Our magazines have different formatting requirements, so please visit individual magazine websites to learn more about word limits, structure or style at home. Before you submit the manuscript, make sure you have passed the below checklist and prepare and submit a guide. Basic checks Make sure you send the final version of your manuscript. Once your manuscript has been accepted for publication and received by the Oxford University Publishing House, no further changes can be made. Do not submit documents to Oxford University's publishing house if they have been published elsewhere or are being reviewed for publication elsewhere. If your article uses numbers, tables, or parts of text published elsewhere, you need permission from the copyright holder. Please consider the rights and permissions for details. Send the document as a Word or LaTeX file. Be sure to include the headline, all the authors' names and affiliations, as well as the author's email address. Check the magazine's website for any style elements associated with the magazine or specific topics, such as JEL keywords or codes. Provide an annotated that avoids abbreviations or links. Identify all non-standard acronyms when they first appear. Room tables and numbers, make sure they all have a legend. Determine the value of any bold or italic formatting in the tables. The numbers should be high-resolution and in the overall image format (e.g., .eps or .tif). All links must be readable and accurate. You don't need to format links to the style of the magazine when you first submit your work. Include confessions, conflict declarations and details of funding sources and grant numbers or special characters. Don't use images. Times New Roman and Arial Unicode MS usually provide the widest range of characters and special characters. Once we've reviewed your manuscript, we can ask for edited files, higher-resolution numbers, or redacted files to match the style of the log. A guide to preparing handwritten language services if you are unsure of the quality of your English, you can use the language editing service to make sure that editors and reviewers understand your work. Language editing is optional and does not guarantee that your will be accepted. Edited manuscripts must still be reviewed by the journal. The numbers you have to include the names of the figures and legends in the manuscript file should not be included in the image file. You have to present each piece as a separate image file. Send all panels figure on a page in one file. For example, if a figure has 3 panels, the figure must be represented in one file. Each panel should be marked as a letter (A, B, C, D, etc.) in the top left corner of each panel. Images of photos or paintings can be provided as raster images. Common examples of raster images are the types of files .tif, .tiff, .raw, .gif and .bmp. The resolution of raster files is measured by the number of points or pixels in a given area, called dpi or ppi. Minimum resolution required for printed images or images: 350dpi minimum resolution for printed art line: 600dpi (complex or finely drawn art lines should be 1200dpi) minimum resolution for electronic images (i.e. to view on screen): 72dpi Images of maps, diagrams, graphs and diagrams best displayed digitally as geometric figures. Common file types .eps, .ai and .pdf. The .eps files will be converted for online publishing. Vector images use mathematical relationships between dots and lines connecting them to describe an image. These types of files don't use pixels; therefore, the resolution does not apply to the image vector. Figures produced as .doc/.docx or .jpeg/.jpg files may not be accepted. The numbers can be provided using RGB or CMYK color space: please note that the figures submitted to the RGB will be converted to CMYK for print publication, and the figures submitted to CMYK will be converted to RGB for online publication. Note that using red and green in numbers can cause difficulties for colorblindness. For advice on how to avoid this problem, please . Tables deliver any table in an editable format (such as Microsoft Word) rather than as an image file. Avoid over-formatting, such as using color and shading that is not replicated in the published web version, and using tab intervals to indicate alignment. Make sure that any formatting or superscript symbols, such as asterisks, are explained in a table footnote. Leave units in a column or in-line blanks, not in the table case. All the tables submitted must be included in the article.com.based. Additional material If you are considering whether to include additional material in your work, carry the following online Additional material should enhance the written article without being necessary to understand it. Additional material will only be available online and will not be copied. Additional content should be presented in a separate file to the main article. File names should be self-evident (e.g. additional figure 1). materials must be included in the text of the main manuscript. Additional material files should be no more than 2MB each. The style and formatting of the additional material must be consistent with the style of the manuscript. Additional materials should be to function in any internet browser. Additional content can be posted on the OUP website or on one of our preferred affiliate sites, such as Dryad. Content posted elsewhere (such as the author's personal or institutional website, Google Docs, Youtube) is not allowed because the links may expire. Funding Cite all funding for your research, providing grant numbers and sponsor's name. If the sponsor is listed on the Crossref sponsors registry, the sponsor's name should appear just as it appears in that database. Where subsidies are received by specific members of the author's group, they must be determined by the original. See this page for more information on the agency's funding requirements. LaTeX If you use LaTeX, then look out for the following: Some magazines provide LaTeX templates and class files: check the log websites for details. Many OUP magazines also have templates available in Overleaf. If the magazine doesn't make the LaTeX template available, make a PDF output using article.cls, follow the log link system using the webbeat and the bibliographic environment. Don't use locally created macros or style files. For automatic links to numbers, tables, and reference quotes, use common LaTeX tags such as ref, cite etc. Send us all support files (including any .bib files used) along with the main .tex file. Just submit the macros used in the manuscript and don't represent the entire macrobiblio library. OUP LaTeX Template OUP LaTeX creates manuscripts that meet the formatting requirements of the journals listed here. The template is available on the Overleaf.com, on CTAN, and as a direct download by clicking on this link. Check whether your chosen log is supported by referring to the list associated with the above Access to the LaTeX package on the Overleaf.com or download by following the links above Select the relevant class options from the list at the beginning of the main .tex file, commenting on other options if necessary, adjust the headlines and style of citation, using the instructions below Check the magazine's website for any additional requirements before submitting if the magazine you have chosen is not listed here check the magazine's website in case a special LaTeX package is available. If the package is unavailable, we recommend that you create an outlet with article.cls where possible, avoiding any local macros or special formatting that may be difficult to reproduce during the final publication process. Specific sections in the template may need to be added or removed as required by the log. If any elements of the manuscript (such as numbers, tables, display equations) fit poorly page design, consider scaling, introducing a new float environment or inserting a hard break. Items can be adjusted to achieve the optimal layout of the page during the publication process. Received/revise/accepted Received/revise/accepted fields can be ignored: they will be inhabited during production. Any redundant files from the package must be deleted before being sent. Further guidance is available in the file package. For general help with using LaTeX, with m. The table below describes how to customize the basic formatting options in the template: Element Settings Instruction Page Design Traditional, Modern, Modern Select appropriate version of the documentclass at the beginning of the template .tex Page size Small, medium, Select the appropriate option documentclass at the beginning of the template .tex Columns Single or Double Column Large and Medium will default 2-column layout, uncomment declaration nocolumn, if required Headlines Numbered, Unnamed Switch between numsec and unnumsec in the declaration Documentclass quotes Numeric (Vancouver), alphabetical numbers (numbered by the referee in alphabetical order) footnotes for numerical, add bibliographystyle for the alphabet For the author-year, add bibliographystyleleabrvnat For footnote quotes see here Video videos to be presented as .mp4 file type , in the highest possible resolution, and include another image to submit the video to the PDF print. If they come along with the manuscript and are given in the text of the article, the published videos will be displayed as streaming content in the article case. We cannot use videos posted on third-party sites such as YouTube because the link may expire. 3D figures On some of our journals, authors can submit 3D models for online publication as part of the article. Check the author's guide to the relevant journal to see if this is an option and find further instructions. Guide to sending a manuscript To send a manuscript go to your magazine's website and click send. Online view support If you need help with views in ScholarOne, please contact them or contact ScholarOne. For editorial views of the manager, please see their support pages or video guides. ORCID We encourage authors to provide ORCID IDs during the submission of the manuscript. For more information, please visit our ORCID page.
