Find out which classes have the highest DPS for PvE and Raider Capture in BfA Patch 8.2 Introduction We bring you a single target DPS Rating of all damage deal specs available in World of Warcraft Battle for Azeroth. The list is based on simulations and may be different from what you see in Raid and Dungeons game meetings. To simulate the optimal unified purpose of DPS for each specialty, we selected the best talent builds as well as the best available equipment, and optimal raid lineups. To add a little more confidence to the results, we decided to include some raid mechanics that lower overall output damage to our calculations (so, again, this list will be different from the maximum DPS list). Please remember that this list resembles raw numbers, and is based only on calculations, so it doesn't show which class is best for current Raid content, but visualizes how high the output of raw materials from certain classes is. We decided to show DPS in the form of percentages where the highest DPS serves as a benchmark and equals 100% (in our case it is The Improvement Shaman, who tops the charts with more than 30,000 damage per minute), so the differences between each specification are better visible and can be matched easier. Odealo is a safe trading platform for MMO gamers. It is a gamer-driven market for WoW Gold, Elements, and Power Leveling services. The list of DPS 1 specifications. END NOTE This is an early version of our guide and we plan to update on it, so please leave your suggestions in the comments section below. Please remember that this level list is based on raw DPS modeling, and the actual performance of each specification can vary greatly in different encounters and situations. Things like utility, raid buffs, survivability, and mobility have not been taken into account, meaning that the specs above in this list are better at doing damage, but they are not necessarily better than the whole ones than the ones below them.
