All evaluation software is completely free to try. Microsoft Windows 10 Product Evaluation offers product testing, evaluation and certification for a single Windows 10 image. This download includes a full version of Windows 10 and provides a product evaluation test environment where you can download and test all of the included software. Windows 10 Product Evaluation also includes a fully-configured Windows 10 image that is fully functional on the included DVD, a license to download and install Windows 10 in your organization, and 24 months of service to all Windows 10 licenses. Use the evaluation environment as your test environment to validate your build with all Windows 10 updates and features included. Windows 10 Device Enrollment allows for the automated testing of a device and a product evaluation environment for those devices. This installation also includes a fully-configured Windows 10 image that is fully functional on the included DVD, a license to download and install Windows 10 in your organization, and 24 months of service to all Windows 10 licenses. Test your device against all Windows 10 updates and features included with the evaluation environment and you will know that it will work with the latest Windows 10 updates. Microsoft's answer to the popularity of Android-powered smartphones in business, Microsoft 365 Commercial (formerly called Microsoft Intune Mobile Device Management and Microsoft App-V for Business) is a commercial package that combines management and protection of devices with deployment and management of office apps and devices, app

protection, and data protection. The evaluation version of Microsoft 365 Commercial includes the installation of a server. Microsoft 365 Enterprise Mobility + Security is the latest version of Microsoft's enterprise mobility management suite. M+S is a unified security and management platform for mobile devices in the workplace. It includes a mobile device management (MDM) solution to secure and manage apps and data on endpoints. It also includes mobile device and user management, remote desktop and application access, data loss prevention, mobile security, biometrics authentication, enterprise device encryption, device compliance, and encryption at rest. The Microsoft Assessment and Planning (MAP) software enables you to test, deploy, and migrate applications in test, development, and production environments. It is designed to collect data from test and production environments in a way that is repeatable and relevant. The goal of this product is to enhance the functionality of your application by providing a robust testing platform that collects data about your application in a controlled environment. Microsoft.NET Framework 4.5 is a suite of technologies that can be used to build applications for the Windows platform. Included with.NET 520fdb1ae7
