# Industry Supports and Experiences

# Problem with enterprise secure web gateway

- 1. 0.1% fail costs millions** : Signature based, accuracy varies and cannot protect zero day or targeted attack
- 2. Heavy duty infrastructure** : Require VPN connecting to office network and use office gateway to access internet (example : Cisco Secure Web Gateway)
- 3. Cannot handle new attacks**: Cloud based gateway uses DNS to filter malicious website. Cannot protect links in hacked website

**How to reduce risk and at the same  
time lower IT costs when  
WFH home?**

We have answers

# Our solutions

Generate on-demand, safe and clickable web content using disposable browser session

- Web Isolation within browser, 100% air gap protection
- No software install, no network change
- Use employee home network, not need to connect to office network via VPN

# Product Values

- To END USERS : Instant and 100% protection when visiting website link
- To IT MANAGERS : More relax policy on website visits, increase speed and user satisfaction on website visits
