This is the support site for the FIRST EDITION (November 2010). Please use the link at the top if this page to access the code from the SECOND EDITION (November 2016). Breaking News: App Engine Code Update: As of January 1, 2014, Google App Engine no longer supports webapps based on release 2.5 of Python. This breaks the code in the book. Here's updated code for the webapp in Chapter 10 which is compatible with release 2.7 of Python, which is now GAE's standard. Note: in addition to dropping support for 2.5, Google also dropped support for the Django forms technology described in the book. The code in the ZIP archive has been adjusted to "hard-code" the form, as opposed to dynamically generate it with help from Django. Important PyPI Information: The good folk over at PyPI have created a new "testing site" for Python modules. This is the site you should use to practice uploading as per Chapter 2 of the book. There's a tonne of nester modules on the real, live PyPI site that really shouldn't be there (as the world only needs *one* nester module). If you use the testing site when doing the exercises in Chapter 2, we can all keep the main site free from unnecessary copies of the nester module. Thanks for your cooperation with this. This site provides the extra bits'n'pieces promised in the book. The Resources tab contains links to download the sample files, while the Links tab provides a set of weblinks to additional information. If you think you've spotted an error/typo, check the book's errata page to see if it's already been reported. If you have a question, ask it at the book's official support forum. ISBN: 1491919531 Title: Head First Python Pdf A Brain-Friendly Guide Author: Paul Barry Published Date: 2016-08-25 Page: 550Paul Barry is formally educated and trained in Computer Science and holds a Masters Degree in Computing Science. He has been programming professionally, on and off, for close to 25 years. Paul already has two textbooks to his name, and is also a Contributing Editor to Linux Journal magazine. His day job is with the Institute of Technology, Carlow in Ireland where he has spent over a decade preparing Ireland's next generation of computing folk to be productive in the workforce. His role as a third level educator affords him the opportunity to explore, learn and teach the very latest programming technologies and practices, which is something that he enjoys even though he knows this makes him a bonafide "geek". Paul lives just outside the town of Carlow in Ireland with his wife, two sons, daughter, dog and cat. There's a bunch of computers and a growing collection of music instruments in the house, too (and like a lot of the Head First family, Paul is a struggling guitarist trapped inside a geek's body). He has so far resisted any suggestion that the family acquire a hamster ... or a set of drums. Want to learn the Python language without slogging your way through how-to manuals? With Head First Python, you'll quickly grasp Python's fundamentals, working with the built-in data structures and functions. Then you'll move on to building your very own webapp, exploring database management, exception handling, and data wrangling. If you're intrigued by what you can do with context managers, decorators, comprehensions, and generators, it's all here. This second edition is a complete learning experience that will help you become a bonafide Python programmer in no time. Why does this book look so different? Based on the latest research in cognitive science and learning theory, Head First Pythonuses a visually rich format to engage your mind, rather than a text-heavy approach that puts you to sleep. Why waste your time struggling with new concepts? This multi-sensory learning experience is designed for the way your brain really works. Easier to get through the book because its fun to read. Excellent introduction to Python. The book focuses on being fun to read and providing a real understanding of why things work the way they do. The other two intro to Python books I have are not fun to read and concentrate more on trying to teach the reader as many functions as possible but at the cost of being a bit dry.The author spends several chapters explaining how Python can be used to create a web app that stores and manipulates user entered data in text and SQL databases. This is also a topic I was very interested in but assumed I would need another book for it.I invested about 30 hours over 2 weeks going through this book and I feel that I now truly understand the foundation of how Python works. This book is definitely not a reference book but that's what Google is for.Don't hesitate, just buy this book! I have read a number of Python books and watched videos but this book really digs down and explains a lot of what goes on under the hood. Excellent explanations, often repeated in different ways so that it is hammered home. Can't recommend any other book as much as this one. A must have!!!!!!!!!!!!Great book although Kindle search is lacking When faced with a bunch of different Python books, this one looked like the most engaging. I opted for the Kindle edition, as I assumed that the search function would be essential.To be sure, HFP gets you right into coding. Before you know it, you're writing programs. I also revisited some SQL statements and learned some Mac Terminal commands along the way. I found Homebrew and MariaDB far easier to navigate than MySQL.I was able to follow along and endure the inevitable bumps. (One minor pet peeve: Kindle search didn't pick up code because the publisher chose to store these snippets as pictures. This made searching more difficult.)My mind is like oatmeal because a newbie programmer cannot learn a robust general-purpose language such as Python in ten days. Still, I enjoyed the book and know 100x as much about Python as I did two weeks ago.
