I have a problem in my server, I installed the ppsspp server and server itself is working fine, but it says that the port is already in use and it said me when I type in cmd: C:\Users\Administrator>ppsspp_server Starting PPSPP server Please wait while loading drivers Starting PPSPP server failed The port is C:\Users\Administrator>netstat -a -n -o | findstr port 49152 But my friend tried my server and nothing happened, the server is not working, how can I solve it? A: If you are using Windows, you need to install RTPTPD with the following command: yum install rtptpd You can configure it to run automatically at startup with the following command: rc-update add rtptpd default This will start the server on startup and it will run without showing any error. Q: C# DataGridView Default Values I have a DataGridView that is filled with values retrieved from the database. The values come through as null, but when I get the values using the following code, they come through as empty string. for (int

i = 0; i
