## Behavioural neuroscience breedlove pdf

The eighth edition of S. Mark Breedlove and Neil W. Watson October 2017 ISBN: 9781605357430 816 pages Paperback Price: 44.99 pounds A broad view of neuroscience, which introduces evolutionary and development perspectives, examines a range of behaviors, and explores clinical applications of studies. Description of the author (s) Table of Content Additional Resources, published by Sinauer Associates, an imprint of The Oxford University Press. Behavioral Neuroscience, The Eighth Edition, provides students with a live overview of the area. It offers a broad perspective, covering the cutting edge of neuroscience, clear descriptions of behavior, evolutionary and development perspectives, and clinical application of research. Despite this comprehensive range of materials, the authors sought in the latest revision to expose the concepts of neuroscience underlying behavior with concussion and clarity. The training is supported by a best-in-class full-color art program, including hundreds of original illustrations that make it easy to understand the structures, mechanisms and processes in the brain. Many additional graphic elements have been replicated from the main sources of research, bringing the learner closer to the science behind the subject. Each chapter includes a special feature called The Cutting Edge, which emphasizes prior to discovery or technical innovation, while illustrating the logic and methodology of experiments and hypothesis testing. Each chapter ends with a unique feature, Visual Summary, a poster-like layout that provides a graphic overview of the chapter's main themes and guides students to the numbers and online animations that amplify each point. The text is supported by a rich set of Internet resources. More than 500 new links keep the text up-to-date and an excellent resource. There is also an e-book with features, navigation features and links that offer additional training support to S. Marc Breedlove and Neil V. WatsonS. Mark Breedlove is Professor of Neuroscience at Barnett Rosenberg University, Michigan State University. He has written more than 130 scientific papers exploring the role of hormones in shaping the developing and adult nervous system, publishing in journals including science, nature, nature neuroscience, and the Proceedings of the National Academy of Sciences. He is also passionate about teaching in the classroom, and in a larger community through interviews with the Washington Post, the Los Angeles Times, the New York Times, and Newsweek, as well as broadcasting programs such as Things Considered, Good Morning America, and Sixty Minutes. He has active grant support from the National Institute of Neurological Disorders and Stroke and the National Institute of Mental Health. Dr. Breedlove is a member of the American Association for the Advancement of Science and the Association of Science.Neil V. Watson and members of his laboratory at Simon Fraser University in Vancouver, Canada, study gender-related aspects of the structure and function of the nervous system with ongoing grant support from the Natural Sciences and Engineering Research Council of Canada. His research, which covers the effects of hormones and pollutants on the structure of the nervous system in the relationship between social factors, cognition and steroids in the human body, has appeared in various journals, including the Journal of Neurology, Proceedings of the National Academy of Sciences, and Brain Research. Dr. Watson holds a bachelor's and master's degree from the University of Western Ontario and a doctorate from the University of British Columbia. After a postdoctoral fellowship at the University of California, Berkeley, he joined the faculty at SFU in 1996, where he is currently Professor of Behavioral Neuroscience and The Department of Psychology. Content Table 1: Behavioral Neuroscience: Area and Perspectives Part I: Biological Behavioral Basics 2:Functional Neuroanatomy: Nervous System and Behavior 3:Neurophysiology: Generation, Transmission and Integration of Neural Signals 4: Behavioral Chemistry: Neurotransmitters and Neuropharmacology 5:Hormones and Brain Part II: Evolution and Development of the Nervous System 6: Evolution and Development of the Nervous System 6: Evolution and Brain Development : Life-Span Brain Development and Behavior Part III : Perception and Action 8: General Principles of Touch Processing, Touch and Pain 9: Hearing. Vestibular Perception, Taste, and Smell 10:Vision: From Eye to Brain 11: Motor Control and Plasticity Part IV: Regulation and Behavior 12: Sex: Evolutionary, Hormonal, and Neural Basics 13:Homeostasis: Active Regulation of The Inner Environment 14: Biological Rhythm, Sleep, and Dreaming Part V: Emotions and Mental Disorders , Aggression, and Stress 16: Psychopathology: Biological Basis of Behavioral Disorders Part VI: Cognitive Neuroscience 17: Learning and Memory 18: Attention and Higher Cognition 19: Language and Lateral For Students Behavioral Neuroscience Companion website contains a wide range of research and resource review to help students master the material presented in the textbook, as well as coverage of additional topics. For each chapter of the tutorial, the site includes: Chapters of outlines that outline each chapter and link to relevant research questions Visual resumes that refer to all activities and videos, forming a complete overview of each chapter Exploring the questions that help the student master the full range of material in each chapter Animation Videos that illustrate many of the complex, dynamic concepts and processes of biological psychology - Activities that helps the student consider key structures and processes - Online quizzes (including both multiple options and essay questions) Check the understanding of student material, with results stored in an online gradebook (instructor registration required) - Flashcards activities that review and amplify many new terms introduced in each chapter - step on, offering enhanced coverage selected by those that allow students to explore topics more deeply - Glossary, which provides quick access to definitions of all important terminology in the textbook for behavioral neuroscience instructors planning your course, the development of your courses as well as the assessment of your students, including: Figures and tables: All linear illustrations, photos and tables from the textbook are provided by both high-resolution and low-resolution JPEGs, all optimized for use in the presentation program (e.g. PowerPoint) - PowerPoint Resources: For each chapter of the textbook there are two different types of PowerPoint presentations: - All numbers, photos and tables - Full presentation : Video: New for the eighth edition, a robust collection of video segments from the BBC and other sources to bring to life can important concepts discussed in the tutorial. Excellent as lecture-starters and topics to discuss. Animation: These detailed animations help to revitalize lectures and illustrate dynamic processes. - Instructor's Guide - Test Bank Bank David Eagleman, Jonathan Downar Request Inspection Copy of the Second Edition by Neil W. Watson, S. Mark Breedlove Request Inspection Copy Five Edition by Randy J. Nelson, Lance J. Kriegsfeld Request Inspection Copy Of The Third Edition of Scott A. Huettel, Allen W. Song, Gregory McCarthy Request Inspection Copy of the Second Edition of Dale Purves, Kevin, Roberto Cabeza, Scott A. Huettel Request Inspection Copy Fourth Edition by Simon LeVay, Janice Baldwin Request Inspection Copy of second edition by Kevin N. Lalande, Gillian Brown Request Inspection Copy No Login Information is not common between this site and any other site. Your existing www.sinauer.com account, e-book site, or anywhere else won't work here; You must register on this site. Ga naar zoeken Ga naar hoofdinhoud Published by Sinauer Associates, an imprint of Oxford University Publishing House. For 20 years, instructors have relied on a biologic psychology textbook for a definitive and comprehensive study of behavior neuroscience. Thanks to the explosion of work in neuroscience, each of the seven editions includes more neural details than before. So it's time to revise the title to reflect the evolution of both the book and the field: behavioral neuroscience. Behavioral Neuroscience, The Eighth Edition, provides students with a live overview of the area. It offers a wide range of covering cutting edge neuroscience, clear descriptions of behavior, evolutionary and developmental perspectives, and clinical application studies. Despite this comprehensive range of materials, the authors sought in the latest revision to expose the concepts of neuroscience underlying behavior with concussion and clarity. «pdpTaxonomyObj»: «PageInfo»: »pageType»:«PDP»,«язык»:«nl»,«сайт»:«bol.com»,userInfo»:«,«productInfo»:»«productId»:«920000008358493»,«ean»:«9781605570»,название:Поведенческая неврология,цена:50.99,categoryTreeList: дерево: Boeken.Psychologie.Neuropsychologie, кирпич:10000926,chunk:80007266,publisher:Oxford University Press Incавтор:S.
