Team collaboration

Communication + Coordination

CONVERSATIONAL VOICE AI

Workforce Collaboration Landscape

Market Opportunity

Projected 13% CAGR to \$27.8B by 2027

\$14 billion

\$2 Billion

\$20 billion

20k Users| \$200M capital

80% of the global workforce doesn't sit at a desk to do their jobs. Companies with large populations of deskless workers want software that helps these employees become more productive and makes their work experience more pleasant. We believe that this market represents one of the biggest opportunities for entrepreneurs today.

Mobile technology for deskless workforce

Here's the technology employees want.

When asked about the areas of deskless workers' work lives would benefit from more technology, respondents mentioned many things. Interestingly, these areas overlap quite a bit with those that have seen entrepreneurial innovation in the deskbound employee world.

These are the deskless opportunities.

Communication, collaboration, coordination, productivity and convenience. Deskless employees, shift managers and staff, crave engagement and professional development. Addressing these, improves efficiency, culture and will reduce employee turnover.

functionality.

The in-app voice assistant for teams - Nothing like it

Voice is the new UI. It's the new HTML. VoiceBOOK is packed with VoiceTech, STT/ AI/ML and it's conveniently "thumbs free".

Why type when you can just speak?

While there are plenty of ways to take notes on your phone, on paper or in a browser, VoiceBOOK is voice-enabled for speed and convenience.

Created for single or multiple users and for sharing notes asynchronously with workmates or social teams using just your phone and your voice.

Lists

Voice Intents

Using VB Bot and the "Hey VB" intent, user can create/add/edit a shopping list for use on-the-fly.

Shopping list

"Hey VB, add avocados to my grocery list"

NLU will know avocados is produce noting by category

Export

The shopping list or any list can be sorted, edited and exported as a CSV or Excel document.

Tasks | Notes

Voice Intents

Using "Hey VB" to initiate any engagement with the VB Bot, create and assign tasks to any member of the team.

List management

Add/edit/delete, set reminders and create notifications for any team member or members.

Export

The list or notes can be sorted, edited and exported as a CSV or Excel document.

Communication

Chat

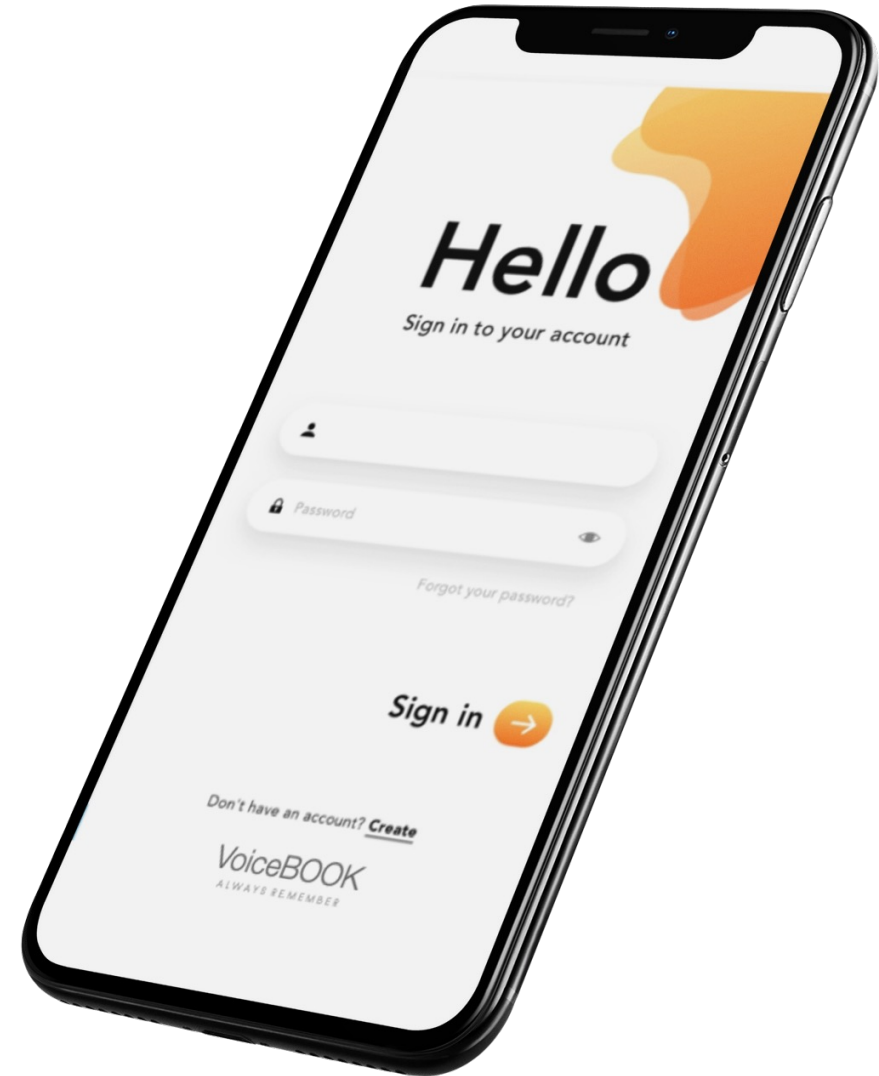

Instant messages are embedded in the journals feeds, and allow DM's and searchable team chat.

Workgroups

Direct messaging works to improve coordination with a single VoiceBOOK app for one-on-one of team chats

Export

Note, chats can be sorted, edited and exported as a CSV or Excel document.

In-app Voice Assistant designed for ease of use.

Restaurant Market

While VoiceBOOK has horizontal application, we begin by targeting the massive restaurant and hospitality sectors with 15.1 million restaurant industry employees in the United States. 1.6 million new restaurant jobs will be created by 2028. The restaurant workforce makes up 10% of the overall U.S. workforce.

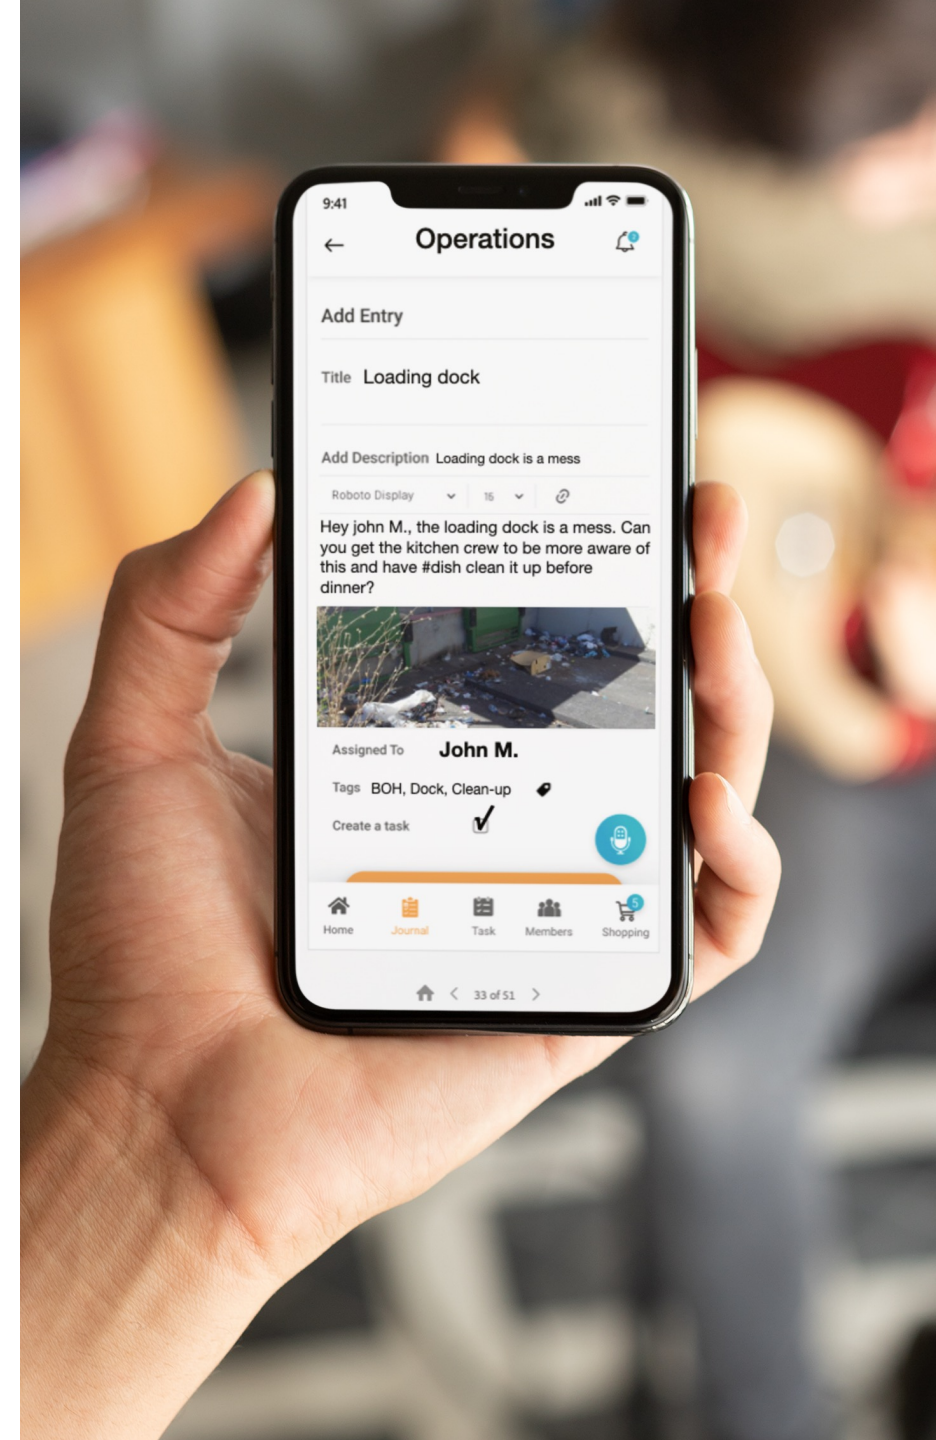

Restaurant managers are time challenged and, on the move, handling a myriad of daily tasks. Effective communication between management teams and staff and is critical to ensure efficiency of operations.

Today

Managers frequently use paper note pads to capture ideas, manage lists and notes throughout their workday. At the end of each shift, they may also document their activities in a shared journal. These written journal entries serve to communicate shift notes, ideas, staff issues and operational metrics with management teams asynchronously. Journals may be analog journal books or digital, using shared documents like Google Documents to record notes, make lists, discuss employee matters, etc.

Tomorrow

Why type or write when you can just talk? More critically, leverage advanced voice, AI, LLM and speech-to-text technology to capture and memorialize restaurant business matters on the fly, using just your voice and a phone.

Restaurant Use Case

- VoiceBook adds digital accountability to unit-level management to stay organized and be more productive.
- VoiceBOOK enables above-store supervisors to easily plan for in-store visits by reviewing relevant VoiceBOOK content asynchronously.
- Managers can assign and view the status of any task, create shopping list and stay on top of their team's shift-to-shift communication, progress and performance over time.
- Admins can search VoiceBook's historical content by location, date, person, value or topic using our restaurant-tuned voice-enabled semantic engine.
- Communicate and translate English to Spanish, Spanish to English.
- Access "at-a-glance" dashboards, connected cloud documents and ability to view pages from any VoiceBOOK, anywhere, at any time.
- VoiceBOOK allows all content to be stored locally or in the cloud, including employee schedules via API.
- Access and share operations procedures, recipes, employee new hire documents, images and video content on the fly.
- Attach photos and videos to any DM, or journal entry.

Open AI -Use Case

1.Virtual Meetings: ChatGPT can be integrated with virtual meeting platforms to provide real-time transcription and summaries of meetings, making it easier for team members to follow along and stay engaged.

2.Group Chat: ChatGPT can be integrated with group chat platforms to provide automated responses to common questions, reducing the workload on team members and improving response times.

3.Knowledge Management: ChatGPT can be used to create and manage a centralized repository of information, making it easier for team members to access the information they need and reducing the time spent on searching for information.

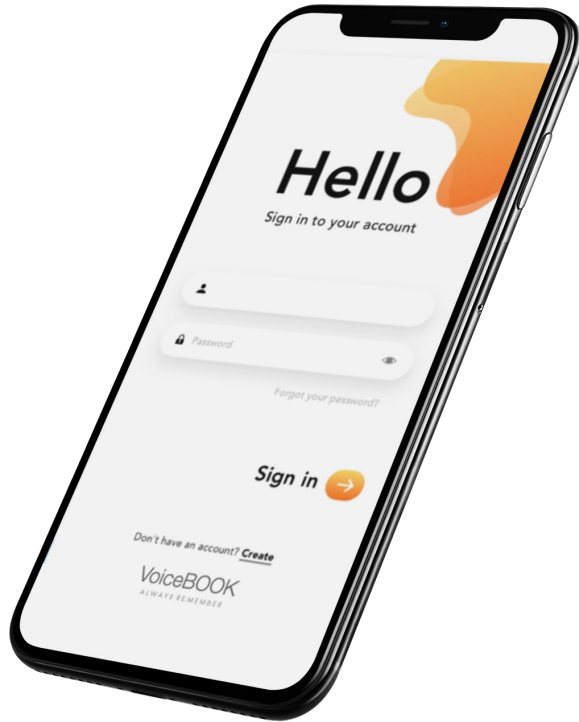

4.Project Management: ChatGPT can be integrated with project management tools to provide real-time updates on project progress and automatically assign tasks to team members based on their availability and expertise.

5.Decision Making: ChatGPT can be used to facilitate team decision-making by providing data-driven insights and recommendations, improving the efficiency and effectiveness of decision-making processes.

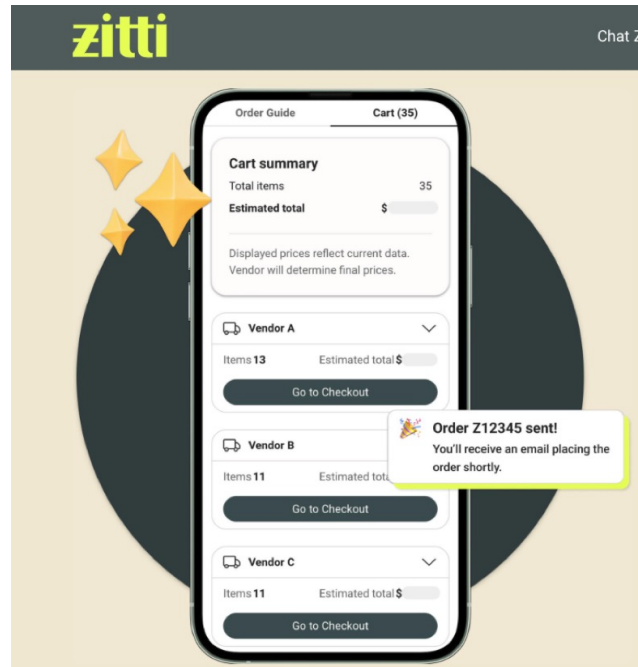

6.Performance Management: ChatGPT can be integrated with performance management systems to provide real-time feedback and coaching to team members, helping to improve performance and keep everyone on track.

CAPITALIZATION

- ✓ **\$1.0 million**
Capitalizing VoiceBook to complete V.1 development and launch to early adopters by Q4 2024. We've already built the app Proof of Concept. Next is full production design and build.
- ✓ **SAFE Note**
Structured as Convertible Equity. Essentially, a SAFE note acts as a legally binding promise to allow an investor to purchase a specified number of shares for an agreed-upon price at some point in the future.
- ✓ **\$6 million Post-Money Cap, 20% discount**
This SAFE is convertible into the anticipated next round of capital.
- ✓ **Use of Funds**
Continued platform and native app development, staff, sales, marketing & G&A.

About Us

VoiceBook is a part of ARI Venture Studio. We are creative, experienced and passionate restaurant operators and technologists with decades of voice, data, search, natural language, online food ordering, entertainment, media, marketing and investment experience; with particular influence in the U.S restaurant market.
