

MOBILE APP DEVELOPER INTERN

SOLARIS OFFGRID

Internship in Valencia, SPAIN

What's the job?

We are looking for a talented **Mobile App Developer Intern** to join our super team in Spain and help us in providing solar energy for rural homes of sub-Saharan Africa.

We develop smart hardware and management software technologies that allow us to provide electricity to more than 15000 people in Tanzania alone, adding hundreds more every month and we hope to do a lot more with an extra person onboard!

We are also expanding our technologies to partners (in over 12 developing countries up to date) and expect to impact millions of people over the next 3 years, across the Globe.

We are looking for:

Smart people
... who are software engineers
... like mobile development
... are excited about learning new things
... are independent
... and work well with others

It's best if you already know Angular/Ionic and some Python and have some practical software development experience. It's also better if you also have experience in Agile and TDD. Bonus point if you also like UI/UX design and/or Typescript.

If you're missing some of that and think you still have the chops, we say go for it.

What's the deal?

You'll need to be willing to move to Valencia, Spain as soon as possible. Our office is 5 min from the beach, which we think is pretty cool. Compensation: 400 EUR per month.

Apply!

Send us a quick email (jointhetechteam@solarisoffgrid.com) with your resume and tell us why you're excited to join us.
