Pdf Download.Q: VB.NET, working with COM in a VB6 application I have a working VB6 application in which I want to add a new functionality to it. This new functionality is a COM library with the following interface: [Guid("c09fa9a8-e085-11ce-b593-00aa004a9a66")] public interface IDateTimeProperties { string GetStringProperty(string propertyName); object GetCollectionProperty(string propertyName); object GetSingleProperty(string propertyName); bool SetStringProperty(string propertyName, object value); bool SetCollectionProperty(string propertyName, object collection); bool SetSingleProperty(string propertyName, object value); } Implementation of the above interface is just empty. So I started to implement it in.NET by using the COM Interop tool (vb6toimm). This is the class declaration that I wrote: _ _ Function GetStringProperty(propertyName As String) As Object Function GetCollectionProperty(propertyName As String) 520fdb1ae7
