

## Mirah is your remote medicine partner

As the coronavirus threat grows, the need for excellent patient communication and remote monitoring is becoming more apparent. Many healthcare providers do not have the infrastructure to continue providing adequate services. **As a Mirah customer, however, you're already well on your way.**

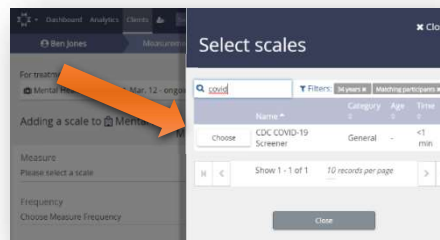

Is your organization trying to prepare a coherent response to the coronavirus crisis? **Mirah can help.** Mirah enables seamless “front door screening” protocols using the Centers for Disease Control and Prevention’s Coronavirus Disease 2019 (COVID-19) assessment. Mirah helps your clinical staff make better decisions about whom to treat in person *before* patients get to your facilities. This is another way Mirah’s measurement-based care (MBC) solution can help – in addition to “regular” benefits of MBC, which include a better 360-degree view of their patients when clinicians are at greater risk of missing in-person feedback like body language and other nonverbal signals.

### Here’s all you need to do to begin coronavirus screening and triage:

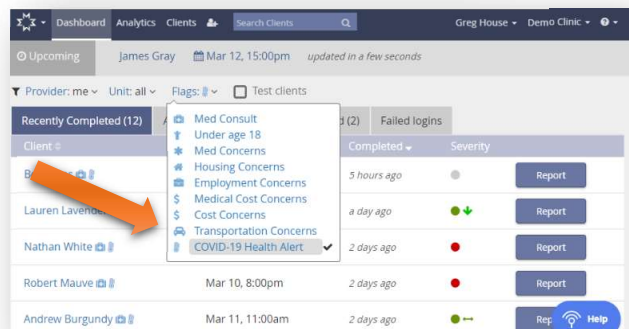

- 1 At the top nav bar, click on your organization’s name, go to “Measurement Plans”

- 2 Type in “COVID,” select the CDC screener from the list of scales, and “Add to Measurement Plan.”

- 3 On main clinician view, go to “Flags,” select “COVID-19 Health Alert” from the drop-down menu

**Or even easier: just email us at [support@mirah.com](mailto:support@mirah.com), and we’ll set up the whole thing for you!**
