What is ups my choice uk

UPS is expanding UPS My Choice and the UPS Access Point network, two of the company's services that are claimed to make it easier for retailers and busy consumers in the U.K. and around the world to manage their delivery of home packages. UPS My Choice is now available in a further 15 countries outside the United States, including the United Kingdom. The UPS Access Point network, which already exists in seven European markets, is now also available in Italy and Poland as well as Chicago and New York City and will be further expanded in Europe and the Americas during 2015. UPS Access Point locations will also be available in Canada and Mexico later this month. UPS My Choice Consumers in the UK can now sign up for the free service at ups.com/mychoice. The main benefits are: pre-delivery notices, the ability to redirect packages to another address or reschedule deliveries to a future date, all before a UPS driver makes a delivery. Consumers can also activate a holiday option to have packages held and delivered when they return home. Currently, more than 10 million U.S. consumers already use UPS My Choice to plan their deliveries when and where it's convenient for them. UPS My Choice has experienced rapid growth and excellent customer response with a sign-up rate of 10 new users every minute. Our mobile apps also allow consumers to extend UPS My Choice to their smartphone and offer more delivery solutions for personalized service to suit their needs, says Alan Gershenhorn, UPS Executive Vice President and Chief Commercial Officer. UPS Access Point Last year, 35% of UK online shoppers taking part in the 2013 UPS Pulse by Online Shopper survey said they want convenient alternative delivery locations when they are not at home. In the UK there is an alternative: UPS Access Point locations. These local businesses, such as convenience stores, gas stations and kiosks, with evening and weekend hours, are an ideal fit for a consumer's busy schedule. Online purchases can be delivered to a nearby UPS Access Point site if the retailer offers this option. For consumers in the UK who may not be home for a home delivery, UPS packages can be directed to a UPS Access Point location so they can pick up their packages on their own schedule and at their convenience. Delivery information notices left by ups drivers will inform consumers that they can pick up their package on the same day. Consumers can also deliver pre-branded and prepaid packages to a UPS Access Point site, including returns. Our goal is to warn and deliver 100% of packages to consumers when and where they want them. UPS My Choice and the UPS Access Point network provide consumers with new and unprecedented levels of visibility, communication, customization and control over their. These services also provide e-tailers and merchant traders opportunities to better serve their busy customers, Gershenhorn said. To meet the growing cross-border demand for e-commerce, online retailers in more than 30 European markets will be able to send online orders directly to a UPS Access Point site in France, Germany, Italy, the Netherlands, Poland, Spain and the UK, as well as Canada and Mexico as an alternative to home delivery, increasing delivery options for their customers. There are currently more than 12,000 locations in Belgium, Luxembourg, France, Germany, the Netherlands, Spain and the UK. UPS expects to increase the number of locations to 20,000 in key markets in Europe and the Americas by the end of 2015. In 2013, consumers in Europe spent \$363 billion on the euthanasia programme. As e-commerce continues to change consumer behaviour, the provision of housing package becomes an increasingly important element of the customer experience. UPS implements service and technical innovations that integrate tracking, preferred delivery locations, and reseller communications to provide customers with additional benefits in the future.
