How do i get to the boot menu on american megatrends

Gone are the days when Windows systems can only be booted from a CD/DVD. Now, users can simply create a bootable partition on their USB flash drive and use it at the time of needs. If your system has been crashed or is not able to boot in an ideal way, then you can simply change its booting source to a USB drive. In this way, you can easily boot your Windows PC from the attached USB flash drive. Read on and learn how to do the same in two different ways. Method 1. Set the computer to boot from USB drive via BIOS This is the most common way to boot a Windows system from a connected USB drive. Every system has a BIOS (Basic Input Output System) option that users can access. In this way, they can customize the BIOS settings and set the attached USB drive as a primary source for booting. You can access the BIOS options by pressing the BIOS Entry key when the system is turning on. The key can be different from one system to another. Here we can press F12 to enter PhoenixBIOS. Firstly, you need to turn on your computer. If it is already switched on, then you can just restart it. As it would turn on, you need to press the designated BIOS entry key on the keyboard. You might have to press the key a few times to access the BIOS options. Additionally, you can simply view the key on the booting screen as well. Shortly, the BIOS options will appear on the screen. Since your mouse won't work on the interface, you can have to navigate using the allocated keys. Usually, the arrow keys are used to navigate, ENTER to make a selection, and ESC to exit. You can also view the shortcut keys and their allocated jobs at the bottom of the screen. As you can see, the interface has different tabs. Using the arrow keys (left and right), you need to navigate to the "Boot" section. From here, you can see the priority of the sources used by the BIOS. Now, using the + (add) and the – (minus) key, you can set the priority of the Removable Devices at the top. After setting the USB device as the primary booting source, you can save your changes by pressing the F10 key. Just accept the changes and exit the interface by pressing the ESC key. Connect a bootable USB drive to the system and let it be used as a primary source by BIOS. While the approach is the same, the overall interface and the keys can be different from one model to another. Nevertheless, by following these simple steps, you would be able to boot your computer from a USB drive without any trouble. Manufacturer Model BIOS Entry key HP HP and Compaq Desktop PCs (Built-in 2006 or later (came with Vista or Windows 7)) F10 HP HP and Compaq Desktop PCs (Built before 2006 (XP or earlier)) F1 HP HP Notebook PCs F10 DELL Dell Inspiron, Dell Dimension, Dell Precision, Dell Optiplex, Dell Vostro Dell XPS F2 DELL Dell Latitude Fn+F1 Acer Aspire, Power, Veriton, Extensa, Ferrari, TravelMate, Altos DEL or F2 Gateway DX, FX, One, GM, GT, GX, Profile, Astro F1 Gateway Older model F2 Lenovo Lenovo F2 Fujitsu, NEC, Sharp Fujitsu, NEC, Sharp F2 Toshiba Portégé, Satellite, Tecra, Equium F1 or ESC Toshiba Toshiba Equium F12 Shuttle Glamor G-Series, Do, Prima P2-Series, Workstation, X Mini XPC, Surveillance F-1 or DEL Phoenix Phoenix BIOS F2 AMD® (Advanced Micro Devices, Inc.) AMD® (Advanced Micro Devices, Inc.) BIOS F1 Award Award BIOS DEL AMI (American Megatrends, Inc.) AMI (American Megatrends, Inc.) BIOS DEL Method 2. Set computer to boot from USB drive via Boot Option Menu Besides accessing the BIOS user interface, users can directly go to the Boot Options Menu as well. Just like a BIOS Entry Key, most of the systems also have a Boot menu key that can be used to select the primary booting device. Though, before you proceed, you need to ensure your system follows legacy support for booting. Additionally, you should also be familiar with the Boot menu key on your computer. Here are some popular options: Insert the bootable USB drive to the computer and restart the computer. As soon as you will see the company logo on the screen, start pressing the Boot menu key. This will open the Boot menu on the screen. It will display a list of all the devices your system can consider as a booting source. Just select your connected USB and let your computer boot from it. By following these simple solutions, you can easily learn how to boot a computer from a USB drive. You can try either of these options and set the desired booting source for your computer. Go ahead and give it a try. If you face any problem, let us know about it in the comments below. Manufacturer Laptop Desktop computer HP F9 or Esc F12 DELL F12 Esc Acer F12 F12 Lenovo F12 F12 Thinkpad F12 F12 Asus Esc F8 GIGABYTE F12 F12 MSI F11 F11 Samsung F12 F12 Microsoft Surface Pro volume- volume- Sony Esc Esc Toshiba F12 F12 Fujitsu F12 F12 Gateway F12 F12 Download | Win Windows Version Download | Mac Mac Version I am trying to boot a Laptop with the American Megatrends BIOS from a different boot device. The setup shows Boot option priorities "Windows Boot Manager" and "UEFI: Built-in EFI...". There is also an "OS Select" (I) with the options "Windows" and "Linux". But I did not find any option to boot from USB/CD/Lan. What do I need to do? 1. At the bottom of the screen, there is only (I) option and it should state to press 'F1' to continue to bios. 1. Have a keyboard and mouse connected and press F1 on the keyboard. 2. Click 'Boot Menu' or press 'F8'. 3. Select the Windows Boot Manager option. If that option is not available, you may need to check the internal OS drive connections of the server and reseal the cabling. If the server is still not able to boot, please take a further look into these options: This tutorial shows you how to set your computer to boot from USB Flash Drive/Pen Drive via change boot order of devices in AMI BIOS SETUP. Plug in your password recovery disk you have created with USB Flash Drive and set your computer to boot from USB. If your BIOS version is AMI, follow the procedures. It is easy and important. 1. Press F2/Delete (How to Enter Your BIOS SETUP via BIOS Key) as soon as you can while your PC reboots until the BIOS SETUP screen appears. 2. Looking for a tab relating to booting in the BIOS SETUP screen, Select "Boot" menu via use -- / -- key, You'll see a submenu that's specific to the PC Drive boots sequence. Use / / key to highlight "Hard Disk Drives", hit "Enter". 3. Use / / key to select "1st Drive", hit "Enter" key. 4. Go on enter Boot Settings, then see the Boot Device Priority item. 5. Enter Hard Disk Drives. 6. Select "USB: Kingston DTG(2G)" and press "Enter" to set the USB Flash Drive as the first bootable option. 7. Now the USB Flash Drive is the first boot device. 8. Press "F10" to save and exit it, then select "OK" and press "Enter" key, the computer will reboot and boot from USB. BIOS (which is an acronym for Basic Input/Output System) is your computer's firmware, the base-level software that helps control your hardware. Accessing BIOS can be necessary at times, and this is usually a very easy thing to do. However, if you've tried the basic BIOS access steps and still can't get in, the information here may help you. Our first suggestion would be to take a look at one or both of these lists of BIOS access keys: Every computer's motherboard has a BIOS manufacturer, so if neither of the above resources helps, this list of BIOS access keyboard commands based on the original manufacturer should get you in without a problem. Nenov / Moment / Getty Images As your computer boots up, look for one of the following manufacturers to flash on the screen. The name usually appears as a logo in the top-left corner or as text at the very bottom of the screen. After verifying the creator of the BIOS on your system, reference the following list and use the appropriate keyboard command to access the utility. If you're not sure what the BIOS name is and can't seem to find it during a reboot, see the section at the bottom of this article for more help with this. AMIBIOS, AMI BIOS Press Del after powering on the computer.Some older motherboards that use AMI BIOS may prompt for the F1 or F2 key instead. AwardBIOS, Award BIOS Press the Del key to enter the BIOS Setup Utility on nearly all AwardBIOS powered motherboards.Some older systems using Award's BIOS software asked for Ctrl+Alt+Esc. DTK BIOS Press the Esc key, right after powering on the PC. Insyde BIOS Press F2.If there's an error during POST and you hear a beep code or see an error message, press F1 instead (F2 addresses the POST error in this scenario, and doesn't launch the BIOS setup utility). MR BIOS Press F1 to access the utility. Phoenix BIOS, Phoenix-Award BIOS Press Del during the POST, immediately after the computer starts.Many older Phoenix BIOS systems required Ctrl+Alt+Esc, Ctrl+Alt+Ins, or Ctrl+Alt+S. If you haven't found the BIOS manufacturer of your system, and you can't see that information when you reboot, there are a few other methods for finding this information. One easy method is to use a system information tool. Most of those programs include that information. Another way to find the BIOS manufacturer that doesn't require a software download is to look in the System Information tool included in Windows. See our guide on checking the current BIOS version for help, which includes not only the version but also the BIOS manufacturer. In that guide, you'll also find some alternative methods for finding out BIOS information, such as using a BIOS update tool or the Windows Registry If you're still having trouble entering BIOS or can't figure out what company supplied the BIOS on your motherboard, here are some keyboard commands you might want to randomly try: F3F4F10F12TabEscCtrl+Alt+F3Ctrl+Alt+DelCtrl+Alt+Shift+Del (using Del from the keypad)Ctrl+InsertCtrl+Shift+EscFn+[]any "F" function key[] (on some laptops) Thanks for letting us know! Tell us why!
