just the air that helps the area stay warm for longer. They are also environmentally friendly and safe to use, so people love models such as the Muskoka SunWave 3000-Watt Patio Heater. The device is designed to be installed on the wall or ceiling (the installation equipment is sold separately) and offers three temperature settings, depending on your needs. This patio heater comes with a remote control for easy adjustment. It's also waterproof, which means you can mount it almost anywhere without worrying about it during a night shower or unexpected snowfall. Many patio heaters have a very utilitarian look, but if you're looking for something a little more stylish, consider Lightfire Patio heaters. Although quite expensive, these models look like what you'll find in High-end, thanks to their sleek lines, built-in LED lights, beautiful glass tubes showcasing internal flames. These heaters suck up to 42,000 BTU infrared heat, which is powerful enough to warm 450 square feet. They work on 20-pound propane propane which are placed in the base and they come with a remote control for more convenient work. The wall patio heater saves you the hassle of having a bulky standalone unit in the corner of your patio. This Hiland model is designed to be hung on the wall or ceiling, and because it's electric rather than gas, it's more portable (and cheaper) to work with. At 1500 w, the Hiland Electric Patio heater is best used for porch, patio, and space of less than 15 square feet. Its rotary wall mounting allows you to indicate the heat where it is needed, while its connected remote control makes it easy to turn it on without getting up. What to look for in Patio Heater Power Power Patio heaters are available with a variety of fuel or power source options. Propane is the most popular fuel source for patio heater, but if you don't want to deal with propane tanks, then an electric patio heater might be a better fit. Electric patio heaters can usually be connected to standard residential sockets, but make sure they are protected from the elements to avoid electrical hazards or malfunctions. Range Are you looking for a personal sized patio heater that will keep you and a friend or two warm or larger units that can heat things up for a small crowd? Large patio heaters tend to have a larger range - up to 18 feet or more, while small, desktop models will only emit heat a few feet away. Thermal output intensity and patio heater efficiency is probably best assessed by its thermal output. It is usually measured as BTUs for gas-burning patio heaters and watts for electric heaters. To compare how well the two blocks will heat your space, compare the BTUs or watts of each model to find one that will match your temperature and space preferences.
