House party apple tv app

Apple tvOS 13, the latest version of Apple TV software, boasts a number of much-requested design changes and features, including a new Control Center, a revamped home screen and multi-user support. But the fun doesn't stop there. There's also an updated Apple Music client that displays lyrics on time with the music, and compatibility with both the PlayStation DualShock 4 Wireless Controller and the Xbox Wireless Controller. Below, let's explain everything you need to know about Apple tvOS13, as well as the universal Apple TV app. Mom, use your own account Despite being one of the most expensive streaming devices on the market, Apple TV has always lacked a feature its cheaper counterparts have long offered: Support for multiple users — and that has annoyed customers since its inception. We can see why. There's nothing worse than starting a new series, pausing to make dinner, then unable to resume viewing when returning because a family member jumped into the app while you slaved away at the stove. However, tvOS allows the entire family to sign in to their own accounts through the new Control Center to get their own personalized recommendations for new shows, movies, and music. They can also resume playback of old ones. Karaoke, meet the Apple TV With a little get-together? Enter Apple Music. More specifically, the revamped Apple Music for tvOS 13, which has a new karaoke mode built in. Sure, that's not what Apple calls it, but take it from us, that's what it's good for. As on iOS, Apple Music for tvOS can now display lyrics synced with the music being played. So, stock up on vodka (or your preferred poison), invite some of your closest friends over, and relive the 80s the only way we know how. Plug and play Apple's tvOS 13 supports two new controllers, namely Microsoft's Xbox Wireless Controller and Sony's PlayStation DualShock 4 Wireless Controller, both of which can be used for titles available through Apple Arcade. That, for the unconscious, is the Cupertino, California-based company's on-demand gaming subscription service and home to more than 100 new and exclusive titles running on Apple TV, iPad, iPhone and Mac. Is that a new home screen? In short: Yes, it's a new home screen. It sports full-screen content previews — leave the cursor on a title for a few seconds and it will start playing the trailer. It's not quite as annoying as the same feature in the Netflix app, but it's close. Thankfully, however, Apple has provided us with a way to disable these automatic previews in tvOS settings — something Netflix steadfastly refuses to do. The new Apple TV app The awkwardly named Apple TV app didn't get much love from people in previous versions of tvOS, but it's about to change — big time. No longer an exclusive feature of the Apple TV device, the TV app is now available on all iOS, iPadOS and MacOS machines (as long as you use the latest versions), plus a growing range of third-party devices such as smart TVs and streaming media players. The new TV app builds on the features of the previous version, allowing customers to access a variety of content within a single experience, but it takes a new approach to how this is done. Using an interface that will feel instantly familiar to Netflix subscribers, the TV app home screen is called Watch Now, with additional screens for categories like movies, kids and sports. Each of these screens includes subsections like Top Next, What to Watch and For You, which makes it easier to find what you're looking for. Apple claims it is using expert human curation to make high-level recommendations, but there are also very personal suggestions made by software on your Apple TV or another device. Multiple apps in one In addition to being able to add a select set of cable and satellite TV providers, as well as live TV streaming services like Spectrum, AT&T TV Now, Optimum, Hulu and Fubo TV — something current TV app users can already do — there are more than 150 additional Apple TV channels to add, all within the TV app's interface. It's a familiar concept and gives viewers more choice over what they want to watch and how much they're willing to pay for it. These channels are the same third-party products — like Starz, HBO, Epix, CBS All Access, and others — that are available on platforms such as Amazon Prime Video. The main difference is to sign up for them (and start free trials if available) all can be done quickly and easily from within the TV app. Apple says there are more than 100,000 titles to choose from if you add all these services up. Of course, Apple's new Apple TV Plus streaming service is one of those options. Notable is Netflix not. Apple devices and more The new TV app is available on Apple devices, but it's also on a comprehensive list of third-party products: Sony Android TV will get it too, which may mean that, eventually, all Android TV devices will also get the Apple TV app, but so far it's not something Apple has confirmed. Is it live or on-demand? The new Apple TV app, much like its predecessor, focuses on providing easy access to on-demand content. Regardless of the source, the various programs and movies can be viewed online or downloaded for later viewing offline, and there are never any ads. Live streaming content lives side by side with on-demand content, but without the benefit of an on-screen guide to help you navigate live streaming TV services. We expect this option will be available at some point because Apple already supports live streaming services like FuboTV, has an optional wizard view. Pricing The new Apple TV app is free to but you still have to pay for much of the content that it's designed to show you. Subscribe to channels done right inside the app, and pricing can vary greatly depending on what you want to watch. Here are some examples, courtesy of Macworld (all prices are monthly fees): Acorn TV (\$6) CBS All Access (\$10) Cinemax (\$10) Comedy Central Now (\$4) CuriosityStream (\$3) Epix (\$6) HBO (\$15) Lifetime Movie Club (\$4) MTV Hits (\$6) PBS Living (\$3) Showtime (\$11) Starz (\$9) This list is not; other channels are available within the TV app. One aspect of channel subscriptions that are likely to rattle some users, is that they are not crossplatform. In other words, if you subscribe to HBO (as an example) in the Apple TV app, it's the only place you can use that subscription. The same is true in reverse order: If you sign up for HBO Now by subscribing directly to HBO, you won't be able to use these credentials to sign in to the HBO channel in the TV app. If the latter arrangement describes your situation, it's not a total deal-breaker as far as the TV app goes — if you have the HBO Now app installed on your Apple TV, the Apple TV app can still promote HBO content to you and even make show recommendations, but when it's time to actually watch an HBO show, you'll be launched to the HBO Now app. Hardly a seamless experience. In addition, the prices listed above — with the sole exception of Acorn TV, are the same price as a direct subscription. As Macworld points out, if you subscribe to Apple's channels, you actually get less flexibility when it comes to viewing options for the same price. Editors recommendations If you have ever downloaded an app on the iPhone or iPad you feel like at home download and re-download apps on the new Apple TV. However, there are some differences that are worth noting. How to download apps on Apple TV The easiest way to download apps on Apple TV is straight from the Featured section. Start the App Store app from the Start screen. On the Featured tab, make sure you're on the Featured tab. Navigate to an app you want to download. Click the app icon. Click Get free (or free with in-app purchases) or the price of paid apps. Click Buy to confirm. If you want to learn more about an app before you decide, you can access the full description. Swipe up to select the description. Click the selected description to see more. Click the menu button on Siri Remote to return to the app page. If you want to get a closer look at screenshots, you can enlarge them too. Swipe down to select a screenshot. Click the selected screenshot to take it full screen. Swipe right or left to switch between screenshots. Click the menu button on Siri Remote to return to the app page. To launch apps on Apple After you download the app app want, you can just start it from your Home screen. Swipe up, down, left, or right on the touchpad to get the app you want to launch. Click the app to launch it. It's so easy! How to re-download apps If you've already purchased an app, or if a developer has made an Apple TV version of one of your iPhone or iPad apps that are available as a universal purchase, you can find them in the Purchased tab. Start the App Store app from the Start screen. Swipe over to the Purchased tab. Navigate to an app you want to download. Click the app icon. Click the Download from iCloud button to recover your purchase. You can also see the extended description and screenshots, in the same way as above, if you want to make sure you really want to download the app again. How to search for apps It's early days on the Apple TV App Store and then there isn't any category or leaderboards to check out yet. This means that if an app isn't in the main featured section, the only way to find it is to search. Start the App Store app from the Start screen. Swipe over to the Search tab. Swipe down to the virtual keyboard. Start entering the name of the app you want to find. Swipe to the app you want to download as soon as you see it. Click the app icon. Click Get free (or free with in-app purchases) or the price of paid apps. Click Buy to confirm. There's also a list of apps that are trending in your search, so if you're looking for a popular app, you can find it there. More about Apple TV apps and games You can also download apps using promo codes, but not directly. And once you've downloaded or re-downloaded an app, you can move it around and even delete it if you want. We can earn a commission for purchases using our links. Learn more. More.
