

LEADALEAP:

The Multidimensional Ecosystem

Strategic Partnership & Equity Co-Founder Dossier (2026)

Confidential – For Intended Recipients Only

A MESSAGE FROM THE CEO

Dear Future Colleague,

Welcome to the inner circle of the **LEADALEAP Multidimensional Ecosystem**.

If you are reading this, it is because we recognize in you a rare combination of **technical excellence, capital alignment, and the ambition** to build something that outlasts the current cycle of innovation.

We are not here to build another "app." We are here to build a **Circular Utility**—a government-sanctioned infrastructure that solves the most pressing challenges of the 21st century: **Food Sovereignty, Water Resilience, and Waste Transformation**.

The Institutional Shield

As of March 2026, LEADALEAP has reached a critical milestone. Our business model has been vetted and approved by **ENISA (Ministry of Industry and Tourism)**, and we have been designated as a **Project of Special Strategic Interest** by the Spanish Government.

This is more than a certification; it is an industrial "green light." It means our **€6M IP-backed valuation** is recognized by European authorities, and it grants us—and you—a fast-tracked pathway into the European Union's economic heart.

The Summer 2026 Pivot

The dossier you are about to review outlines our **9 Project Modules** and the **Huelva Industrial Pilot**. But more importantly, it outlines a pathway for **you**.

We have designed a 90-day transition roadmap that turns a visit to Europe into a permanent legacy. Through our **UGE-CE Strategic Interest status**, we are prepared to fast-track your residency and integrate your skills directly into the leadership of our ecosystem.

Our Shared Mission

From our "**Kick Out Malaria**" social impact in Africa to our high-efficiency **Multi-Layer Nurseries** to be built in Southern Europe, we are proving that profit and planetary resilience are the same thing.

I invite you to review the following pages with a builder's eye. We are seeking co-founders who don't just want to see the future—they want to own the infrastructure it is built on.

Let's build forward.

To your success,

Paul Abayomi Jeremiah

Founder & CEO

LEADALEAP | *Project of Strategic Interest (UGE-CE) | ENISA Vetted*

CHAPTER 1: THE VISION – A CIRCULAR REVOLUTION

The LEADALEAP Philosophy

LEADALEAP is not just a company; it is a **government-sanctioned circular utility**. We bridge the gap between household behavior and industrial resilience. By transforming everyday waste into high-value agricultural and structural assets, we are building the blueprint for a self-sovereign Europe.

The 9 Interconnected Modules

Our strength lies in the **Synergy** of our 9 core IP project areas. They are not isolated; they are an integrated loop:

1. **Seed and Stem Collection:** Reclaiming the genetic heritage of non-GMO crops from homes from farmers.
2. **AguaCluster:** Edge-AI mesh for precision irrigation and water resilience.
3. **R2W (Repurpose-to-Wealth):** Transforming polymer waste into nursery infrastructure.
4. **CiggyBuddy:** Detoxifying tobacco waste into high-value cellulose and upcycling it into durable products for government and corporate clients, and everyday users alike.
5. **Multi-Layer Nurseries:** Achieving 1,000% efficiency in plant propagation.
6. **Glocal Marketplace:** Connecting household supply to industrial demand and finished products to “glocal” consumers.
7. **Landrace Preservation:** Protecting local biodiversity for food security.
8. **Industry 4.0 Youth Training:** Upskilling the next generation of technicians.
9. **Kick Out Malaria:** Our validated global behavioral change and health franchise.

The Connection: Our ecosystem integrates nine high-leverage sectors into a single industrial loop, ensuring that resource efficiency in one area drives productivity in the next. R2W builds the trays that the Seeds grow in, powered by AguaCluster water, scaled by our Youth, and rewarded through our Marketplace.

CHAPTER 2: THE SPANISH ADVANTAGE – GOVERNMENT VALIDATION

Project of Special Strategic Interest

LEADALEAP has achieved a status few startups reach: **National Government Approval in Spain.**

- **ENISA Certification:** Our comprehensive business plan has been reviewed and approved by **ENISA**, the Spanish Ministry of Industry's agency. This validates our **innovation, scalability, and strategic value** to the Spanish and European economies.
- **The "Golden Key" to Europe:** Operating a business in Spain requires rigorous vetting. Having an ENISA-approved plan means LEADALEAP is recognized as a vehicle for national progress, opening doors to **EU-wide grants, institutional support, and public-private partnerships.**

**These logos are used solely for illustrative purposes and remain the property of their respective owners and institutions.*

CHAPTER 3: THE CO-FOUNDER OPPORTUNITY – RESIDENCY & SCALE

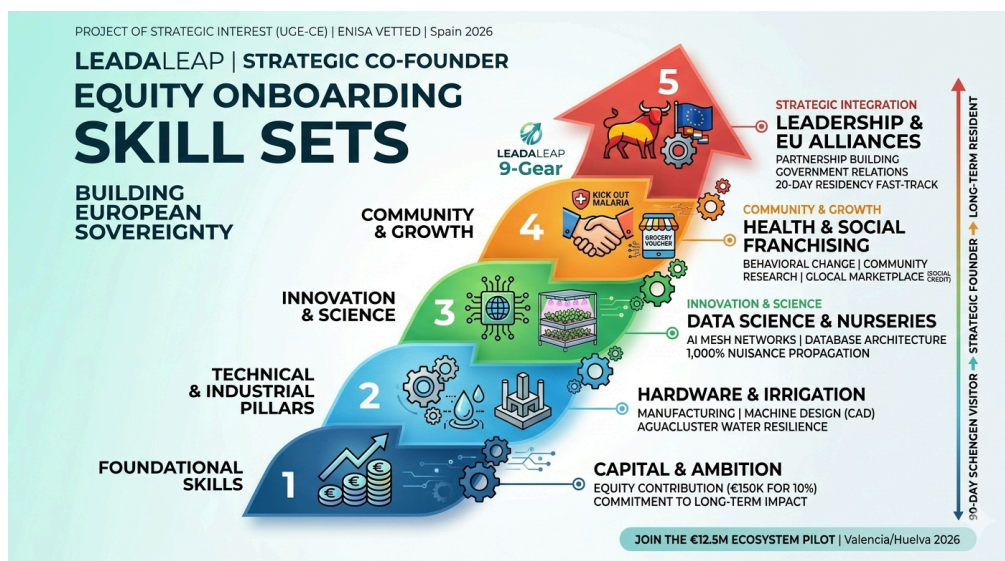

The 20-Day Residency Fast-Track

For the right Equity Co-founder, this project is a gateway. Because LEADALEAP is designated as a project of **Strategic Interest**, we can facilitate **Spanish Residency for our core team in as little as 20 days**, provided you meet the personal requirements (clean record and matching skill set).

Targeted Skill Sets We Are Onboarding

We are looking for Co-founders who bring **Capital + Talent**. We need specialists in:

- **Infrastructure & Irrigation:** Irrigation engineering, weather research, and water billing systems.
- **Advanced Manufacturing:** Interface specialists for machine drawing, visualization, and hardware integration.
- **Primary Healthcare:** Researchers focused on infectious diseases, sanitation, and family-level data gathering.
- **Data Science & AI:** Database architects to build our **Social Credit/Green Reward** system (connecting household collection to grocery vouchers).
- **Visual Documentation:** 3D animators, photographers, and content developers to chronicle our environmental impact (e.g., mapping cigarette waste in drainage channels).
- **Partnerships:** European-based specialists to onboard EU irrigation and manufacturing partners.
- **Curriculum Development:** Training-to-startup curriculum and program anchoring.

CHAPTER 4: FINANCIALS – THE EQUITY UPSIDE

Immediate Value Appreciation

We are currently valued at a **conservative €6 Million** based on our 9 core IPs.

- **The Entry:** We are offering **10% Equity** for a contribution of **€150,000**.
- **The Math:** At a €6M valuation, 10% is technically worth €600,000. By entering at €150k, your equity value is **instantly 4x your investment** at the moment of entry.
- **The Dilution Protection:** As we move toward institutional funding rounds in the next 60-180 days post-incorporation, your early-stage co-founder equity is positioned to increase in value by **more than 300%** upon company formation and subsequent valuation spikes.

NEXT STEPS

If you have the capital to commit and the skills to lead, the next step is a formal **Chemistry Call** followed by a review of our **Technical Data Room**.

WHAT'S MORE ...

Turn Your Summer 2026 Trip to Europe Into a Defining Moment.

Move yourself from uncertainty to possibility.

**Your 90-day Schengen stay does not have to be just a visit.
It can become a transition point. A pivot. A launchpad.**

What if your 90-day Schengen journey could evolve into:

- **A long-term European opportunity**
- **A strategic equity position in an innovation ecosystem**
- **A government-recognized entrepreneurial pathway**

- **A residency-qualifying project in Spain**
- **A gateway into EU markets**

Through the LEADALEAP Multidimensional Ecosystem — formally approved under Spain’s entrepreneurial innovation framework and evaluated by Empresa Nacional de Innovación (ENISA) — qualified collaborators may explore structured participation pathways aligned with European innovation policy.

This is not tourism.

This is transformation.

Your 90 days can become:

- **Strategic positioning**
- **Institutional alignment**
- **Equity participation**
- **Policy-backed innovation engagement**

Europe rewards structured vision, innovation capacity, and long-term builders.

If you have the skills, the capital alignment, and the ambition to participate in a multidimensional ecosystem spanning water systems, circular economy, health, data intelligence, and sustainable infrastructure — then your 90-day stay can become something far greater.

Summer 2026 can be your turning point.

JOIN US.

POSITION YOURSELF.

BUILD. OWN. BECOME.

CHAPTER 5: WHY CHOOSE THIS ROUTE INSTEAD OF A DIGITAL NOMAD OR NON-LUCRATIVE VISA?

Choosing the **startup entrepreneur route through our government-vetted project** offers protections, opportunities, and long-term security that Digital Nomad and Non-Lucrative visas simply do not provide.

1. Your capital works for you — not against you

With Non-Lucrative visas, you live off your savings. Over three to five years, your capital, pensions, and assets steadily deplete, with no structured way to recover or grow them.

Through our route, your capital is actively deployed within a government-approved startup. It works for you, grows in value, and gives you equity, profit participation, and long-term upside.

2. You secure legal employment from day one

As a co-founder contributing your skills, you automatically have lawful employment within the project.

Digital Nomads often lose clients within the first year, struggle to renew, or arrive with fragile arrangements from former employers. Non-Lucrative visa holders are not allowed to work at all.

3. Government-approved, vetted, and protected

Our startup operates under a **government-approved business plan** across **nine vetted project areas**.

This means:

- You are not viewed as “just another immigrant,” but as a **builder and economic asset**
- Your role is protected within a regulated framework
- Your voice matters, and your contribution is recognized

Entrepreneurial visas are highly regulated and difficult to obtain alone. **We have already done the heavy lifting.**

4. No wasted months, no silent rejections

Digital Nomad and Non-Lucrative visas are currently saturated, with high rejection rates. Many applicants waste:

- Months waiting in Europe
- Thousands of euros in living and legal costs
- Time that never leads to approval

With our route, you do not submit an individual business plan or wait endlessly for uncertain outcomes. The structure is already in place.

5. Family inclusion with full rights

Upon approval:

- Your spouse receives the same residency category and can work (subject to compliance)
- Your entire family benefits from your entrepreneurial status

This is not guaranteed under many other visa categories.

6. Permanent residency and citizenship pathway

Our route provides:

- Permanent residency in **5 years** (subject to compliance)
- Eligibility for **Spanish citizenship in around 10 years**
- More flexible travel and holiday allowances than other visas

7. Real business leverage and funding access

Our nine project areas align with European priority sectors such as:

- Agriculture
- Health
- Education
- Industrial innovation
- Data infrastructure
- Circularity
- Rural development / Job creation for youth

- Economic growth
- Climate Tech

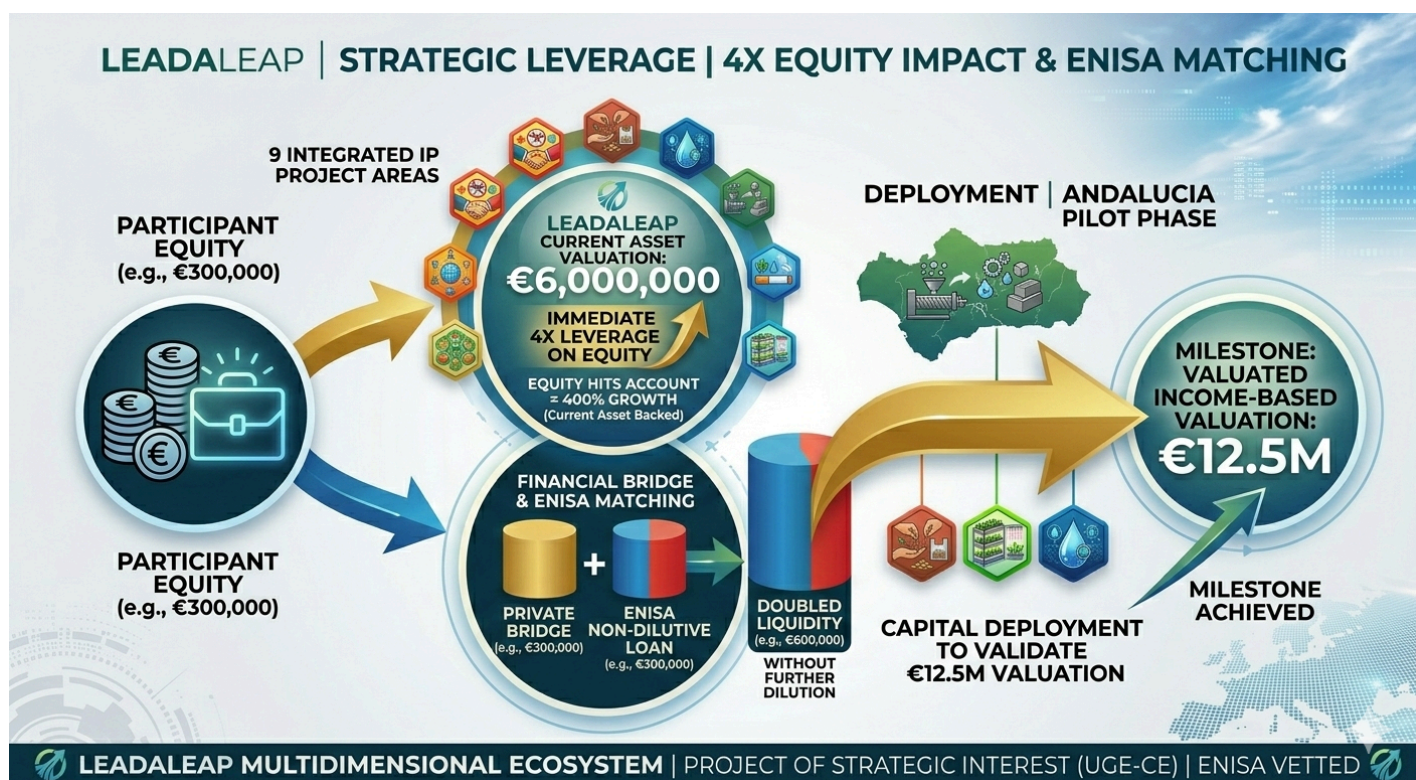

This alignment allows access to **government funding and priority programs**, reducing risk and ensuring business continuity — which means job security for you.

8. Scalable value and equity upside

From the moment you join:

- Your capital gains leveraged value within the company
- Early-stage valuation growth creates long-term upside
- You receive **profit share plus salary** as operations scale

You are not just earning — you are building equity.

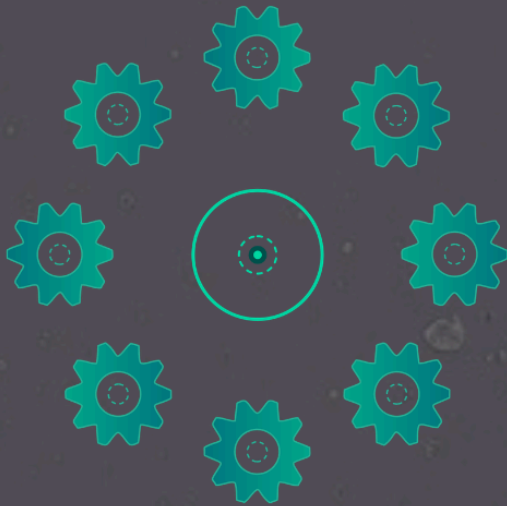

NO PLACEHOLDERS, NO HYPE—GET TO SPAIN AND HIT THE GROUND RUNNING FROM DAY 1. GET YOUR 90-DAY ROADMAP HERE.
