Energol GR-XP 220 is a high-quality industrial transmission oil, extremely pressure-free, with very good thermal strength and high payload capacity. It has been shown that additives formulated in accordance with BP-free phosphorus technology have many advantages over older technologies, especially in the presence of steam. The mixing technique gives the masa excellent anti-corrosion, anti-foam, anti-oumultic and antioxidant properties. Very good viscosity characteristics ensure that the strength of the start is not too great in cold weather. Supplements in this oil are compatible with black and non-ferrous metals used to handle industrial gears.- Wear resistance is good for many gears.- The operation does not need to be visited in between major repairs even at high temperatures and extreme conditions.- Maximum protection against corrosion and abrasions.- Works well even in wet conditions. Packaging: 209 liter drums and 18 liter barrels This oil is prepared for circulating lubricant or hydroliming gears used in industrial straight cylinders, sloping poles and screws. The temperature of the entire oil block should not exceed 120oC. In systems with electric furnaces for rapid heating of oil, it is important to avoid high levels of heating. Heat tokens exceeding 15 kW/m2 (9.5 W/b/b2) can di centrifam additives and thus affect oil lubricant. Energol GR-XP meets the specification requirements of DIN 51517 Part 3, AGMA 250.04 and U.S. Steel Recognized David Brown Industries Ltd., PIV, Sew Usocom.All barrels of oil must be stored under the roof. When containers should be kept outdoors, horizontal drums should be placed to avoid the possibility of rainwater seeping and avoid erasing symbols written on the trunk. It is not recommended to leave the product in places where the temperature is above 60 degrees, do not bask in the hot sun or in cold places. Health, safety and environmental product safety information provides information on the impact of products on the environment, safety and health. This information indicates possible harm during use, precautions and emergencies, environmental consequences, and how to use oil waste. BP Oil Company and its subsidiaries are not liable if the product is not used properly except for regulatory use and does not comply with precautionary measures. Before using the product, in addition to what was sent, you need to have the opinion of the local BP office. Thermal durability and durability of oxidation provide a reliable operation and a longer lifespan than mineral oils. BP ENERSYN SG-XP 220 corrosive-resistant oil gears are good for industrial transmission systems. A high viscosation index helps oil perform well in a wide range of working temperatures. The separation of air and anti-foam exceed the requirements of Flender testing, helping to prevent churning and damage to transmissions. Good water separation and emulsion reduce downtime due to the long life of the oil and the reliable operation of the equipment. Industrial equipment oil based on PAO 220 is well compatible with phosphates, paints and mineral oils.
