RE-IMAGINE

CREATE AMAZING SPACES WITH LESS LABOR. LESS COST. FASTER.

Each EmagiBlock® is designed with horizontal and vertical channels that allow for easy placement of electrical and plumbing.

Emagispace® has developed a sustainable building block technology that makes it possible to re-imagine the construction of interior space. EmagiBlock® is a versatile, reusable building technology that can be constructed – and infinitely reconfigured and re-purposed – in a fraction of the time, effort and cost of traditional construction. The patented, precision-built EmagiBlock platform is comprised of lightweight ABS plastic interlocking blocks, faced on both sides with environmentally friendly, medium density fiberboard panels (MDF), and turnkey assembly components such as headers, connectors, doors, windows, glass, trim, and finishes. Easily build elegant interior spaces, displays, and performance sets of all sizes and configurations.

WE MAKE IT EASY TO BUILD WITH EMAGISPACE®

Using your design information, we will provide you a comprehensive project design plan; specifying all the Emagispace components needed to build your project. Our team of experts are available 24 hours a day for input and insights throughout the entire building process.

DESIGN INFORMATION
From basic drawings to CAD renderings our team is here to help bring your project to life.

PROJECT DESIGN PLAN
From your design information we produce a project design plan that details all the Emagispace components required to build your specific project.

PRODUCTION
Our design and construction experts are available to consult with you about any product insights or issues throughout your building process.

Accent Wall

Privacy Pod

NEW EmagiKit™

EmagiKit Privacy Pods and Accent Walls provide cost-effective, easy-to-assemble, turn-key solutions for today's open office environments.
