Ionic 3 design templates free

With Ionic, creating a high-performance cross-platform mobile app is as easy as creating a website. In fact, if you're an experienced web developer who wants to be an Android or iOS app developer overnight, you just need to install and start installing Ionic. I assure you, you will take him like a fish to the water. However, building a feature-rich Ionic application with an elegant user interface can be more challenging for finding natives across multiple platforms. Fortunately, using ion templates can save you a significant amount of time and effort. CodeCanyon is one of the largest online markets for ion templates. No matter what your application requirements are, codecanyon is likely to have a template. This article lists the 15 pending Ionic templates you want to use this year. 1. Code Generator, Ionic Mobile App Builder, or Ion Mobile App Builder developed by short Ioni CAM is an award-winning template that allows you to create both static and dynamic ion applications without writing any kind of code. It provides a very intuitive web-based interface that you can use to define all aspects of your application. More precisely, it is possible to simply create and complete some forms in your browser to configure all the UI components of the application, including navigation menus, menus, pop-ups, tables and pages. However, the best part of this template is that your app can interact with a variety of data sources, such as WordPress, WooCommerce, and other content management systems with THE JSON API. 2. IonWordpress IonWordpress, developed by elite author IonicThemes, is a template that you should use to turn your WordPress blog into an amazing Android or iOS app. This is one of the most popular topics in CodeCanyon, and for good reason: it has more features than you can imagine, good documents and easy-to-read code. In addition to WordPress related features, this template provides push notifications, mobile ads via Google Admobile and Apple iAd, and an in-app browser. 3. Material UI Ion Design Developed by Elite author CreativeForm this template is for ion developers who don't want to waste time designing their own applications. There are also well-organized Sass files that contain dozens of variables. Change the look of your app to more customization. To avoid processing multiple image resolutions, this template contains icon fonts with more than 800 icons. If you need to use an image, it also supports multiple blending modes for the image. 4.IonStore IonStore, developed by Ioniq Premium, is definitely a template to consider if you are creating an e-commerce application. It allows you to quickly create a beautiful app that can connect to your WooCommerce website and extract data and settings from it. It supports multiple payment methods, languages, and currencies. It's also very customizable, allowing you to have more control over how your app looks. And as if that wasn't enough, it also supports discount badges, user registrations, order tracking, and notifications. It is also worth mentioning that this template is very well documented and you can see regular updates and bug fixes. 5. Catalog Ion Catalog Ionic developed by Appseed is a common business oriented template. If you want to create an app that can run your business and showcase your products, this template may be necessary. You can also display useful information, such as opening hours and contact options for your store. If you already use WooCommerce, you can configure this template to read the data. Catalog Ioniq's architecture is very modular. It was also built using the very popular Yeoman generator for the Ionic framework, so you can be sure you're following some good practices. 6. Barebones Ioniq Barebone Ion is a large, feature-rich initial template developed by appseed. Developers can use this on to start almost any type of application.
