Learning is much more than reading a textbook. That's why the 10th edition of Research into Life is closely integrated with an online learning center where students and teachers alike benefit. OLC provides animation, virtual labs, online quizzes, power point lecture outlines, and other tools to help make learning a little easier and learning a lot more fun. Research in life covers the entire field of basic biology, and emphasizes the application of this knowledge to human problems. This approach emphasizes concepts and principles rather than detailed high-level scientific evidence and terminology. Michael Windelspecht taught introductory biology, genetics and human genetics in online, traditional and hybrid formats in community colleges, universities and military institutions. Educated at Michigan State University and the University of South Florida, he is currently an associate professor of biology at Appalachian State University. He served for more than a decade as introductory biology coordinator at Appalachian State University, a program that enrolls more than 4,500 students a year. As an author and editor, Dr. Windelspecht has published over 20 reference textbooks and several printed and online laboratory manuals and founded several scientific and communication companies, including Ricochet Creative Productions, which develops and evaluates new technologies for the science class. Learn more about Dr. Windelspecht in www.michaelwindelspecht.com. Sylvia S. McDer is the author of several nationally recognized biological texts published by McGraw-Hill. Educated at Bryn-Mor College, Harvard University, Tufts University and Nova Southeastern University, she holds degrees in biology and education. Over the years, she taught at the University of Massachusetts, Lowell; Massachusetts Bay Community College; University of Suffolk; and Nathan Mayhew Workshops. Her ability to turn to science-shy students led to the writing of her first text, an investigation into life that is now in the fifteenth edition. Highly regarded for her crisp and entertaining writing style, her books have become models for those who write in biology. Start your review of the investigation in life I learned that you should not try to shove a 10-week course in a 5 week time span! I am sorry.... I love biology... But this book I don't have very fond memories associated with it. Of course, the book itself was beautiful. If only (I think) it should have. But... I don't know, actually.... I feel like.... I didn't link up with him as much as I did with my English literature tutorial. But I suppose that makes sense because Literature! Of course, there are feelings associated with it ... Just... Where to start when considering their biology textbo I am very sorry I love biology... But this book I don't really like love related to it. Of course, the book itself was beautiful. If only (I think) it should have. But... I don't know, actually.... I feel like... I didn't link up with him as much as I did with my English literature tutorial. But I suppose that makes sense because Literature! Of course, there are feelings associated with it ... Biology just ... Where to start when considering their biology textbook?! Oh, and by the way... It's not the right cover.... my cover was different, but it was the closest I could find! Put a sad face here ... I no longer finished the whole book, just class. and I don't give it four b/c stars, I really enjoyed it. I find it a well written, fairly easy-to-understand tutorial, and I would recommend it to start a bio student (or for a teacher deciding which text to use for that matter). this text is very well laid out by the Entry-level Biology Review. I'll keep on my shelves for future links. Lots of colorful photos to help illustrate complex biosystems. Very good for bio-class 101. In detail, but not overwhelming. I like diagrams and pictures. This is my very confusing jargon-filled biology tutorial... my teacher is much better at explaining and applying. Seriously, who's worried to write these things? Students, we are committed to providing you with high quality course solutions with the support of excellent service and a team that cares about your success. See the tabs below to explore options and prices. Do not forget that we accept financial aid and scholarship funds in the form of credit or debit cards.
