Livewire: Livewire is a sophisticated software for designing and imitating electronic circuits. Switches, transistors, diodes, integrated circuits and hundreds of other components can be used to study chain behavior. There are no restrictions on what one wants to design, and there is no concern about the number of items to use, Livewire has them all. However, if the maximum component limits are exceeded, they will explode on the screen. **PCB Wizard:** PCB Wizard is a powerful software for the design of circuit boards, whether one or double layer. It provides a good number of tools that cover all the needs when designing a standard PCB, includes schematic drawing, schematic transformation into diagram, positioning of components, self-directing tracking and BOM reports. It also includes a number of tutorials to learn how to handle the program almost perfectly. Share on social media... OP Auto Clicker Expert software applications Academia.edu no longer supports the Internet Explorer. To browse the Academia.edu and the wider Internet faster and more securely, please take a few seconds to update the browser. Specialized programs are available for testing electronic circuits. Livewire is one of these editors of electronic circuits, perfect for drawing as well as for checking through the animation and sounds of what their behavior will be. If you need to test for design failures, you can simulate their behavior and detect errors if they exist. Solve the problem early on and save valuable working hours. Features a Virtual Lab for the development and execution of electronic chain simulations. Includes textbooks and tutorials to get started with the program. A variety of examples as templates that can be adapted to projects. It contains all kinds of components for tests: coils, resistors, transistors, integrated circuits... Sophisticated software for designing and imitating electronic circuits. Work comfortably and without drag restrictions and drop any of the hundreds of components included in the software to start designing the electronic circuit. The possibilities are so great that there are no restrictions on design outside of the discipline. Connect the components and watch the simulation game.
