The chart shows U.S. trades and dollars quarterly. Source: PwC CB MoneyTree Research™ Report for the fourth quarter of 2019 GLOBAL DEAL ACTIVITY, FUNDING DECLINES IN THE LAST KWART 2019 Global VC funding falls by 16% in the 4'19 quarter compared to 3'19 quarters. ASIA AND EUROPE SEE INCREASED DEAL ACTIVITY, WHILE NORTH AMERICAN DEALS FALL North American deal declines for second consecutive quarter in 4'19 quarter, four states more than double the investment while most decline. The graph shows the top 10 states by investment. Source: PwC CB Insights MoneyTree™ Report for the fourth quarter of 2019 worldwide, non-financial companies are increasingly integrating financial products into their service offerings. This emerging trend, called embedded fintech, is becoming increasingly apparent, according to the CB Insights report. In its report on the state of fintech No.2'20, the market exploration company shares the findings from the 2nd quarter financing data, stating that the trend towards embedded fintech applications is rapidly gaining momentum around the world and across all applications. The report cites examples of the Human Resources (HR) platform Gusto, which offers Cashout, a service that provides employees with salary advances, automakers like Toyota and Ford that use data to improve built-in insurance offers, as well as the real estate and rental market of Sillow, which has integrated fintech services as part of their services. Another highlighting this trend is the number of transactions and the amount of financing in the 2'20 quarter that went to companies allowing embedded fintech. These include Airwallex, Business Business (B2B) is a payment services provider that raised US\$160 million Checkout.com, a paytech company serving merchants from London that raised US\$150 million, and State Of The Name, a proptech startup from the US promoting mortgage closures that raised US\$123 million. by becoming, therefore, embedded. This trend has emerged in the last few years, with Apple, for example, launching the Apple Card in the US in August 2019. Amazon offers tremendously, a clear proof that embedded fintech in e-commerce works and can be very profitable. Growth in Payment Revenues Shopify, State of the State Fintech No. 2'20 Report, CB Insights Another key trend in the second quarter of '20 was open banking. New banking technology providers, including open provider API Setu and open banking platform Yapily, have received notable investments, and employees have begun to provide open banking services, the report said. The second quarter of 20 also saw notable growth in the e-commerce sector against the backdrop of the COVID-19 pandemic, as well as further consolidation in the retail capital management sector with the acquisition of personal capital, folio Investing and AdvisorEngine, the report said. Several fintech companies applied for public participation in the second quarter, possibly indicating a change in attitudes towards initial public offerings (IPOs) among mature fintech companies, the report said. Fintech companies that filed to go public in the second quarter include Lemonade, a digital tenant and homeowner insurance company, nCino, which offers cloud-based operating software to banks, Select'ur, 30-year-old insurtech, and Shift4Payments, an online point-of-sale (POS) provider. Fintech financing recovered in the second quarter, increasing it by 17% compared to the quarter (qo/q) to US\$9.3 billion. 1'17 - 2'20 (\$M), Fintech State Report No.2'20, CB Insights Mega worth \$100 million or more reached a new quarterly high of 28, with some likely to move toward companies with high levels of cash burning to help them get through the ongoing economic uncertainty caused by the COVID-19 pandemic, the report said. Global Number of Fintech Mega Rounds (\$100 MILLION), No1'15 - 2'20, State of Fintech No. 2'20 Report, CB Insights No. 2'20 saw the birth of one new unicorn fintech, Update, Neobank. In addition, the total number of venture fintech unicorns was 66, totaling \$248 billion. 66 fintech unicorns as of June 6, 2020, The State of Fintech No.2'20 Report, CB Insights KPMG and CB Insights are releasing their latest quarterly report on the state of investments in fintech venture capital (VC), highlighting the second consecutive fall in fintech transactions and dollars About KPMG Enterprise You know KPMG, you may not know KPMG Enterprise. All rights are reserved. KPMG (Registered) (partner firm with registration number. BA- 62445) has been transformed into KPMG Assurance and Consulting Services LLP (a limited partnership firm) with LLP Registration No. AAT-0367 effective July 23, 2020. In the recently unveiled CB Insights third annual list of leading private fintech companies, business automation, the growth of e-commerce and changes in the financial payments market are among the key factors influencing venture capital investment. In a report by Fintech 250: The Top Fintech Companies of 2020, a cohort of companies raised approximately \$49.2 billion in total financing for nearly 900 transactions since 2015 and includes start-ups at various investment stages of development, from early-stage companies to well-funded unicorns, it said. Company. Other findings of the report include that year to date, 250 fintech firms have raised \$10.3 billion in capital 120 trades. The report also notes that 32 companies are unicorns, which means they have an estimate of more than \$1 billion. Here, CB Research fintech analyst Alex Kern shares ideas on some of the key takeaways taken from this year's report. WWD: Were you surprised by any of the trends in this year's rankings? Which and why? Alex Kern: The fintech 250 is a great source for determining what financial challenges are becoming the focus for the best entrepreneurs and teams to solve. We have made a new category this year, Accounting and Finance, due to the huge number of companies in the rankings that help businesses automate these core business functions. And half of the companies in the category are at an earlier stage (the last raised either Series A or Series B). This was surprising, in part, because each company operates its own back office differently, so creating software that can integrate into workflows on a scale is a big challenge. But there are a number of companies like Spendesk that have a big boost and we expect this to become a greater focus in fintech. WWD: What is the driving force behind VCs to invest in fintech? A.K.: There are many secular trends that have created opportunities for technology to provide an improved product or service within financial services. The main ones in retail space include cash in digital and the growth of e-commerce, especially in the face of a pandemic. But these two trends present a number of other challenges to solve, such as improving the online exit experience, where basket waiver rates still range between 60 and 80 percent. Just in this interaction alone, there are issues such as the ability for the seller to accept payments, the ease with which consumers can pay with their payment of choice, the ability for consumers to get financing options at the checkout, and how businesses can better ingest and understand the data that come along with these online purchases. These are just some of the many issues that the fintech sector is addressing now. WWD: What are some of the notable attributes of top unicorns? A.K.: Of the unicorns in the list of 11 are under Payment processors and networks, which confirms the large payment market around the world (b-t-b, b-t-c and p-t-p). More generally, all companies are focused on large markets, have performed well either to acquire market share or build new markets for themselves, and have demonstrated consistent growth on several indicators we are tracking.
