[Contribute] The basic goal of the package manager is to make it easy to install an AVR Programming Tool, such as AVRDude, that requires no external libraries. As we are living in the digital age we are constantly faced with the problem of libraries that we use to write, upload, and debug AVR code. For example, if you want to add a debug capability to a serial data streaming application you must first add the required library to the programmer or firmware. So far, we've been able to remove the need to do that by packing and unpacking the application in AVRDude. This package manager solution means that only one AVRDude binary needs to be available, for any platform. You will need to download the tool and modify the file configuration. AVRDude has some options that you can change using the command line. Otherwise, you can choose the default settings for AVRDude. We have packaged the library AVR Tools:AVR_Tools_BASCOM. This package contains the necessary C code to replace the compiler from AVR Studio/AVRdude. The new tool, AVRDude_BASCOM.exe, needs to be placed in the same

directory where you installed the package. The following packages are available:

AVRDude_BASCOM_Microsoft_Windows.zip (1.10 KB) BASCOM-AVR_Microsoft_Windows.zip (1.28 KB)
AVRDude_BASCOM_Microsoft_Windows.bin (105 KB) BASCOM-AVR_Microsoft_Windows.bin (105 KB)
AVRDude_BASCOM_Microsoft_Windows_ARM.zip (2.28 KB) BASCOM-AVR_Microsoft_Windows_ARM.zip (2.28 KB)
AVRDude_BASCOM_Microsoft_Windows_ARM.bin (124 KB) BASCOM-AVR_Microsoft_Windows_ARM.bin (124 KB)
AVRDude_BASCOM_Microsoft_Windows_Apple.zip (1.26 KB) BASCOM-AVR_Microsoft_Windows_Apple.zip (1.26 KB)
AVRDude_BASCOM_Microsoft_Windows_Apple.bin (117 KB) BASCOM-AVR_Microsoft 520fdb1ae7
