

Mirah – Assigning Free-Text Open Response Measure

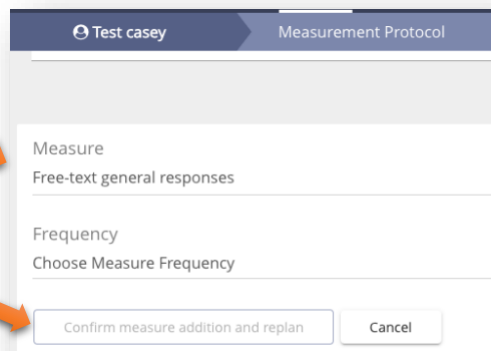

Mirah can give patients an opportunity to express their immediate concerns via a Free-Text Open Response measure that can easily be added to an existing measurement protocol. The patient will answer three simple questions that will give clinicians added insight into the patients’ current concerns. If your patient is completing the measure at home, it will offer the patient an additional way to communicate what is happening for them outside of the questions asked on the other measures.

- 1 On the detail page, select *Measurement Protocol*

- 2 Click “add measure”
And in the search bar, search for “Free-text general responses”

Click *Confirm measure addition and replan*

- 3 Encourage your clients to share:
 - what they are hoping to get from treatment especially if they are not seeing you in person?
 - what they are doing to take care of themselves in these uncertain times?
 - what other things they would like to discuss?
