Written with the latest exam format in mind, this title provides a short, logical approach to the problems that you are likely to encounter in MRCP 2 PACES. It closely follows the current marking scheme and highlights how you can score high on all domains rated in each station. The comprehensive clinical evaluation of Station 5 continues to be of great concern to PACE candidates, so this book outlines how best to approach the ICA and structure its performance to achieve maximum scores. With the MRCP PACES Guide soon to go for full sale, we asked author Ben Mallish to tell us more about this book and what makes it different from the existing PACE titles. What readers can expect from the MRCP guide Instead of trying to write a medical encyclopedia, we tried to write a book that presents all the relevant details that PACE candidates need in a clear, structured and logical format. Throughout, we as authors have tried to try to build on our experience in training PACE candidates to highlight areas that people often find difficult and where they may unnecessarily miss the mark. We know that many people who review PACE do so while working in jobs; As such, we worked hard to make the text layout as uncluttered as possible, and added as many tables and diagrams as we could, so that the book is as accessible and easy to read as it can be. How would you recommend that readers use the book as part of their revision plan? The key to passing MRCP PACES is seeing as many patients as possible and being confident in developing an organized management plan based on available information. We recommend that once readers have seen a patient in a ward or clinic with a specific problem, they then use the book as a guide to remind themselves of the key areas to look at when assessing a patient with a particular problem, and teach them how to logically present their findings and address the issues they are likely to be asked. How can the written material in the MRCP PACES Guide help candidates prepare for a clinical trial? The book contains clear explanations of the relevant history, expertise, elements of communication and scenario management, usually occurring in the PACE IHKP. However, instead of just packing as many facts as possible, we have tried to be practical and throughout the rather thorough approach to common problems that can be identified when considering. We have mapped this closely to the current marking scheme for MRCP PACES, and we are constantly emphasizing how candidates can strive to score high marks in all areas assessed in each station. However, our ultimate goal, in fact, is that this is not just a book to prepare people for examination, but a practical, easy-to-read guide that all doctors will find valuable in a ward or clinic - even if they don't sit MRCP PACES! What distinguishes this name PACES from others that are out there? In recent years, the PACE examination has been extensively revised, especially in connection with the reorganization of Station 5. In the new Integrated Clinical Assessment (ICA) station 5 candidates must take a targeted story, conduct a targeted survey, solve patient problems and formulate a management plan in just a few minutes. It is one of the few books available written with a new exam format, and in particular the head of Station 5/ ICA; this not only contains factual information for general scenarios, but - perhaps more importantly - it gives candidates a short, logical plan for how they should approach the ICA, and how they can best structure their metrics to optimize their chances of scoring as much as possible. If you were give one piece of advice PACE candidate, what would that be? People who pass PACE are not necessarily the smartest or those who remember most of the facts; instead they are people who are thorough, organized, and who think logically when interacting with patients, even when they are under pressure, and who always keep the patient in the care center.
