and i did the same to a very clean install of ubuntu 11.10 i can't figure it out babalu: if you are useing Wubi, get a real dual-boot system my bad i got a real dual boot Wubi is a bit of a worst case.. use it for testing i was thinking about that but i thought it was interesting well i'm gonna remove wubi Wubi is like flase reality and see if that does it thanks for your help Wubi can cause all sorts of issues  
yeah i know i'm just trying it out i have it to install an old version of ubuntu you are doing testing not using wubi i think. You can remove Wubi and reboot :) okay good to know given it a try :) i will time to go to work for me see ya all. willis, thanks! Dr\_Willis, i will can anyone give me any tips for a fresh install of Ubuntu without the GUI. I need a headless installation of a KVM, but my init scripts in /etc/init.d aren't starting on boot and just in case anyone cares, I've also installed the OS from USB on a machine with a broken keyboard. I've updated grub2-common on the USB, which was my biggest problem. I like gnome 3 I have a problem with gnome-terminal: i can't get the app out of fullscreen when i press f11, it doesn't matter the screen size i use. I have nvidia-304 also, i 520fdb1ae7
