Home - The X10 Product Guide and Instructions of Choosing Results selection in the full page update on and off the lights with a non-ir remote is really easier and cheaper, then it looks and sounds. This how-to shows how to customize the x10 remote control for 2 lights. Also shows using machine labels to signify remote.x10 is the next step towards home automation. Can you imagine opening a garage with a remote control when you come home from work and also turning on the lights from another remote control? Looks like it will cost a lot of money and technical insight. But the truth is, and x10 Wiz people don't want you to know it, it's easy to do and pretty cheap. I took this remote control and 1 reciver for $20 in Radioshark. I got another reciver later. They can be really cheap on ebay. Here's a run down on what you need for this how-to. (1) x10 remote control (2) x10 recivers (2) lights that are connected to the wall (1) flat head scewdriver or other flat things Extra (1) brother label MakerPick two lights. Here's what I used block 1: PS2 neon sign unit 2: some random light bulbs select a light cabinet at the place where you want a remote control. Here you will put a reciver with an antenna. The other is transmitted over power lines, so it won't matter if you afind some lag. Because of this, removing the antenna one will disable the system. The first button is always the antenna, it can not be changed. This will be my PS2 sign. The second can be changed, but we'll get more into it later. 1) Set the manufacturer's label to the smallest size and bring in a ps2 sign or lamp room 2) print and cut the label from the manufacturer 3) compare the empty plastic shell on the label. 4) Cut to size 5) stick it in the shell and put it on. You don't have to remove the paper on your back. 6) Repeat for each lightLike I mentioned earlier, the main unit (with antenna) is the first UNIT. It should be installed on DOM A if it is not your second system. The second light is more complicated. Make sure it is installed on the same house as the above UNIT can be 2 or 3. But why not 4? The remote control has 4 buttons? If you read at the bottom it says BRIGHT and DIM. These control dimmer for UNIT 3. So if you want to dim that light you might. I think it's more of a hassle, so I don't use dim, and if you don't want to, you shouldn't. So for this how-to UNIT is set at 2.Time for almost the last step, and for the first time you will see your system running. 1) Take the Ps2 sign connector and disable it 2) Connect it to the main reciver 3) plug it back into the wall 4) do the same with Then press the first ON button. If it works, try the second one. If both of them don't work, check DOM and UNIT is correct, and make sure the main one is connected. If one doesn't work, turn off the reciver and make sure it works on its own. Mountain remote control be simple. Try to get it in a place that has shape and function. Right next to the light switch with some kind of double tape will work if it does not exceed the range. I just put it next to my bed, on my nightstand. It can go much further than two fires. Your home whoule maybe even a computer is controlled. Take a look at this, x10.com what you can do with this great system. 1 Table Contents 2 3 4 5 6 7 8 9 10 12 13 14 15 Phone Defendant turnson to 10lights orappliances fromany phonein the world! Soyou can tumon your air conditioning heater center before you leave work. Or you can cool yourvacation home when you arrive at the airport. You will never have to come home to adark homeagain. It is also aremote controlso youcan controlup to8 lightsand appli-ances fromanywhere insideyour at home. You can take on all the lights connected to the Modulesand WallSwitch lamp modules with the click of a button if you're making noise at night. You caneven turn off everythingin systemwith with one button when you go to sleep. It will flash aselected light orlights anywhere in the house when the phone rings (useful for hearing). CAUTIONBe very careful when you useyour TelephoneResponder withany kindof device. If you're not going to have this to turn on an anempty coffee pot, for example, you could burn up thecoffee pot in the heating, and even createa firehazard. It would be even more dangerous if the remote control was poured in to turn on the elertricheatcr that is on it. Ittransmits signalsto plug-ins over the existing home wiring. Youplug lamp modules, plug appliances into appliance mod-ulcs and replace light switches with SwitchModules wall. You can control everything. TheX-10 POWERHOUSE' Phone Defendant ModelTR551 OTurns onor offupto 10lights/appliances by phone rhe. O Controls the heating/air conditioning. You won't have a !ocome home toa cold or darkhouse again. Olets you remotely control up to no 8 X-10Modules fromany-where insideyour houses. You plugins and appliances in Modules.You can replaceyour wall switcheswith WallSwitch modules to control important external security lights. OSends signalsto Modules overyour existing housewiring (noadditional wiringnecessary). OKeep theTelephone Responderby bedside and tum offthe TVwithout getting out of bed. OTurn on ALLlights is connected to Lampand WallSwitch Mod de with the click of a button if youhear anoise at night. O Turn everything into the witrone button system.
