In addition, this template can be useful for new startups, manufacturing units, or any other small business for cost management purposes. What is a cost sheet? The expenditure sheet represents one-sixth of the periodic accounting document, which is ready to know the results and the gap of expenses for a certain reporting period. It shows different components of the total cost of the product. It will classify and analyze product value components. This document helps in setting the selling price of the product. In other words, bifurcation of the total cost in the form of a statement refers to the cost sheet. The methods of preparing a cost sheet that can be prepared are based on historical costs and estimated costs. Historical value: Historical costs include the actual cost for the past period. Estimated cost: The cost estimate includes pre-production costs. Production. The cost sheet is useful when quoting the tender price of a job or contract. We use financial reporting data to prepare a spending sheet. Thus, the harmonization of spending sheets and financial statements is mandatory on a regular basis. The purpose of the cost sheet is to establish the cost of the product. This sheet will help you fix the selling price of a product or service. Thus, it is also useful in controlling the cost of the product needed for each production unit. It also helps management make important decisions. Solutions such as making changes to a product or raw material, determining prices or saving/replacing an existing machine, etc. Items of the cost sheet there are 5 basic elements of the cost sheet. These elements include basic costs, work costs, production costs, COGS, and sales costs. Prime Prime costs are direct production costs such as labor and raw materials. Indirect costs, such as utilities, shipping costs, etc., will not be included in the cost. Work costs include indirect costs such as utilities, manages wages, shipping costs and other administrative costs that support production. Simply put, the sum of all the following expenses is equal to plant costs or work costs: Plant Lease Electricity charges indirect material costs Other indirect wages of production managers/managers of Other Wage Plant Anddiure Plant Depreciation Factory Production Costs Adding Administrative Costs to Plant Costs equal to production costs. These administrative expenses include office rent, amortization of assets, audit fees, bank fees and other various office expenses. The cost of sold goods (COGS) The value of goods sold is the value of the products sold by a retailer, distributor or manufacturer. This is the amount of money the company spends on its labor, materials and overheads to produce/purchase products that are sold to customers during the year. COGS - Total production cost - Opening of stocks of finished products - Closing of the stocks of finished products. Sales costs are direct and indirect costs for the sale and distribution of manufactured goods. These costs include commissions, sales staff salaries, travel expenses, advertising, shipping costs, sales tax, bad debts, etc. By simply entering the data, you can estimate or calculate the cost with this template. Excel Google Sheets Open Office Calc Click here to download all Excel financial analysis templates Rs 199. Important note: To edit and customize Google's sheet, save the file on Google Drive using the Make a copy from the file menu. In addition, you can download other financial analysis analyses as a business net worth calculator, a sales revenue analysis template, break-even analysis, etc. let's discuss the contents of the template in detail. Contents of Cost Sheet Template Cost Sheet template consists of six major sections: Prime Cost Factory or Works Cost Production Cost Cost of Good Sold (COGS) Cost of Sales and Total Sales Prime Cost Prime cost represents the aggregate of the cost of material consumed, productive wages, and direct expenses. Thus, Prime Cost - Direct Material - Direct Wage - Direct Expenses Where, Direct Material - Acquired Material - Discovery of Material Stocks - Closing Of Material Stocks. The cost of the plant or the cost of the plant's work overheads consist of the cost of indirect material, indirect wages, and indirect costs incurred at the plant. The cost of the plant is also known as the cost of work, production or production costs. Thus, the cost of the factory - the prime cost - overhead plant. Where; Factory overheads - Rent - Wages - Amortization - Other costs associated with the factory. In the manufacturing process, some units are not yet completed at the end of a certain period. These incomplete units are known as incomplete units. Thus, at the time of calculating the cost of the plant, it is necessary to adjust the opening and closing of the stock of works in the process. The cost of adding a manufacturing office and administrative overheads to the cost of the plant or the cost of work gives you the total cost of production. Production costs and plant costs are office and administrative overheads. Where: Office Overheads - Administration and other office-related expenses that will include rent, office expenses, general fees, etc. The cost of goods sold (COGS) All items that the unit produces are not sold during the same period. As a rule, we have a stock of finished products in the opening and at the end of the period. Add the cost of opening up the finished product inventory to the total production cost in the current period. In addition, deduct from it the cost of closing the stock of finished products. COGS - Total production cost - Opening of stocks of finished products - Closing of the stocks of finished products. The cost of sales Adding sales and distribution of overhead costs to COGS will give you the cost of sales. The value of the goods sold and the cost of selling and distributing. Excess sales over the total value is called profit. When the total value exceeds sales, it is called a loss. Add profit to total value. He gets a sales figure. Sales and total value and profit. Benefits of sheet cost This provides a complete gap in production costs that helps the business rein in unnecessary costs. The cost sheet helps to fix the sale price. The cost sheet also helps management determine its production policy. It helps management to present price quotes to their customers, as well as to prepare estimates for tenders. This helps determine the total cost of production as well as the cost of Units. We thank our readers for liking, sharing, and following us on various social media platforms, especially Facebook.
