In 1960s Argentina, the rule of law is a dangerous thing and a young lawyer is no stranger to running afoul of the law. He's been arrested, shot at and thrown in jail, and he has a few ideas about what is to be done about it. His ideas are a bit unconventional.

In 1930s Cairo, Egypt, it seems like all the police have is the law. They are concerned about running into a woman journalist, who is not afraid to ask questions. She is not afraid to find the answers too, which is not a good thing in Egypt. As the two take to the streets to find information about the Dictator's death, they find themselves closer to him than they ever thought they would be. Category:American historical novels Category:Novels set in Paris Category:Novels set in Shanghai Category:Novels set in Cairo Category:Novels set in Argentina Category:Novels set in France Category:Novels set in EgyptQ: Can't change user to root on Ubuntu I've been trying to solve this problem for a couple days and I can't get anywhere. I tried to change the permissions for /bin/bash to 466, still no luck. I also tried to change the permissions on root's home directory to 664, still no luck. I even tried to chmod 466 /bin/bash and 466 /usr/bin/sudo as I am using sudo for commands. I have rebooted the computer after changing the permissions, and I have removed my permissions for the .bash\_history file and the sudo and etc/sudoers.d/list directories. I have also tried to change root's password to something other than it's current one. I'm currently using the default user ubuntu and I can't figure out why I can't get to change the permissions or user to root. I'm using Ubuntu 18.04.2 LTS. Thanks in advance. A: Ubuntu is always logging you in with the user name you set during installation. All you have to do is login as the account you chose during installation (the one that will be logged in automatically). You are not logged in as root - you are logged in with ubuntu. Ubuntu has no root account, you can't login as that account, instead, you login as ub 520fdb1ae7
