LOGGING IN

- 1) Connect your wallet
- 2) Click "Next"

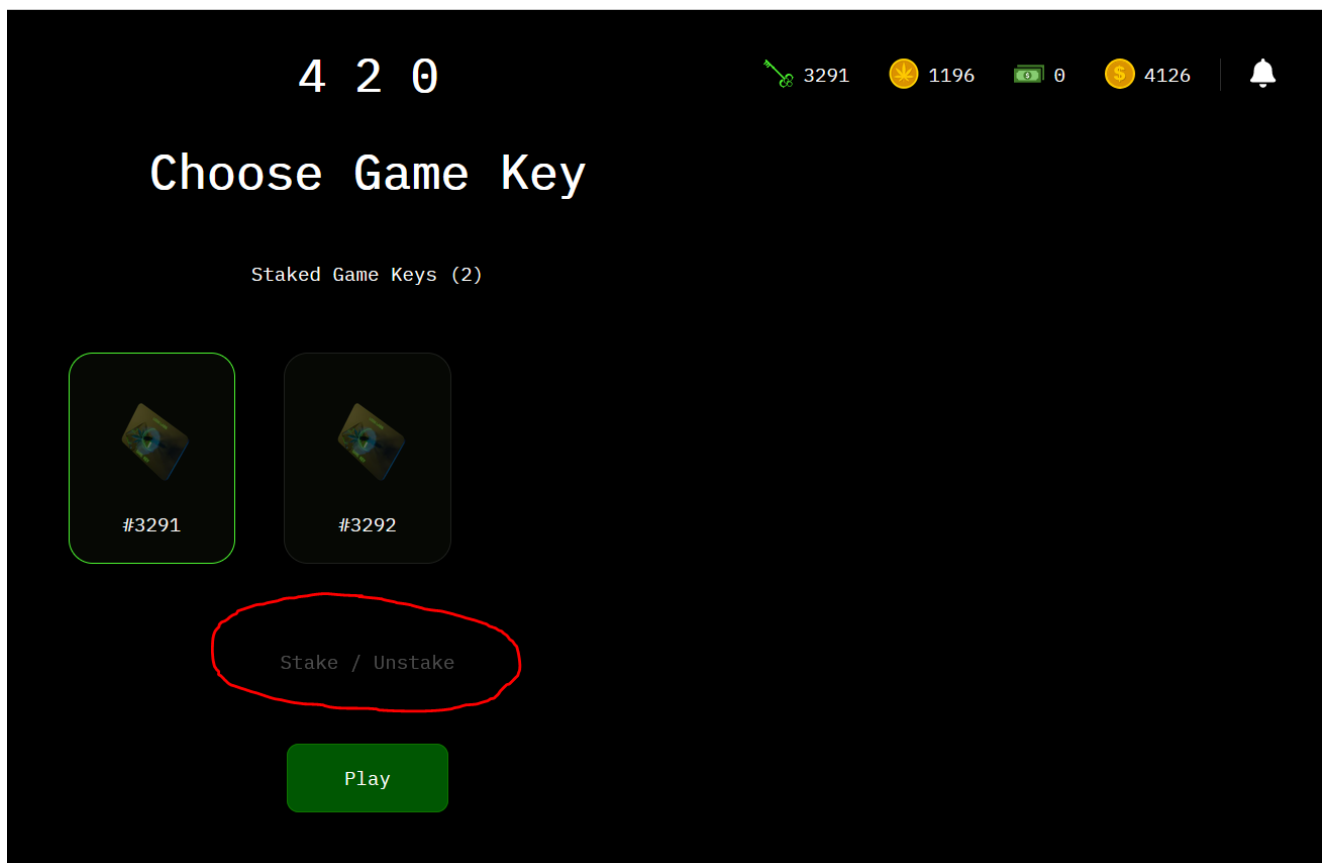

SETTING UP BREEDING – STAKING A GAME KEY

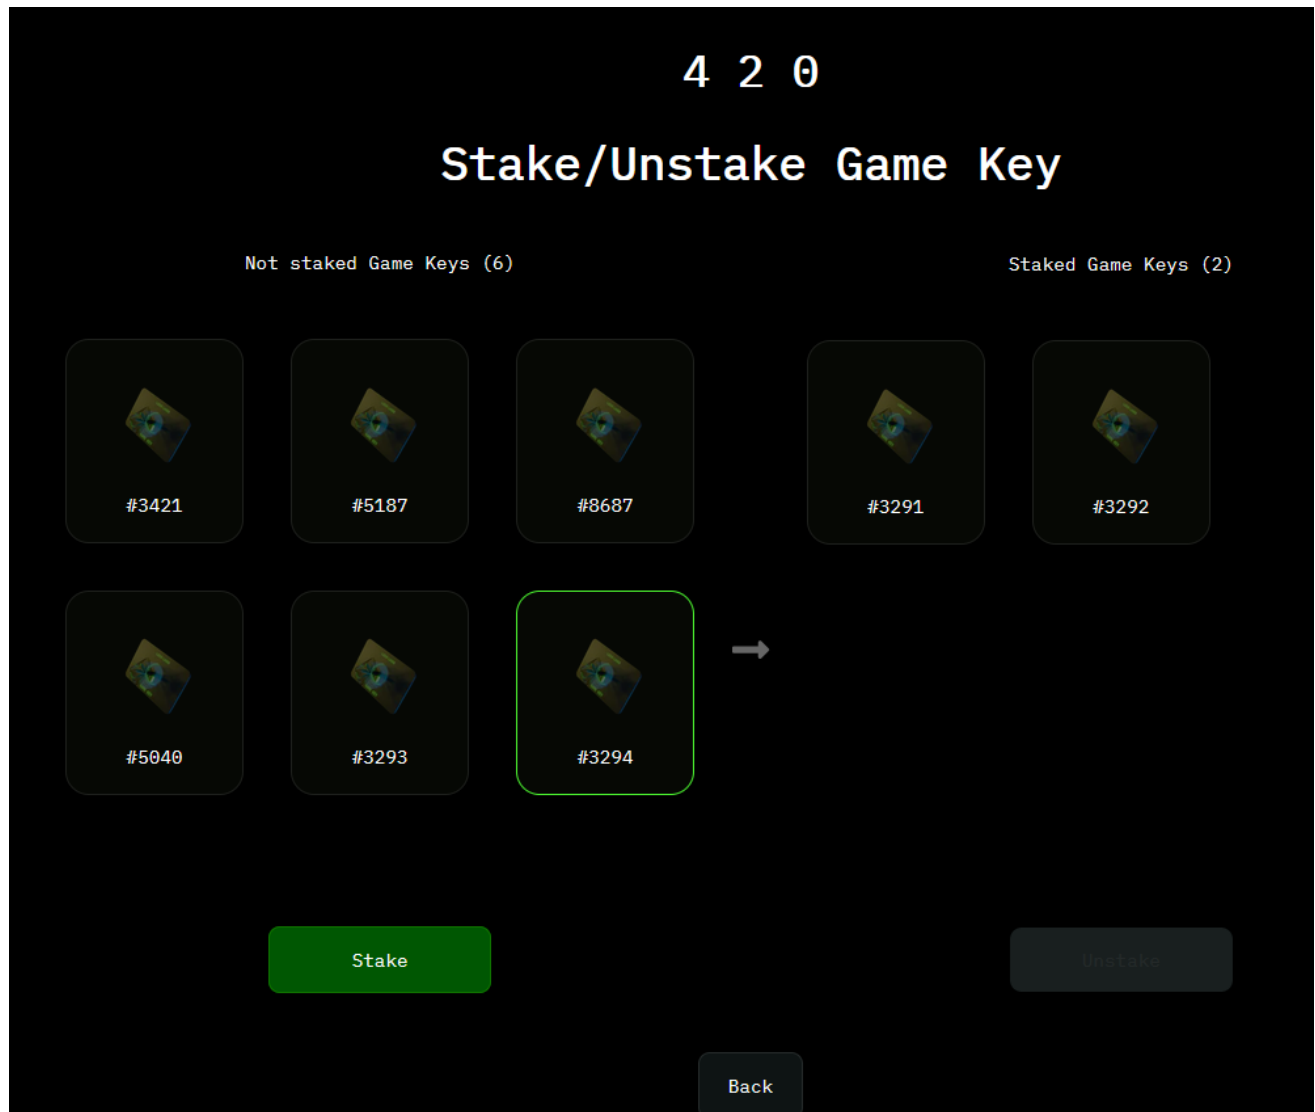

- 1) Before you can play the 420 Game, you need to have at least one Game Key staked.
- 2) Please note that you can always return to this page by selecting the Key icon at the top of the page.

- 3) Each Game Key can hold up to five breeding pairs, so you might need more than one if you want to breed all of your pairs simultaneously.

- 4) Select which Game Key you want to stake (there is no option to bulk stake).
- 5) Click "Stake"
- 6) Staking (or unstaking) will require gas, so approve the subsequent transaction that appears in Metamask and your hardware wallet if using one.

SETTING UP BREEDING – UNSTAKING YOUR BUDS

- 1) Most people have had their buds staked and accruing \$HIGH for some time. Before you can begin breeding your buds, you will need to unstake them. Please note that they cannot accrue \$HIGH while unstaked, so you might want to leave some staked while you breed with others.
- 2) Click “Unstake”

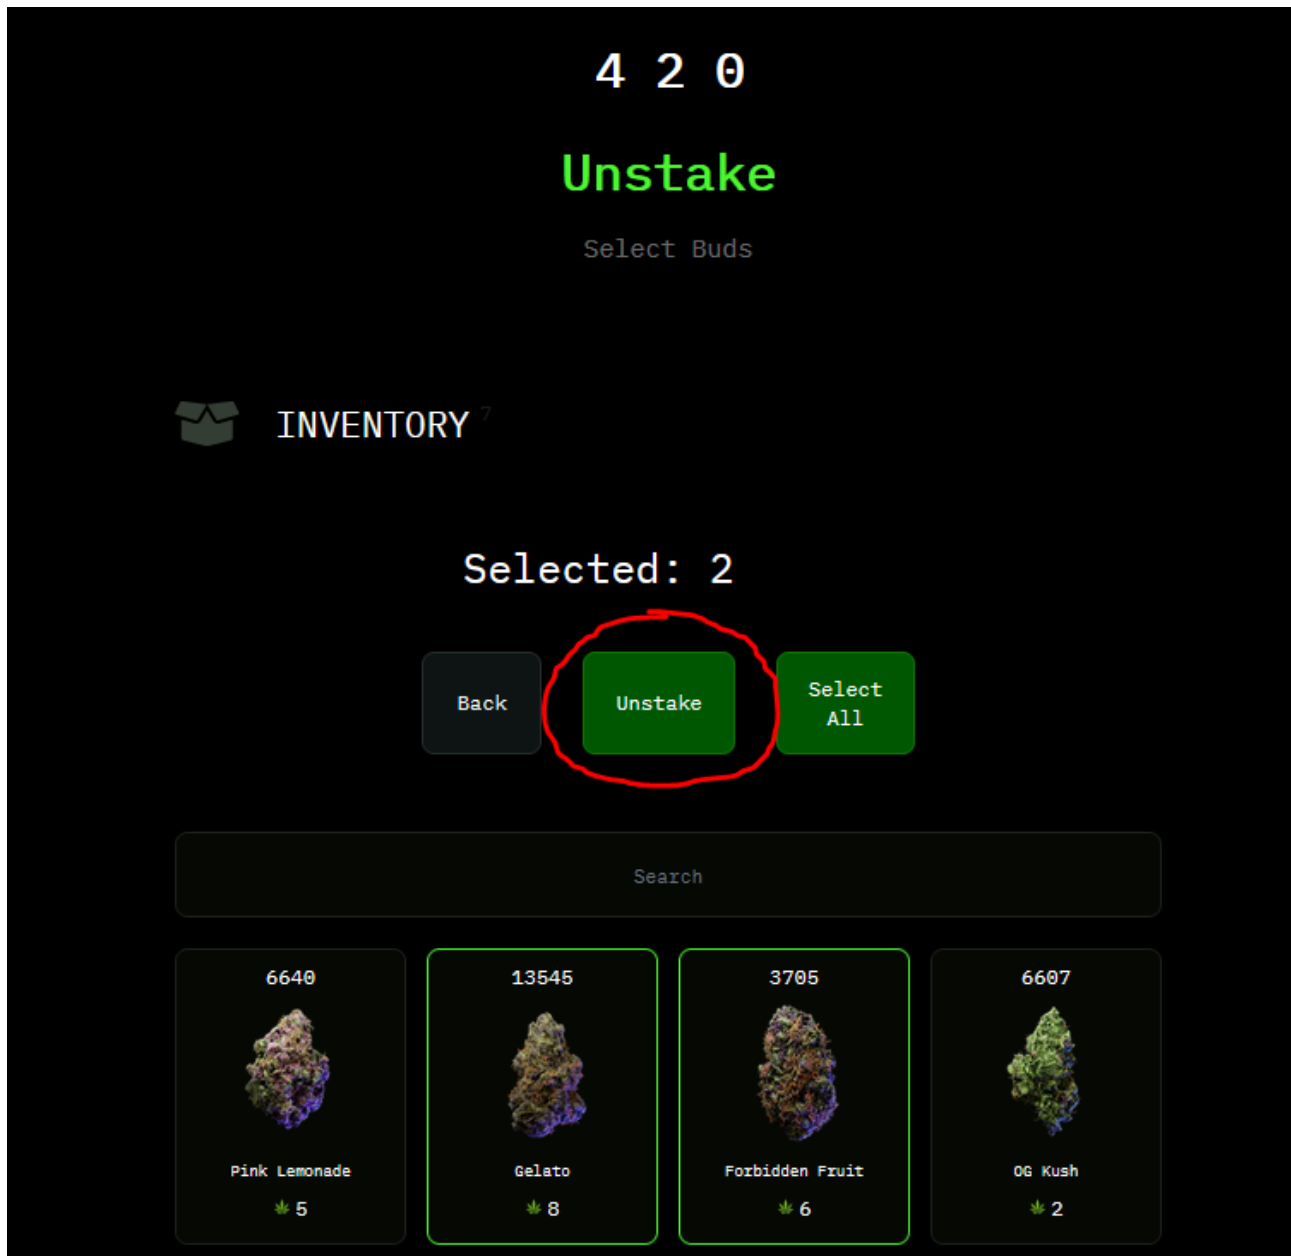

The screenshot displays the 'Staking' section of the 420 Game interface. At the top, the game logo '4 2 0' is visible, along with a user profile icon and the number '3291'. Below the logo are navigation tabs: 'Staking', 'Breeding', 'Shop', and 'Inventory'. The 'Staking' tab is selected, and the title 'Staking' is prominently displayed, followed by the subtitle 'Yielding sweet sweet \$HIGH'.

The '\$HIGH Overview' section contains six data cards arranged in a 3x2 grid:

- Yield per day:** \$22.8 \$HIGH tokens
- Balance:** \$4142.6491 \$HIGH tokens
- Staked:** 7 Buds
- Unstaked:** 0 Buds
- Staked per GK:** 7 Buds
- Unrevealed:** 0 Buds

At the bottom of the overview section are two buttons: a green 'STAKE' button and a grey 'UNSTAKE' button. The 'UNSTAKE' button is circled in red, indicating the action to be taken.

- 3) On the subsequent page, you will see all buds that you have currently staked.
- 4) Select the buds that you want to unstake.
- 5) Click "Unstake"
- 6) Just like with the Game Keys, staking (or unstaking) buds will require gas, so approve the subsequent transaction that appears in Metamask and your hardware wallet if using one.

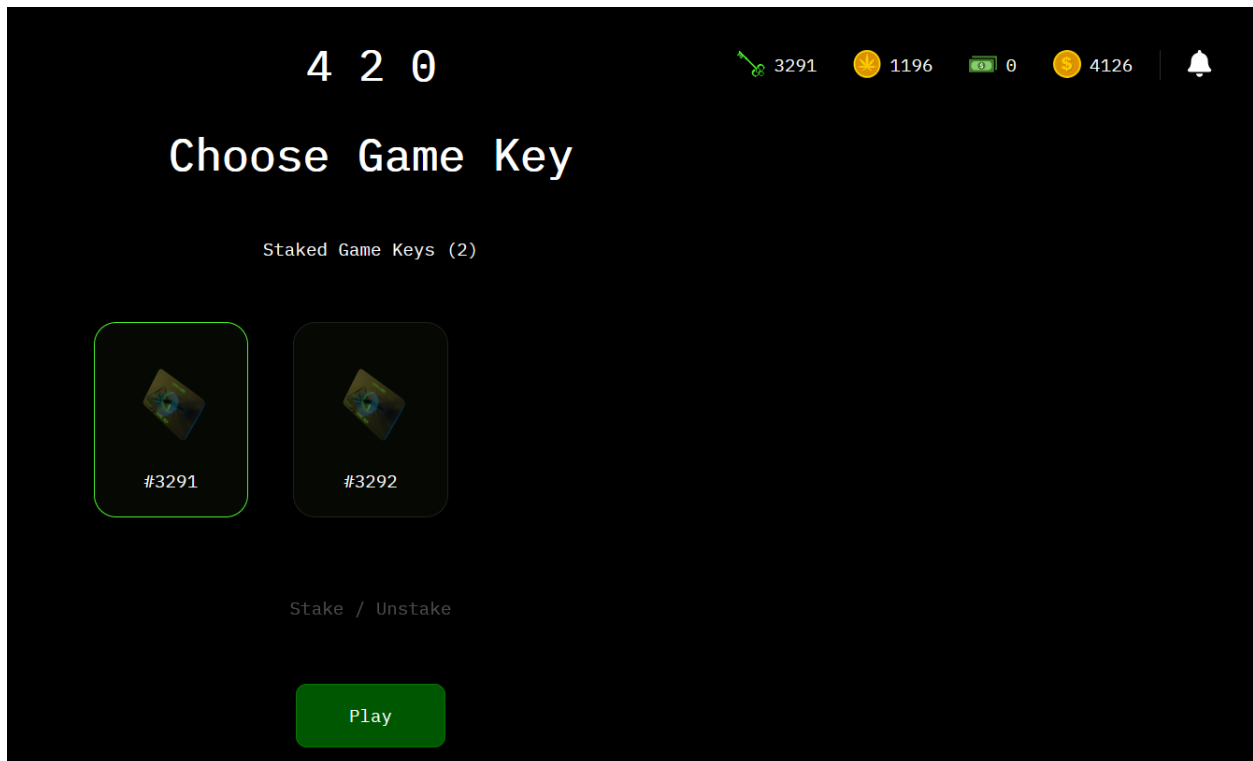

SETTING UP BREEDING – OBTAINING BREEDING POINTS

- 1) The last step before you can breed your buds is to convert some of your \$HIGH into breeding points. This is currently a single-direction transaction, so you will not be able to convert breeding points back into \$HIGH yet. This will be changed later.
- 2) Select the source of your \$HIGH.
- 3) Enter the amount of \$HIGH that you want to convert.
- 4) Click “Convert”
- 5) This transaction also requires gas, so approve the subsequent transaction that appears in Metamask and your hardware wallet if using one.

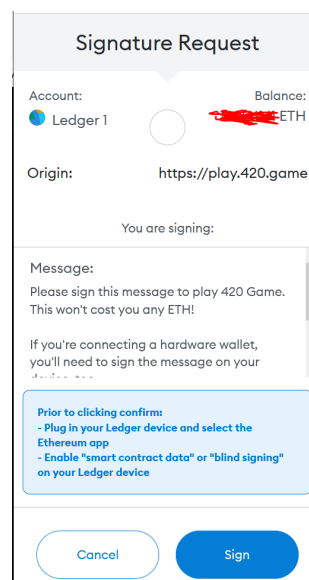

The screenshot shows a dark-themed interface for converting \$HIGH to Breeding Points. At the top, the score '4 2 0' is displayed. The title 'Convert \$HIGH to Breeding Points' is centered, with a note below it: '- Maximum convertible amount is \$9999 -'. There are two input fields: one for '\$HIGH' showing '- 2000' with a balance of 4126, and one for 'Breeding points' showing '2000' with a balance of 1196. Below these is a 'Source:' section with three radio buttons: 'Bud Staking' (checked), 'OG staking', and 'Wallet'. At the bottom, there are two green buttons: 'CONVERT' (circled in red) and 'Breed'.

PLAYING THE GAME – UPGRADING LAND (OPTIONAL)

- 1) Navigate back to the Game Key selection screen.
- 2) Select the Game Key that you want to upgrade land upon.
- 3) Click “Play”

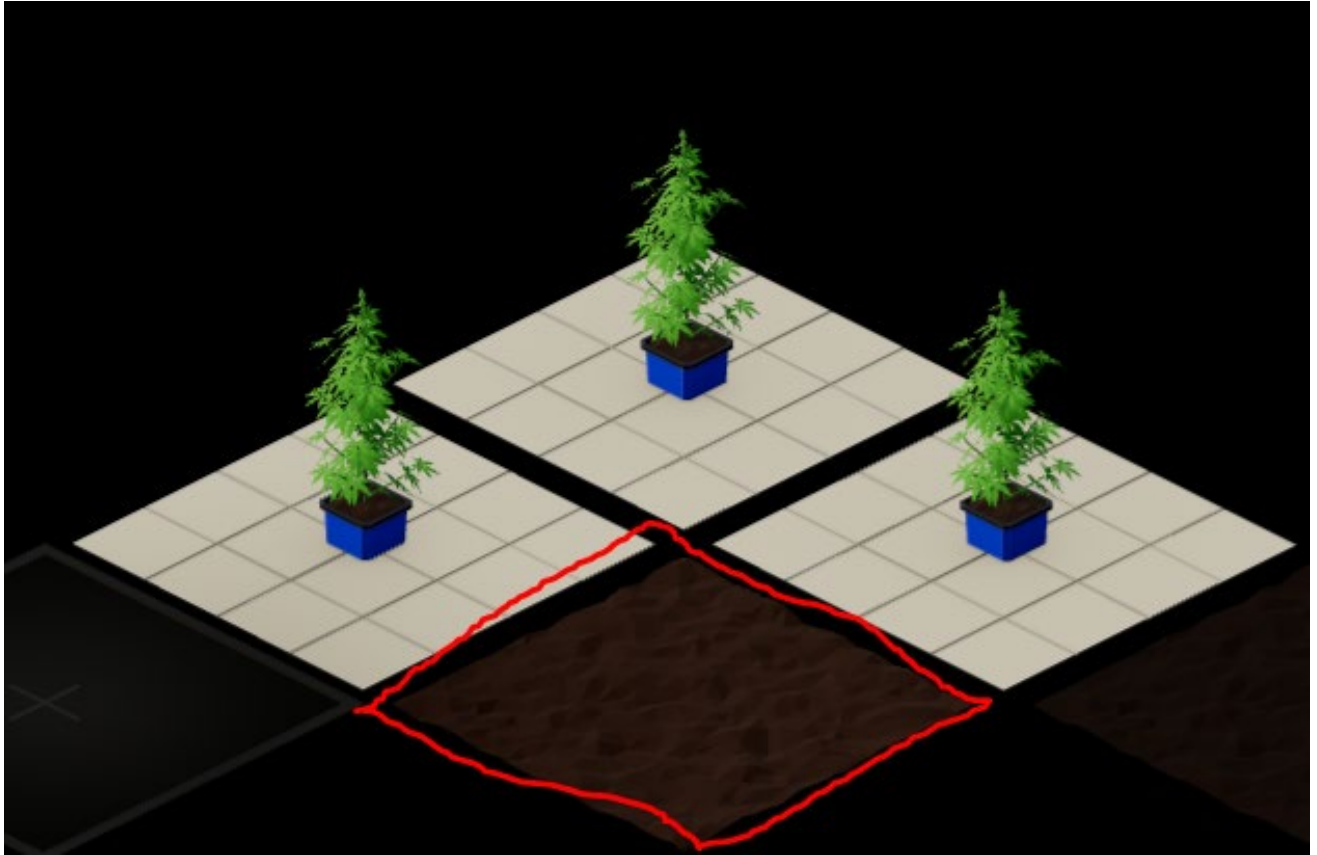

- 4) You will then be asked to sign a message so that you can continue playing. If you are playing from a hardware wallet, as shown here, you will have to approve the transaction in both Metamask and your hardware wallet. This is a gas-less transaction.

- 5) Select "Breeding" on the next screen.
- 6) Each Game Key starts with one standard "Outdoor" plot of land available. With this Game Key, you can see that there are two additional slots already purchased and all three lands were upgraded to "Indoors" and breeding was started in each.
- 7) To get a new slot, select one of the available areas and then click "Buy"
- 8) This is a gas-less transaction within the game, so you will not need to approve anything, and the 42 Breeding Points will automatically be deducted from your balance.

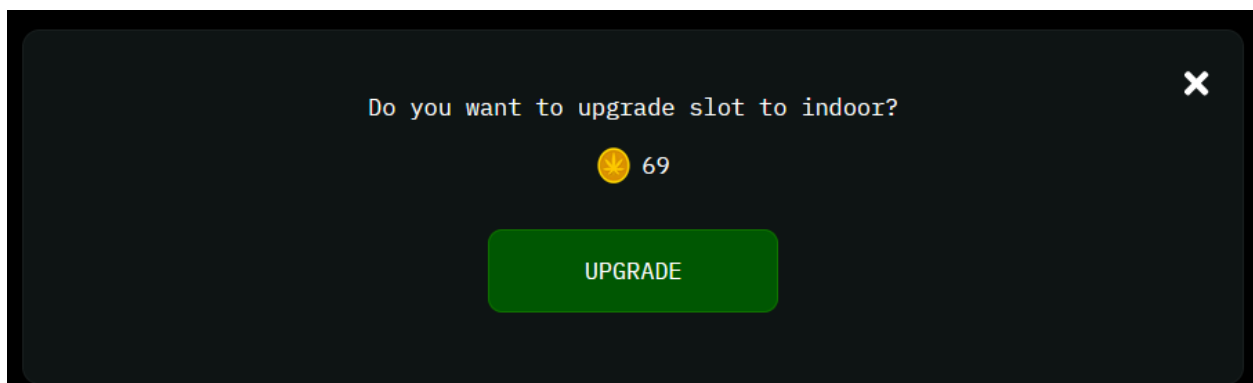

- 9) You now have unlocked the fourth plot of land on this Game Key, and each unlocked plot defaults to “Outdoors” until it is upgraded.

- 10) You can now choose to either breed “Outdoors” or upgrade to “Indoors.” Please note that upgrading is completely optional as Gen 1 buds can be grown outdoors, but this will slightly boost your chances.

- 11) Click “Upgrade to Indoors”
12) A pop-up will appear and click “Upgrade”

- 13) This is another gas-less transaction.

PLAYING THE GAME – INITIAL BREEDING CYCLE

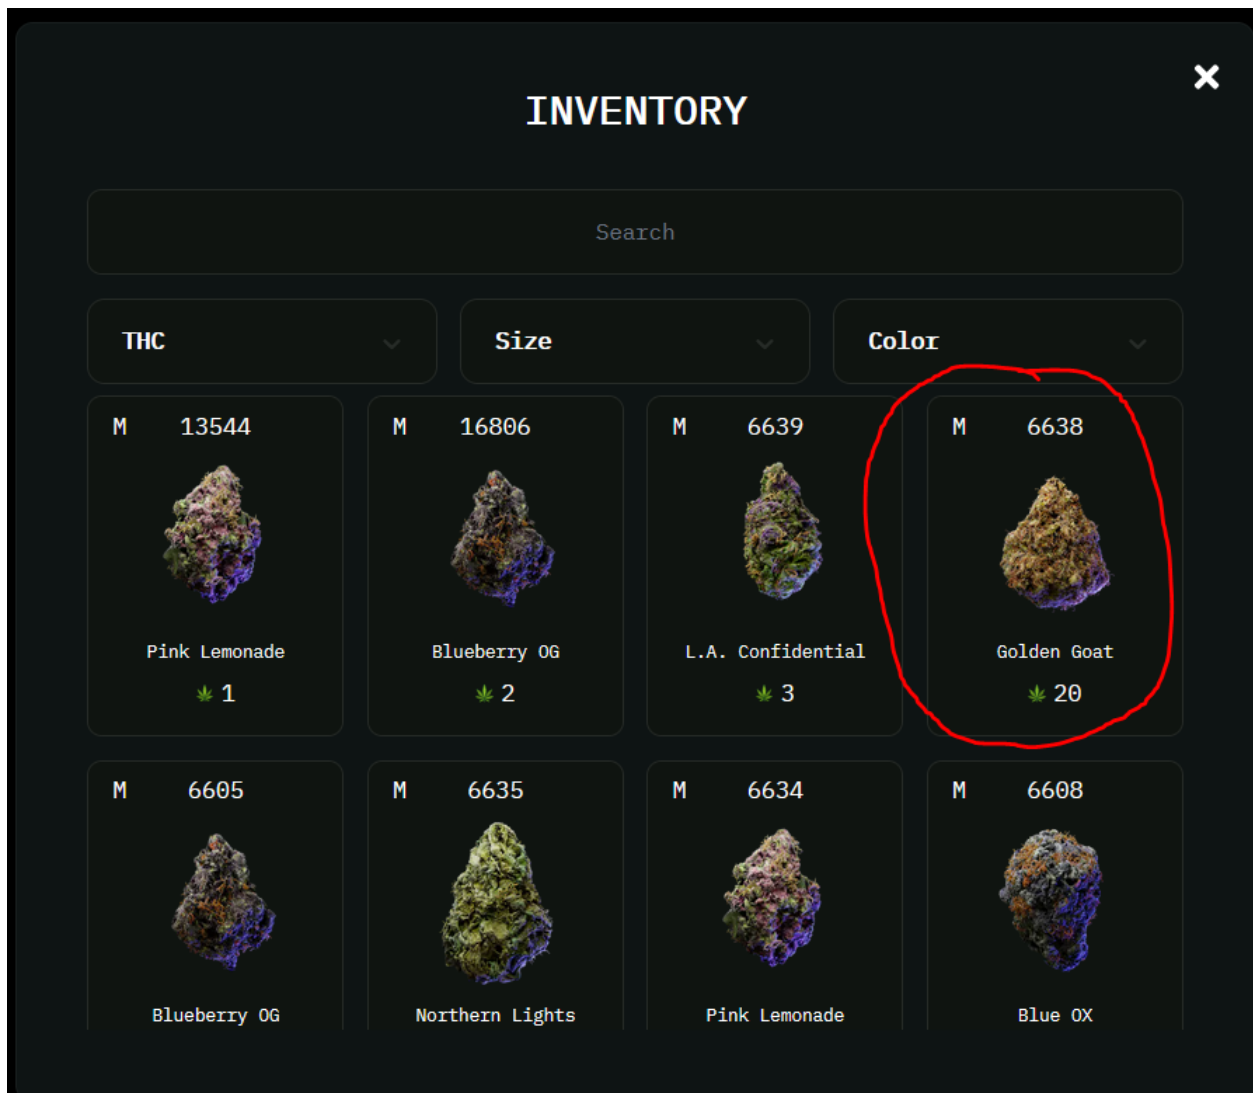

- 1) Now that we have upgraded, click “Grow Indoors.”

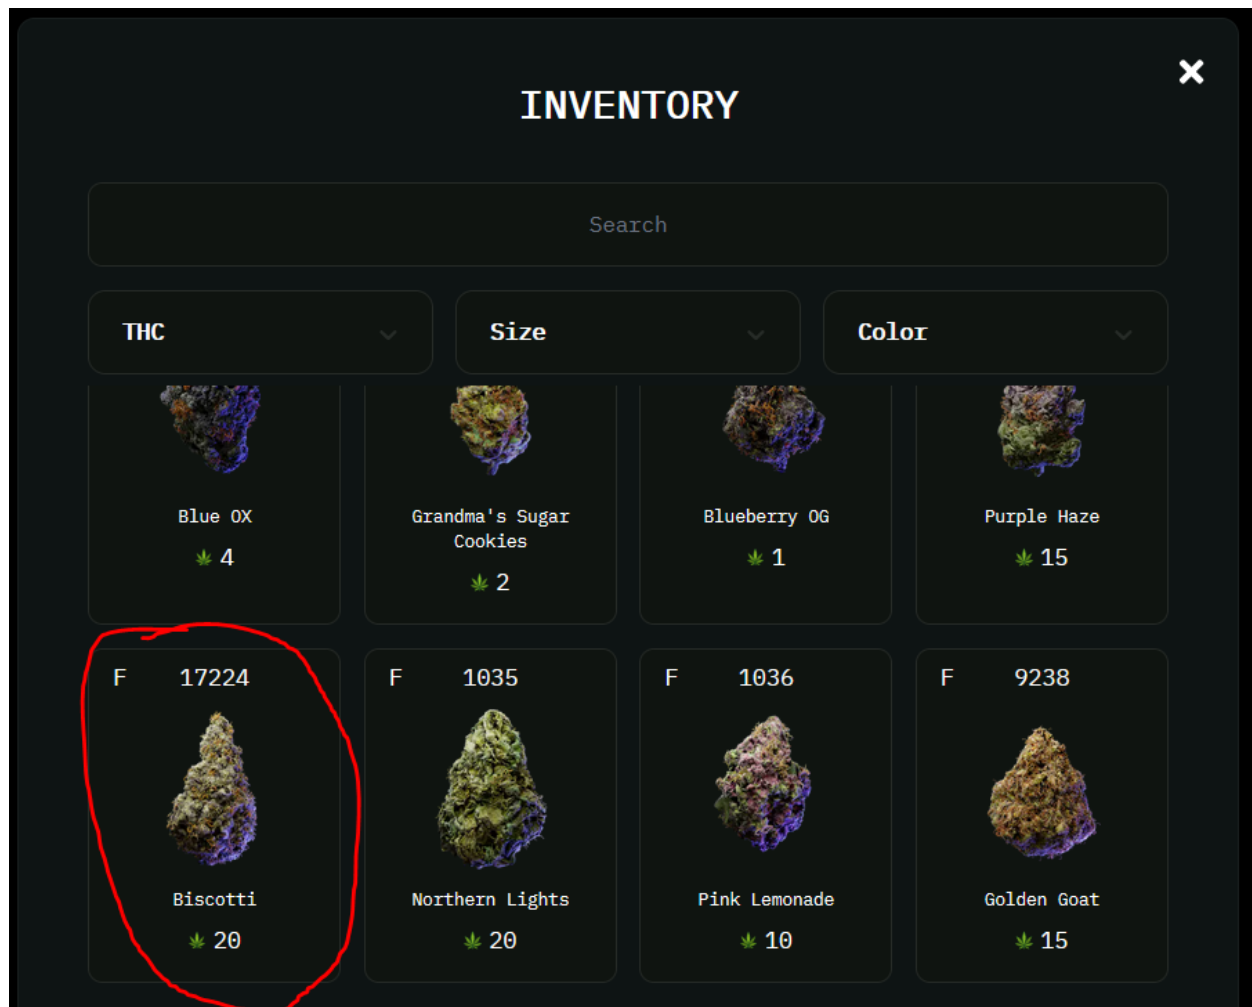

- 2) Select the appropriate male bud that you want to grow with the appropriate female bud.

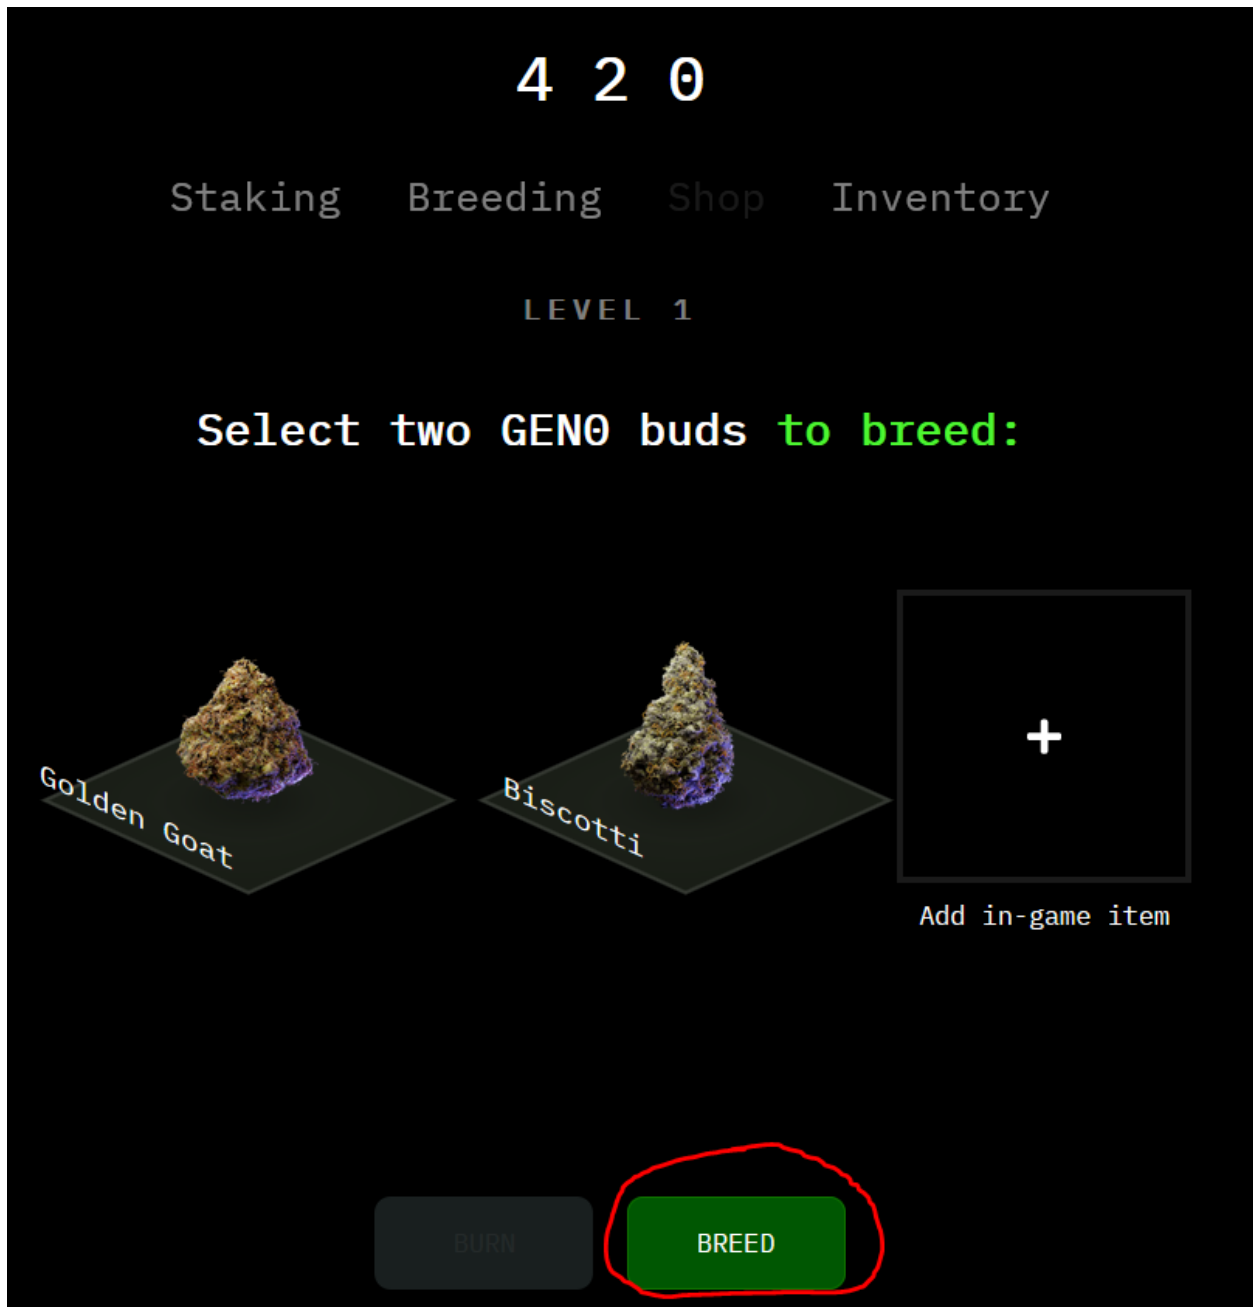

3) Here, I will first select my male bud.

4) Then I follow this by selecting my female bud.

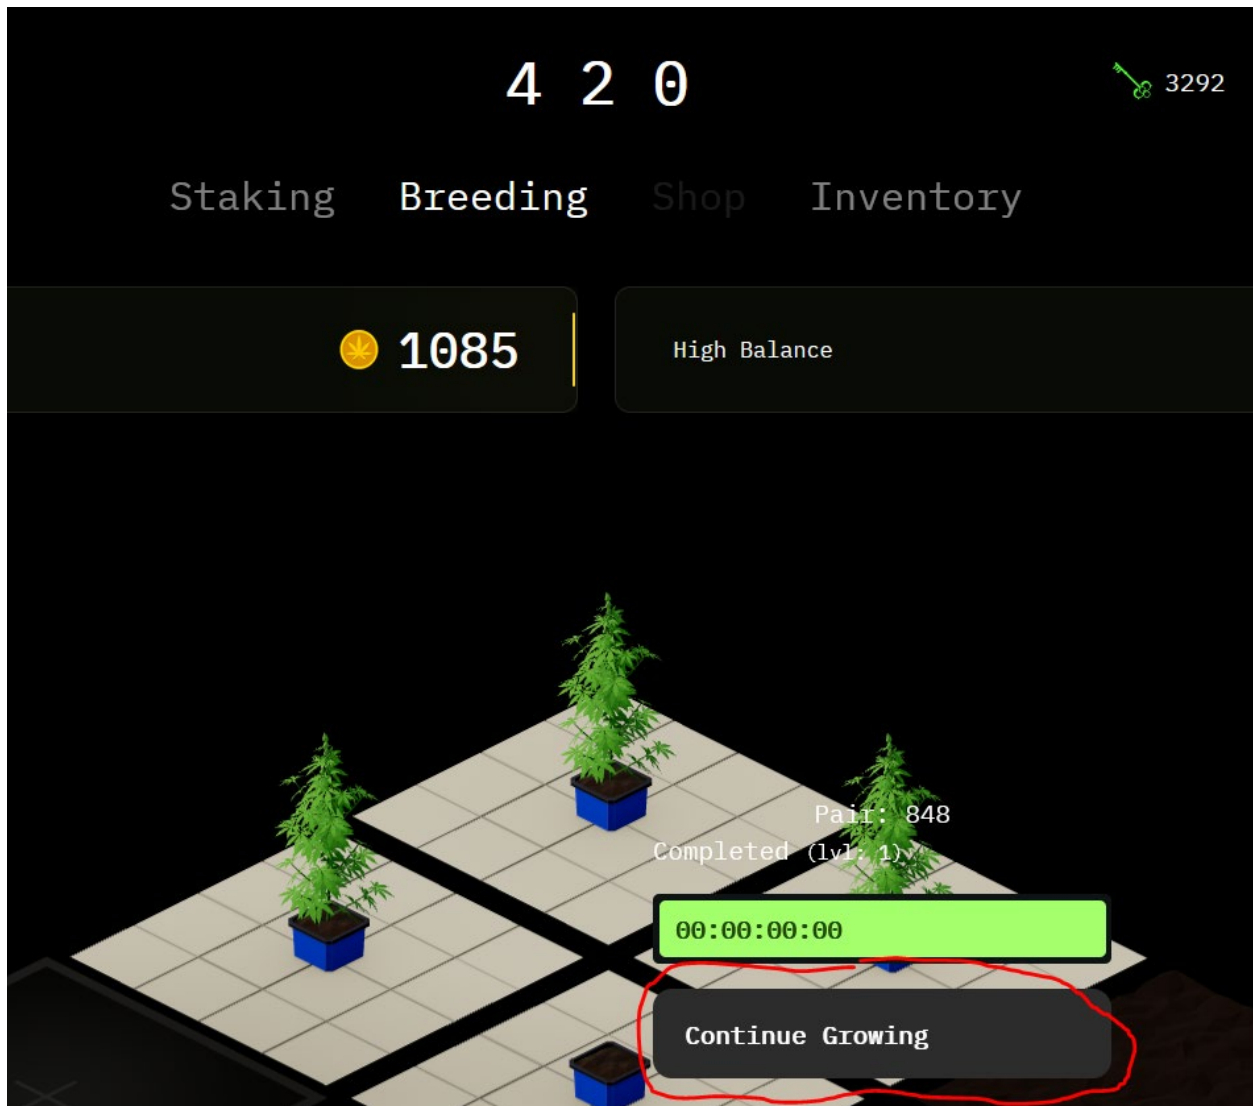

- 5) In game items will be added later, so do not worry about these for now. Thus, now I can proceed with breeding.
- 6) This is another gas-less transaction.

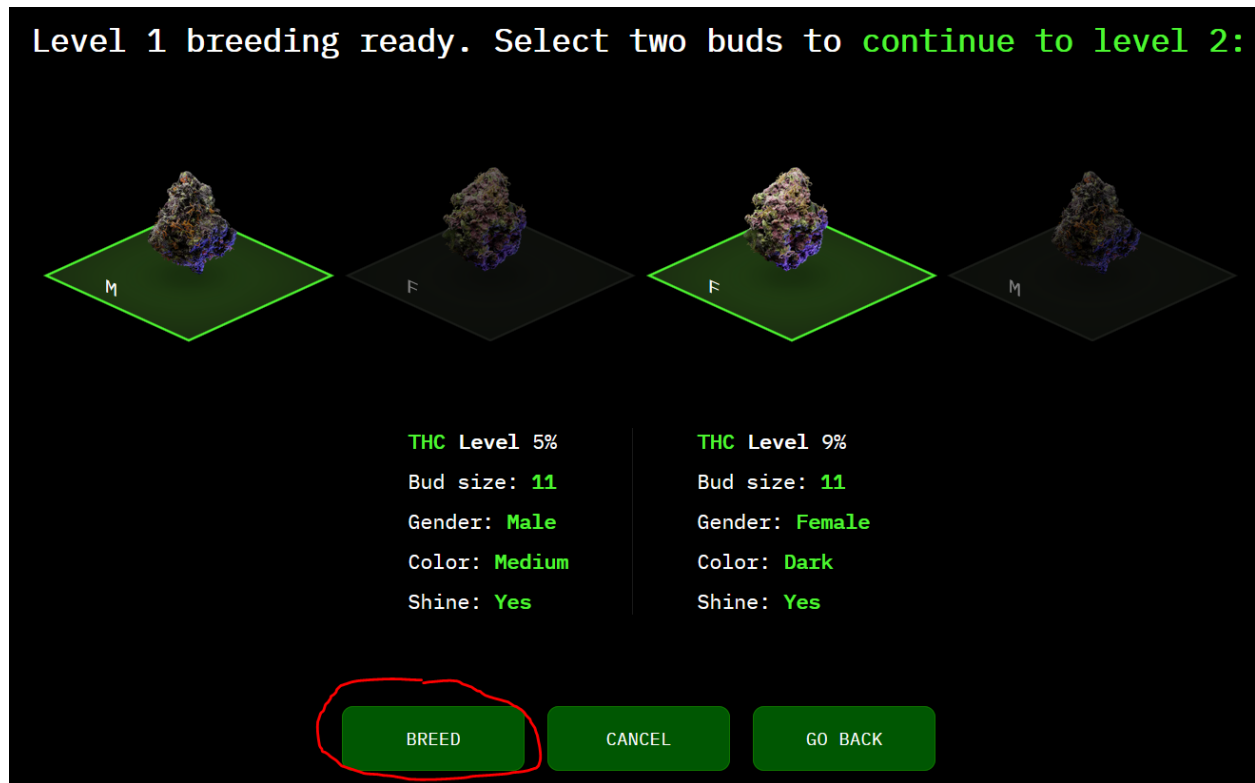

PLAYING THE GAME – SUBSEQUENT BREEDING CYCLES

- 1) After the 24 hours have passed, navigate back to the Breeding screen.
- 2) Select the plot of land that you want to breed upon
- 3) Click “Continue Growing”

- 4) Select the new Male and Female pair that you want to breed in this cycle.
- 5) Click "Breed"

CHEAT SHEETS

1) Transactions

Transaction	Requires Wallet Signature	Gas	Gas-less
Converting \$HIGH to Breeding Points	X	X	
Staking Buds	X	X	
Unstaking Buds	X	X	
Staking a Game Key	X	X	
Unstaking a Game Key	X	X	
Selecting a Game Key	X		X
