When loading F safe - on a new installation from Victory 10..it seems to be stuck for a long time when it comes to clean frame work 4.7.2-installation.is is it normal or malfunctioning? in any way the leadership broke the connection is done .. for a later attempt..... and in what order is best after a fresh installation off to win 10.download widows upgrade or going directly? f secure? to download antivirus program? When trying to install the .NET Framework 4.7.2 version, it gets stuck on the installation and freezes here: I waited more than an hour to install the .NET Framework, and it stayed in the same place. I tried to cancel the installation and it stuck to roll back the installation as well: Is there anything I need to change on the OS to be able to install the .NET Framework? I don't know why he's stuck in this place, and any advice would appreciate it. I needed to install .NET 4.7.1 to allow the Exchange 2013 upgrade to CU 21. This installer I downloaded and tried to install: but the installation never ends. It remains stuck without progress in the Installation Progress Bar. Tested both offline and online installations: To install .NET Framework 4.7.1 download the msu package on the following link: it seems that there is some problem with a different format, but msu worked properly for me. Update - For Windows Server 2016 (Thanks to Ryan comment): If it works in the same problem when installing CU10 for exchange 2016 msu .NET 4.7.1 for Windows Server 2016 here is this: Arma 3 qgt; Dysku sie og'lne qgt; Shegegi cotton wool stuck to install Microsoft .NET Framework 4.5.1.cmd Hey guys trying to play a little Armagh today but stuck to Microsoft's Installation .NET Framework 4.5.1.cmd. I tried to install .NET Framework outside of steam, but when I double click to run .exe nothing opens or happens also restarts my computer, but still happens. I run Window 8, by the way. Uwaga: Ta funkcja powinna from u'ywana tylKO do zg'szania spamu, reklam, oraz problematycznych post'w (n'kanie, walki i obsceniczno). In case you're trying to turn on the 'ON'.NET Framework 3.5 on your computer and it freezes and you're looking for a solution, your search ends here. Follow these corrections of this article and the problem will be solved very quickly. But before you go ahead for big solutions, try these simple workarounds on your computer. Bypass paths-1. If this error occurs for the first time on your computer, restart your computer and after the restart try to turn on .NET Framework 3.5 'ON' again. 2. Check if any Windows update is under consideration computer or not. If any update is under consideration, let Windows update your computer. Computer. any of these workarounds don't work, go for these solutions-Fix-1 Empty SoftwareDistribution folder and run DISM- 1. To open the Service window, you must enter Services in the search box. 2. Then what you need to do is click on the Services in search. 3. Scroll down and find windows update in the Services window. 4. Double click on it to open its properties. 5. In Windows Update properties, click on the Start Type button and select Automatic. 6. Check whether the Status service is Run or not. Otherwise, click on the Start button to start the process. 7. Then finally you have to click on Apply and OK to save the changes on your computer. Close the service window on your computer. 8. Click Windows to run Run, then copy-paste that line and press Enter to open the download folder. C: WindowsSoftwareDistributionDownload Note- Replace the letter C: with the letter of your Drive installation Windows. 9. Here, select all the content here and then click Delete to clear the folder. Close the File Explorer window. 10. Then click on 'Windows key'R. 11. As soon as the Run window opens, enter cmd and then press the OK button. 12. Copy this command and paste it into the CMD window and then hit Enter. Dism /Online /Cleanup-Image/StartComponentCleanup Close the team window promptly. 13. You need to click 'Windows key'R. 14. Then click optionalfeatures and click on the GOOD button. 15. In the Windows feature window, click on .NET Framework 3.5 (includes .NET 2.0 and 3.0) and then click on the OK button to enable the feature on your computer. .NET Framework 3.5 will be turned on 'ON' on your computer without further problems. Your problem must be solved. If the above method doesn't work for you, you should try the offline installer .NET Framework 3.5 by following any of these methods- Fix-2 Install .NET Framework using cmd- During this installation process, you'll need a Windows 10 DVD (from which you installed Windows 10) or any media installation download (such as a drive handle or any other flash drive). 1. First, you need to connect Windows 10 to install the drive. 2. Click Windows to open the File Explorer window on your computer. 3. Then go to this computer and pay attention to the DVD letter drive or flash drive (Suppose it's G:). Close the File Explorer window on your computer. 4. Now you need to open a team request. 5. Enter cmd.exe in the search box and click Ctrl-ShiftEnter together. 2. Now enter or paste this command and hit Enter. Dism/online/enable-feature-feature:NetFX3/All/Source:'source:'sources'sxs/LimitAccess (NOTE- Replace G: with a Windows 10 email drive installation on your computer.) Wait for some because this process may take some time. That's it! .NET Framework Framework will be installed on your computer. Fix-3 Run Batch File - In case the previous process throws up any error in Command Prompt, download and run this batch file on your computer, and .NET Framework 3.5 will be installed. First, download net35 on your computer. Once you've downloaded the batch file, go to the downloadable location. 2. Then remove the net35 file in the place of your choice. 3. Go to the mining site on the disk. 4. Double-click on the Set .NET Framework 3.5 button via DISM. A command prompt window is open. Then you will be installed .NET Framework 3.5 on your computer. Sambit is a mechanical engineer by qualification who likes to write about Windows 10 and solve the strangest possible problems. 29 NOV Customer was really annoyed by the issue when installing PDF Creator - a free PDF solution. It turns out that PDF Creator requires the launch of a .NET 4.0 customer structure. And before the actual PDF software is installed, the .NET 4.0 installer performs. To make things annoying, the installer gets stuck while installing a .NET customer profile framework at 0%, and nothing happens. No changes to the task manager's memory or the use of the processor for the installation process either. How did I solve the problem? Microsoft websites have no BTW response. Besides, I didn't need to rename the SoftwareDistribution folder to c: Windows. What did I do to solve the .NET 4.0 installer stuck to installing a customer profile? 1. Turn off the Windows Updates 2 automatic installation. Turn off Windows 3. Reboot your PC and start installing .NET 4.0 After successfully installing .NET 4.0 after these edits, turn the Windows update back on.
