Your cart is total 0 €, and your order entitles you to a free express delivery. This DNA quantification kit is optimized for Qubit® fluorometer reagent (HS) and measuring range 10 pg/uL–100 ng/uL.The series contains a concentrated QuDye HS analytical reagent, dilution buffer and DNA standards (0 and 10 ng/uL). The determination is selective towards DSDNA (double stranded DNA) for RNA and accurate for the first sample concentrations between 10 pg/uL and 100 ng/uL. The test is carried out at room temperature and the signal is stable for 3 hours. The determination tolerates untaminants such as salts, free nucleotides, detergents or proteins. With this series, reagent and buffer seals can simply be diluted and measurements started. Qubit ® can read samples from about 200 uL. In the sample preparation mixture, 180-199 uL QuDye HS working solutions and 20-1 uL dna samples quantified. QuDye dsDNA HS Assay Kit Manual dsDNA quantification counter Storage conditions: Store at +4 °C. Heat to RT before use. Storage period per month: 12 The item has been added.
