Pinfinder is a small app for Mac, Windows and Linux that tries to find password limitations for an iOS device (iPhone, iPad or iPod Touch) by brute force examination of its iTunes backup, without the need for a jailbreak device. It was written after the PIN was forgotten for the child's iPod Touch and wiping would have been more work than writing this little program. NOTE: This program won't help you unlock a locked device - it can only help restore password limitations, like found in Settings - Common - Restrictions. For more information on the restrictions, visit Apple's website. This blog (which I did not write but inspired this program) mentions pinfinder and contains comments from many people who have used pinfinder successfully. The program is free to download, use and redistribute (see license file). Download melons for Linux, Mac and Windows can be found on the last page of releases. Here are the instructions for operating. In most cases, just running a program (working around OS-specific security restrictions) should deliver the right result. Take a look at the troubleshooting section if you're running into trouble. By default, it will print out the password for all devices it can find unencrypted backup for, displaying most recently backed up in the first place. NOTE: The option to encrypt your local backup should be disabled on iTunes for your device so that the pinfinder can read the file containing the password. You'll see a backup message encrypted in a pinfinder if it's in it. NOTE: The option to encrypt backup should be disabled in iTunes. Download the pinfinder from the latest releases page. Select Open when on-demand web browser Drag pinfinder from the .zip file to desktop for Windows XP/Vista Double, tap the pinfinder icon to run the program. For Windows 7, 8 or 10 Right, click on the start button, and select the Fast Drag Pinfinder icon from your desktop to the hint team window, and click back to run it. Click here for the full size version above the image of the Mac Backup device using iTunes on desk or laptop. NOTE: The option to encrypt backup should be disabled in iTunes. Download the pinfinder from the latest releases page. Select the tar.gz file in the download list to open it. Click the right button on the pinfinder and select Open With - ' Terminal - you get to get about a program written by an unknown developer that you have to accept to use it. Click here for the full size version above the Linux image To download, extract and run binary. \$./pinfinder PIN Finder 1.3.0 iOS DEVICE BACKUP TIME RESTRICTIONS PASSCODE John Doe's iPad Mini November 25, 2015 01:39 PST 1234 John Doe's iPhone 6 Nov 25, Nov 25, 2015 12:15 PM PST 3456 John Dow iPhone 5S September 19, 2014 03:57 PM No PDT password found Troubleshooting Default program will look for password limits for each device that has been backed up, and return results recently back up first. You can also specify the backup directory explicitly on the command line to study backup for a single device: On the Mac it will be in the home directory as /Library/App Support/MobileSync/Backup/for example. /Users/johndoe/Library/Application Support/MobileSync/Backup/51957b68226dbc9f59cb5797532afd906ba0a1f8 On Windows Vista or later it will be something like: Users John Dow AppData Roaming Apple Computer-MobileSync\cinder: \$pinfinder/Users/johndoe/Library/Application Support/MobileSync/Backup/51957b68226dbc9f59cb5797532afd906ba0a1f8 and then find a password that matches the hash (which can then be used with your device). It shouldn't take more than a few seconds to run. If the program can't find a password for your device and you're sure it's looking for the right backup, please open the question and copy and paste the text the program prints in this matter so I can help. Compiling this program If you don't want to use one of the pre-drawn binary files, you can compile it yourself. Download and install Jump Run Go Go set github.com/gwatts/pinfinder Other Resources Inspired by Information Found here: Other Notes Last Tested from iOS 8 to 9.3 on OS X 10.10, 10.11, Windows XP and Windows 8 with iTunes 12.3 About Pinfinder is a small, free program that can use iTunes iPhone backup, iPad or iPod Touch to figure out or screen time code that was previously installed on the device. The program is free to use, does not transmit your data anywhere and works on Windows, Mac and Linux systems. The source code can be found on Github if you want to check it out. It supports devices running iOS 7 or later, generally up to iOS 12.4 - iOS 13 and 13.1 are not supported - See More Pinfinder Instructions very easy to use does only one job. Click on the computer system below for instructions: Windows Apple Mac OS Linux What is the limiting of password limits (also known as screen screen time password iOS 12 and beyond) is an additional 4-digit number that can be installed on iOS devices to limit what apps and operations a person using the device can do who doesn't know the code. It is often used by parents to prevent children from accessing certain apps or shopping in the app. As it is then rarely used, it is easy for parents to forget, which is where Pinfinder comes in! NOTE: Pinfinder can't help restore your unlock PIN, which is used to get into your device; He will only reinstate password restrictions © Gareth Watts. All rights are reserved. Designed by TEMPLATED. Pinfinder Privacy Policy for Mac OS Using Pinfinder under Apple Mac OS X NOTE: Pinfinder only supports iOS 7-12.4 - iOS 13 is not supported To use Pinfinder to restore your iOS password restriction on the Apple Mac machine, follow the steps below: First backup of your iPhone to your iTunes (iCloud backup will not work) - Be sure to unlock the device to unlock the device That you want to unlock For example, the child's phone, even if the password was set through the parent's phone. Use the Backup button to back up your device - you'll need to check the iPhone backup option if you're using iOS 12. Download the latest pinfinder release for the Mac Run program by clicking the right button on the pinfinder icon and selecting Open - you can see the warning you need to take to run the program. Within minutes you should see your password limit printed on the Pinfinder screen can restore password restrictions from encrypted backups, as long as you know the password used to encrypt backups from iTunes in the first place. NOTE: If you're using Mac OS X Mojave (10.14), you'll need to allow terminal programs access to backup data created by iTunes. To do this, open the Security and Privacy panel in system preferences, select the Privacy tab, and add the Terminal (located in the app folder - Utility) to the list of apps allowed. Having trouble? Take a look at the question page. © Gareth Watts. All rights are reserved. Designed by TEMPLATED. Pinfinder Privacy Policy for Windows Using Pinfinder under Windows NOTE: Pinfinder only supports iOS 7-12.4 - iOS 13 is not supported To use Pinfinder to restore your iOS password restriction on the Windows machine, follow the steps below: First backup device to your computer (iCloud backup won't work) via iTunes. Be sure to prepare for the backup The device you want to unlock For example, the child's phone, even if the password was set through the parent's phone. Use the Backup button to back up your device. You'll need to check the iPhone backup option if you're using iOS 12. Download the latest pinfinder release for Windows extract and run the program; within minutes you should see your password limit printed on the Pinfinder screen can restore the password restrictions from encrypted backups, as long as you you you do password used to encrypt backups from iTunes in the first place. Having trouble? Take a look at the question page. © Gareth Watts. All rights are reserved. Designed by TEMPLATED. The Privacy Policy Using a password for restrictions set with the Screen Time tool can keep these settings safe. This is especially useful for parents who don't want their children to have access to certain apps or just want to limit their child's screen time. So, what happens if you forget that password? Unfortunately, restoring or resetting a password is not as easy as some might expect. Apple's solution is to reset the device and customize it as new, because restoring it from backup won't reset that password. This is certainly not an ideal solution for most people. Fortunately, there is another way. Here's how to restore forgotten limitations or Screen Time password. Download PinfinderPinfinder is a free tool that you can use to recover this password. It was designed because wiping the device and starting from scratch is not the most practical way to solve a forgotten password problem. Pinfinder Details: Uses iTunes backup iPhone, iPad, or iPod Touch to find passcodeWorks on Windows, Mac and Linux platformsHas have been tested on OS 8 through iOS 12Does not to pass your dataOffers your source code on Github for your reviews completely free useUsing Pinfinder If you decide that you want to give Pinfinder a try, the process is simple. Here's how to restore the limitations or screen time code on the Mac. For Windows and Linux, the steps are a little different, so visit the Pinfinder website for more details.1) Open iTunes and back up your computer. If you have iOS 12, you will be asked to set a password for backup encryption.2) Download Pinfinder for Mac.3) Double Click Pinfinder or Right Click and select Open.4) you will see the pinfinder command in the new terminal window. If you are asked to enter a password set for encryption (Step 1.5) in just a minute or two, you will see the Screen Time password in the Terminal window. Hit Enter to get out and then close the terminal window. Having trouble? As noted on the Pinfinder website: If you use Mac OS X Mojave (10.14), you will need to allow terminal programs to access backup data created by iTunes.1) Tap Apple icon - System Preferences.2) Select security and privacy and go to the Privacy tab.3) Click full access to the disc left.4) Click sign plus right, view (terminal app) and add to its list. Note: You may need to unlock and enter the system password using the lock icon at the bottom left to make a change. Now that you've allowed access to your Terminal programs, run Pinfinder again using the above steps and it should work just fine. Wrapping it up There's no doubt that if you created a password for screen time, you need to write a write down or add it to the notes. But if you forget about it, there is a way to restore it. Let us know if this happened to you. You.
