This is the way I learned how to do it with my tiny attention span!make a cross of starting colors (pic1) and place all the edge cubes using these moves:(pic2)get cross on all sides using techniques from the last stepplace angles using these moves One of the coolest tricks of the Rubiks Cube to learnbefore trying tricks I would recommend learning to rubik's cube first. So you know the vocabulary, comma tips and tricks. For a major you can check out my Rubik's Cube basics coaching. F L F U U F2 L2 U' L' B D' B' B' L2 UThanks to read, if you have any questions, please leave commentParticipated in The Makerspace contest a cool template similar to the original cube in cubebefore trying tricks I would recommend to learn to tackle the Rubik's Cube first. So you know the vocabulary, comma tips and tricks. For a major you can check out my Rubik's Cube basics coaching. F D' F' R D' R' D D L' F L D'F DThanks to read, if you have a question, please comment belowParticipated in The Makerspace Contest How many times have you tried to solve a Rubik's Cube? If you don't know what a Rubik's Cube is you can see it clearly depicted in the image on the left side. It has 54 equal sized squares, which consist of a bunch of cubes. If you want more information, you can check out this Wikipedia page here. But if you find yourself in this article, chances are you're looking to blow someone up with your superb intelligence in your puzzle solving abilities. Yes, you want to cheat on the children's game. Don't worry, there's nothing shameful about that (YES THIS!). Until now, if you want to cheat on an old Rubik's cube you had to either take it physically apart or remove all the stickers and rearrange them. These methods are hard to say to say to say to say the least, but old school geeks have been making

them for years. I know, I know, to get to the new Rubiks Cube solution. Okay, so no more stall going ahead and check out NO LONGER WORKS this site. When you get there you will see this: So the trick to finding a Rubiks Cube solution is to make the Rubik's Cube on the screen look like one in your hand. You do this by clicking on the color: Just select the color you want to make a square and then click on it. One at a time slowly, but surely. Hey, no one ever said that cheating would be easy! Once you get all the input, you'll be ready to get your hype. Let's take a look at my Rubiks Cube color configuration: Once you've typed all your colors, as I did above, you'll need to press the solution button below the color collector. Once you click, that your Rubiks Cube solution will appear on the screen: Wow one hundred and eight fricking moves? I'll be here all day! Lmmmf. I know I'm going to get one or two moves and quit all my cheating hype There has to be an easier way. Ha! There is a link on the solution screen called Click here to see the diagram version. This will display a step-by-step guide with a visual image. This should help you immensely. Check our solution this way: Still 108 steps, but now it's much easier to follow along. So no matter if you're trying to impress the girl in your class or the kid in the playground it will be your savior. Look, we don't stand for cheating (yes, we do), so don't ruin your fun with that. It's a lot of fun and it gives you tremendous satisfaction when you really solve it the old-fashioned way. :P The author wrote all the code and the ideas behind the algorithm. All of them are original and written by Eric Dietz. Thanks Eric! Are you a con man? Do you have a Rubik's Cube solution under your belt? Legal? How did you do that? What was your secret? Link : NO LONGER WORKS Solve the Rubik's Cube 10 ways to save battery on the Apple Watch to increase battery life on the Apple Watch with these quick tips. Related topics about author Carl L. Gechlik (208 Articles Published) More from Carl L. Gehlik Skip content This classic toy is an amazing way to practice the logic and problem solving skills that are critical to STEM education. Here's how to use the fun. My family had it when I was a kid. I'd pick it up, twist the sides around a few times, and maybe get three blue squares in a row before I'd throw it back in the bin with the toys in frustration. So when my 8-year-old son, Nate, asked for a Rubik's Cube, I assumed he would be stumped by a puzzle like me. Turns out there are rules for tackling Rubik's Cube and lots of online tutorials where you can learn them. Not that it's easy, though. While Cuba's decision may not be the dominion of geniuses as once portrayed, understanding and mastering formulas is tough. Nate watched the video, cried, gave up, tried again, cried again until a few days later... whol, he held a perfectly deciphered Cuba in his hands. Obviously my son has something else that I may not have: sand. And this is one of the biggest advantages of this game. Satisfaction is not immediate - children need to pull out of their reserves of perseverance, determination and resilience to be successful. But this is just the beginning. With cubing secrets more readily available, the satisfaction of the solution has been connecting more and more children like Nate. I've definitely seen a comeback with this toy, says James Brown, executive director of the STEM Education Coalition, a nonprofit organization in Washington, D.C. And he can't Happier. The Rubik's Cube isn't just entertaining, Brown says. This can teach an important mathematics and science. The old-fashioned puzzle, he explains, builds and uses skills that will help children succeed in the modern classroom and their 21st century careers. RELATED: 8 Fun STEM Crafts for Children This puzzle has come a long way since Eino Rubik, a professor of architecture in Hungary, invented it in 1974. Currently, Brown says, the cube can be used as a practical way of learning algorithms that are the backbone of computer programming and mechanics. Figuring out how to solve problems is the heart of the scientific process, so tinkering with a Rubik's Cube fits right into STEM education goals, Brown says. Studying one algorithm (on YouTube, say) helps children start making decisions on steps, each of which is based on the latter. They learn to think critically in general and are able to generate more flexible and effective strategies to solve this, or indeed any, puzzle. Patrick Bossert, who wrote a guide to a bestseller called You Can Do the Cube in 1981 when he was just 13!, agrees. He credits the puzzle to stimulate his love of logical reasoning, central to which Is Cuba if ... then the formula. If you turn one side up, for example, the blue square will be next to the green. Children will see these concepts in everything from homework to math to business spreadsheets. RELATED: Get a Rubik's Cube at your parents' store! Bossert says that qubit also helps to develop spatial awareness, the ability to see and understand two or more objects in relation to each other and to one another. Children should follow the instructions for the placement, which include concepts above, under, and over. This may seem like a simple material, but being able to visualize and then perform in a step is actually a complex cognitive skill for children. Cubing takes this ability to the next level, constantly rebuilding the position of the parts, as well as continuously testing and expanding the child's sense of space. Another advantage of qubits: strengthening image recognition, says Felix Semdegs, speed record holder in Melbourne, Australia. When children learn to recognize what, say, a white square in the center of one side means that the yellow square is in the center of the opposite, they also study the building blocks of image recognition in music, mathematics and more. And of course, as kids get faster and faster, they push memory and finger dexterity too (hello, future surgeons!). Cuba's solution is one thing. Solving it quickly, very quickly is another. In fact, speed cubing, as it is called, has become a competitive sport. The World Cube Association actually hosts tournaments where cube lovers from all over the world commune and compete. Record for a quick 4x4 cube solution? Just 21.54 seconds!) Practice is the most important thing, says Semdegs, who is actually world record. It took me about three months to get my time under 30 seconds, but two years to get it down on about nine seconds. Since his first decision, Nate has been hooked on quping-trying different models, playing with more complex puzzles, and solving them faster and faster (he's up to 50 seconds for a 3x3 cube!). Our family now boasts at least 12 different cubes of different sizes and styles. With this skill right in his pocket, I think he can move on to his next hobby: rule the world, of course. I'm sure some people will ask why I made this cube, and what's the point of Tony Fisher saying during his voiceover video. But no explanation is required. From the dawn of civilization, man has responded to the call to build impractically large versions of things. The colors are fun, too. In a pair of new videos, Fisher shows off and shows off his giant Rubik's Cube with sides measuring 1.56 meters, or just over 5 feet, stating that his creation may be the largest in the world. Fisher walks around the cube, turning its various axis to show the viewer that it is real and it works. This mammoth toy will not be part of any Rubik's Cube speed contests; watching him turn, it's a bit like someone pushing a clumsy millstone. Not that Fisher minds. How he innes during the video: Guinness Book of Records in the only book I ever liked to read. This content is imported from YouTube.
