Ketonax Shampoo PatientCetoconazole Information Pharmaceutical Form and Shampoo Presentation in Packaging with 100 ml Bottle shampoo Topical Use1 Adult Use Common Information Sign: Keax ShampooActive Principle: KetoconazoleThereTherapist Class2: AntimicitiCS Composition3 contains 20 mg of ketoconazole. Emitted: salt acid4, water, sodium chloride, diethanolamine coconut fatty acids; Polyethylene diochloridglycol-120 methyl glucose5, red bloodline sodium, sodium hydroxide, ymidazolinilurea, sodium lauletersulfate, lauril ether ester sodium sulfosuchinat, hydroxypropil lauryl collagen dimon6 hydrolysis and perfume bouquet. How does this medicine work? Ketoconazole, the active ingredient in Ketonax Shampoo, acts on fungi and yeast, causing pityriasis versicolor, seborroid dermatitis7 and dander, releasing pruritus8 and peeling9. Why was this medicine mentioned? Ketonax shampoo is indicated for dandruff, seborrough dermatitis7 (seborrhea10, oil) and pityriasis versicolor (white tissue). When should I not use this medicine? Contradictions You should not use Ketonax Shampoo if you knew the sensitivity to any of the components of the formulation. Symptoms11 of the highest sensitivity of itching and redness of the skin12 after application. Warnings of seborrhae dermatitis7 and dander are often associated with hair loss13. When Ketonax Shampoo is used in these conditions, it can also occur. Pregnancy14 and Breastfeeding15 Although Ketonax Shampoo is not absorbed by skin12, tell your doctor if pregnancy occurs14 or breastfeeding. Concentrations of ketoconazole plasma were not detected after a local introduction of Ketonax Shampoo on the scalp of women who were not pregnant. Plasma levels were detected after a local introduction of Ketonax Shampoo throughout the body. There are no known risks to using Ketonax Shampoo during pregnancy14 or breastfeeding15. Precautions Avoid eye contact16, if this happens, rinse your eyes16 with water. Medicinal Interactions If you use corticosteroids in the form of cream, lotion or ointment, you can start treatment with Ketonax Shampoo together, but it should be noted that the corticosteroid withdrawal should be done step by step. Otherwise, skin12 may represent redness or itching8. You should take a break as follows: - Apply the same amounts for 1 week; - Make a gradual withdrawal of corticosteroids within one to two weeks; - Then discontinue treatment with corticosteroids completely. There are no contraindications for age groups. Tell your doctor or dentist if you have a reaction doctor or dentist if you use any other medication. How should I use this medicine? The physical aspect of Ketonax Shampoo is a viscous liquid of pink coloring. The organoleptic characteristics of Ketonax Shampoo features a herbal flavor. Dosage Frequency of use of Ketonax Shampoo will depend on the type of infection17 and whether the use is intended to treat or prevent infection17. To treat dandruff and seborrh dermatitis7: Use shampoo twice a week for 2 to 4 weeks. To prevent the appearance, use shampoo once a week or once every 2 weeks. To treat pityriasis versicolor: You should use shampoo once a day for 5 days. To prevent the appearance, you should use shampoo every year until summer, once a day for 3 consecutive days. As you use you should apply Ketonax Shampoo for the affected parts, and leave to act for 3 to 5 minutes before rinsing. Typically, palm18 full deshampoo is enough for washing. Rest assured that you have applied the medicine to your skin12, not just your hair.13 Avoid the fact that the product comes into contact with the eyes16, if it happens, wash your eyes16 with water. Follow as you use it correctly. Without disappearing symptoms11, seek medical advice. Do not use overdue medications. Before applying, watch the appearance of the drug. What harm can this medicine cause? As with other shampoos, local burning, itching or redness or irritation may occur. Rarely, oil and dry hair can occur, as well as changes in hair color13, especially in patients with gray hair or in hair, which are often treated (discoloration, permanent, and others). In very rare cases, there may be hypersensitivity reactions (allergy19), hair loss13, rash20, hives21 dry skin12 and other reactions at the site of use. If shampoo is intolerant, do not continue treatment. What if someone uses a large amount after a one-time treatment? No reactions are expected with the exacerbation of topical use1 Ketonax Shampoo. All in all, it's not serious to ingest Ketonax Shampoo, if this happens, you should see your doctor. Where and how to store this medicine? Keep the bottle tightly closed. Store Ketonax shampoo at 15oC to 30oC. Protect from the light. Technical information for health professionals22ketoazole Pharmaceutical form and Presentation Shampoo in packaging with 100 ml bottle of shampoo Topical use1 Adult Use General Information and Technical Brand: Ketonax ShampooActive Ingredient: KetoconazoleThereThere Therapeutic Class2: AntimicitiCS Composition3 contains 20 mg of ketoconazole. Excipients: salt acid4, water, sodium chloride, coconut fatty acids; Polyethylene diochloridglycol-120 methyl glucose5, red bloodline sodium, sodium hydroxide, ymidazolinilurea, sodium lauletersulfate, lauril ether ester sodium sulfosuchinat, hydroxypropil lauryl collagen dimon6 hydrolysis and perfume bouquet. Pharmacomatic featuresPharmaconic properties Ketonax (ketoconazole) is a synthetic derivative of dioxolano imidazole, with powerful activity against dermatophytes such as Trichophyton sp, Epidermophyton sp, Microsporum sp and yeast such as Candida sp and Malassezia furfur (Pityrosporum ovale). Ketonax Shampoo promotes pruritus8 relief and peeling9 is commonly associated with seborrej dermatitis7, pityriasis capiter (dander) and pityriasis versicolor. The pharmacokinetic properties of plasma concentrations of ketoconazole have not been detected after the local introduction of Ketonax shampoo on the scalp. After applying Ketonax Shampoo throughout the body, plasma levels of ketoconazole were detected. Effectiveness ResultsIn multicenter study, ketoconazole in the form of shampoo was effective in the treatment of moderate to severe seborrhormal dermatitis7 and dandruff in 575 patients, with 88% response, and as a prevention from relapse23 in a double-blind 24placebo25 controlled study in 312 patients.1 Ketoconazole 2% shampoo was widely studied compared to placebo25 in more than 2,000 patients with dandruff and seborrh dermatitis7. In initial double-blind, placebo-controlled studies determining the dose25, several concentrations of shampoo were compared in 180 patients with dandruff or seborrook dermatitis7 and it was found that treatment effectiveness was associated with the concentration of ketoconazole. A total of 91% of patients using ketoconazole 2% shampoo and 82% of patients using ketoconazole 1% shampoo demonstrated a marked improvement, or normalization of their conditions, compared to 33% of those who use placebo25 (p 0.001).2Referncia 1.
